INTERNATIONAL DICTIONARY. First Published January 15, 1891.

Reprinted 1892, 1894 Revised 1897.

New Edition, with Supplement of New Words, 1902.

Reprinted 1903.

NOTE.

The circulation of this Edition in Australasia is prolibited by the Owners of the Copyright, and any one found with a copy in his possession will render himself hable to have it confiscated.

PREFACE TO THE ENGLISH EDITION.

The first or original cilition of Webster vlugo or Unshridaed Dictionary was published in two volumes quarto in the year 1828, and was sold largely by subscription

The second edition, 1810 somewhat enlarged and revied by the author, was published in two volumes royal octavo

to which a supplement was added in 1813

After the death of Dr Webster in 1943, the un old remainder of this edition and the copyright of the work were purchased by the predecessors of the present proprietors, who immediately took measures to prepare and issue a new and royled cultion in a single volume in small quirto. This edition was edited by Profes or Chaunco, \ Goodrich, the son in law of Dr Webster, who had proviously superintended the preparation of an abridged edition of the one mail quarto Dr Goodrich had an able corps of assistants, and the new edition of 1847 was received with general favour

In 18.0 an edition was published which included important supplementary matter and a large number of pictorial illustrations The general popularity and acknowledged excellence of this edition suggested the opportunity and enforced the duty of a thorough revision of the entire wark Arrangements were made for such a revision and the work was be un by Profes or Coodrich and a hody of assistants The a arrangements were o scripped disturbed by his death as to require important readjustments, as the result of which the writer rejuctantly consented to act as editor in chief, and Mr William A Wheeler hecame the assistant and actin, either, having proviously given abundant oridence of his pre eminent qualifications for this office. The etymologies were all revi ed and recast in the light of modern philology by Dr C A F Mahn, of Berlin The definitions were rewrought and rearranged and greatly condensed and improved by the combined efforts of Professors William D Whitney and Daniel C Gilman Many fresh examples of the meanings and uses of worls were introduced from older and more recent writers. Sometific terms were more generally recognized and extendly defined, and thou meanings were often illustrated for the eye as well as for the mind. By this means the new dictionary from hong the driest became the most attractive volume in multitudes of hou cholds. Valuable tables were furnished in the appendix conspicuous among which was the Explanators Vocabulary of the Names of Acted Fictitious

I croons and Pheos, which was propered by Mr Wheeler

The general excellence of this edition of 1864 was contailly and nuncerally recognized, and both contributors and publishers own a debt of gratitude to the many friends who have since been so just and so how rous in their criticisms and Their activity and care did not terminate with the origination and publication of the bulky volume for which they had become reaponable They have always held themselves ready to beton to suggestions, and to correct mistakes, whether trors of matter or strores of the press. They have been prompt to accumulate and practice over description of matters at Prores of the press. They have been prompt to accumulate and practice over description instead which might be available for future use. From material thus gathered they were able to publish a valuable suppliment in the year 1879, which was eithed by Protessor Franklin B Dexter

In the same year a more formal beginning was made in the preparation of the edition which is now completed and will be known as the Revision of 1890. It would seem on the one hand that the revision and emen lation of a work so eats factors as the edition of 1864 would be the least expensive of time and attention | Ind jet it has been proved on the can accord as the detinance 1864 would be the least expensive of times and attention. And jet it has been proved on the other hand by one expensives that no work may be made so expensive of both times and therefy as that involved in careful varidation conduction, and adjustment. It is beloved that no dictionary of the English language yet completed has cost more palantaking in these particulars than the present edition. Much of the care thus expended may leave little trace on this punied page indeed, no trace of any kind except of satisfaction in the mand of the entired and consecutions editor. The condensation which becomes Imperative from the incree of lumna knowledge may often seem to shirted and contract the product is provided to the contraction of the condensation which becomes Imperative from the incree of lumna knowledge may often seem to shirted and contract the product is a which the reader looks for amplitude of statement, proof, and illustration and yet even an interest the product is a supplied to the contraction of the product Unabridged Dictionary has its limits The task of adjustment is often the most difficult of all, although it may show the least of the careful attention which it has cost All the e and other difficulties can only be exercised by the employment for many years of a large number of trained assistants in the office who have devoted them elves to literary research and Yerbal criticism and of a corps of specialists who have made original contributions in Science and the Arts nance given to the definitions and litustrations of selectific technological and recological terms will attract the attention of every reader and perhaps check the displeasure of many critics. While we sympathize with their regret that so much Space is given to explanations and illustrations that are purely technical rather than theremy no find ourselves compelled to yold to the necessity which in these days requires that the dictionary which is ever at hand should enrefully define the terms that record the discoveries of Secheno the transplays of Invention, and the ro-clatures of Lift. We have spaced to prains to make this part of our book as perfect as possible in both text and illustration. In the unpertaint department of Litymology the excellent work of the instriction has been supervised and readjusted to the domands of modern Philology and recent by Professor Edward S Sheddon of Harnad University. As a matter of Culture and the contract of th

curions and to a few readers of matructive interest the cumment Professor August 1 ick, of the University of Guttingen has prepared a solicitable of radicals of important English words, with the various forms which they have taken in their

historical development

The important department of Pronunciation has been committed to the special direction of the Roverend Samuel V Britains and Professor Samuel Peters of the National Deaf Mato College Va. hington, DC Mr Baraum has made to study of English pronunciation almost a life work harmy been transed under 1 roles or Goodrich in the special way.

exact knowledge of the subject in its details, and having made himself familiar with the teachings of the leading writers in English Orthocpy. Professor Porter contributes, in the Guido to Pronunciation, the result of a careful and long-continued study of Phonology in the physiological method pursued by Mr. Alexander Melville Bell, whose system in its more prominent features is accepted as scientifically true and practically useful. The history of the various methods of pronunciation has been subject to a most careful revision and rendered, if possible, more trustworthy than ever before. The Synopsis (§ 277) of words differently pronounced by different Orthocpists, and the marking of the pronunciation of the words in the vocabulary by respelling, are the work of Mr. Bannun.

The definitions in Austoiny have been revised by Professor Sidney I. Smith, of Yale University; In Architecture and the Fine Arts, by Professor, Russell Stingle, of the College of New York;

In Biology and Physiology, by Professor Russell II. Chrittenden, of Yule University;

In Botany, by Professor Daniel C Eaton, of Yale University;

In Chancel (Canterbury Tales), by Professor Thomas R. Lounsbury, of Yale University;

In Chemistry, by Professor Arthur W. Wright, of Yalo University, assisted by Professor Charles S. Palmer, University of Colorado;

In Law, by Francis Wharton (deceased), of the Department of State at Washington; In Mathematics and Astronomy, by Professor Hubert A. Newton, of Yale University;

In Mechanics and Engineering, by Professor Charles B. Richards, of Yale University, and Professor William P. Trowbridge, of Columbia College;

In Medicine, by Alexander Duane, M.D., New York;

In Mineralogy and Geology, by Professor Edward S. Dana, of Yale University;

In Music, by Mr John S Dwight, of Boston;

In Nantical Terms, by Mr. Charles L. Norton, of New York;

In Paleontology and Geology, by Professor Oscar L. Harger (deceased), of Yale University;

In Zoology, by Professor Addison E. Verrill, of Yule University;

The Dictionary of Noted Names of Fiction has been carefully elaborated by Professor Henry A. Beers, of Yale University, who has also contributed many new topics and corrected some oversights, and in many ways increased its attractiveness.

The Brief History of the English Language, originally prepared by Professor James Hadley, has been earefully

revised and brought down to the present time by Mr. Georgo Lyman Kittredge, of Harvard University.

The Pictorial Illustrations have received eareful attention, not only in respect to artistic excellence, but in respect to

The Revision now given to the public is the fruit of over ten years of work by a large editorial stuff, in which publishers and editors have spared neither expense nor pains to produce a comprehensive, accurate, and symmetrical work

As a matter of historical interest, the prefaces of the principal earlier editions are appended in their chronological order.

NOAH PORTER.

November, 1890.

PUBLISHERS' NOTE TO THE NEW EDITION OF 1902.

The English language is ten years older than when Websten's International Dictionary was published. They have been years of swift movement, social, industrial, and intellectual, and there has been a corresponding growth in the language. The publishers have aimed, in the Supplement now added, to gather the harvest which this decade has produced. The purpose has been to apply the principles which shaped the character of the original book, as stated above, to the new material brought by advancing years. There has been the same survey and scrutiny of a great mass of words, the same eareful selection of such as merit a place of permanence, and the same studious and thereugh explication of meanings in the forms best suited to the consulter's needs. In this continuation, as in the main work, there has been a distinct avoidance of the multiplication of word titles merely to outboast other lexicons, and the studied retention of such words only as have real use and value.

In the execution of this work the publishers have been fortunate in securing the services, as editor-in-chief, of Dr. W. T. Harris, United States Commissioner of Education. It is needless to dwell on the broad and various scholarship, the exactness and lucidity of mental habit, and the strong interest in lexicography, which eminently qualify Dr. Harrisfor this work. The enthusiasm and devotion with which he has applied himself to the work are shown by the fact that he has not merely given his judgment and study to perfecting the main outlines, but has closely revised the whole, line

by line, first in the copy and again in the proofs.

The matter of the Supplement has been prepared by a carefully chosen office staff, assisted by the contributions of a large number of experts in special fields. We invite attention to a list of these specialists in the Editor's Preface, and in their high standing in their various departments will be found a guarantee of the trustworthiness of the work on its scientific side. All of these gentlemen have not only prepared the original definitions of the terms in their respective provinces, but have examined the revision of the definitions by the office editors, in manuscript, and yet again in the proofs

With this thorough treatment of the scientific part of the vocabulary the character of the literary element will, it is believed, be found to correspond. In the Supplement, as in the original work, the aim has been to combine the soundest scholarship with a discriminating recognition of every-day usage, and to present the whole in forms of such clearness, practicality, and convenience as shall make the book serve all purposes necessary in the best possible way.

A large number of changes and additions, made necessary by the advance in knowledge, have also been introduced

in the body of the book in this odition.

a member of the cenncil, to have "done more to allay popular discontent, and support the muthority of Congress at this erisis, than any other man ?

These occurrences in his native State, together with the distress and stagnation of business in the whole country, resulting from the want of power in Congress to carry its measures into effect, and to secure to the people the benefits of a stable government, convinced Mr Webster that the old Confederation, after the dangers of the war were past, was utterly inadequate to the necessities of the people He therefore published a pamplilet, in the winter of 1784-85, entitled " Sketches of American Policu." in which, after treating of the general principles of government, he endeavored to prove that it was absolutely necessary, for the welfare and safety of the United States, to establish a new system of government, which should act not on the States, but directly on individuals, and rest in Congress full power to carry its laws into effect. Being on a journey to the Southern States, in May, 1785, he went to Mount Vernon, and presented a copy of this pamphlot to General Washington It contained, the writer believes, the first distinct proposal, made through the medium of the press, for a new Constitution of the United States.

One object of Mr Webster's journey to the South was, to potition the State legislatures for the enactment of a law securing to authors an exclusive right to the publication of their writings. In this he succeeded to a considerable extent; and the public attention was thus called to a provision for the support of American literature, which was rendered more effectual by a general copyright law, enacted by Congress soon after the formation of our government At n much later period (in the years 1830-31), Mr. Webster passed a winter at Washington, with the single view of endeavoring to procure an alteration of the existing law, which should extend the term of copyright, and thus give a more ample reward to the labors of our artists and literary men. In this design he succeeded, and an act was passed more liberal in its provisions than the former law, though less so than the laws of some Eurepean govern-

ments on this subject

On his return from the South, Mr Webster spent the summer of 1785 at Baltimore, and employed his time in preparing a course of lectures on the English languago, which were delivered, during the year 1786, in the principal Atlantic cities, and were published in 1789, in an octavo volume, with the title of "Dissertations on the English Language"

The year 1787 was spent by Mr. Webster at Philadelphia, as superintendent of an Episcopal academy. The convention which framed the present Constitution of the United States were in session at Philadelphia during a part of this year; and when their labors were closed, Mr Webster was selicited by Mr. Fitzsimmens, one of the members, to give the aid of his pen in recommending the new system of government to the people Ho accordingly wrote a pamphlet on this subject, entitled an Examination of the Leading Principles of the Federal Constitution."

In 1788, Mr Webster attempted to establish a periodical in New York, and for one year published the "American Magazine," which, however, failed of success; as did also an attempt to combine the efforts of other gentlemen in a similar undertaking. The country was not yet prepared

for such a work

In 1789, when the prospects of business became more encouraging, after the adoption of the new Constitution, Mr. Webster settled lumself at Hartford in the practice of the law Here he formed or renewed an acquaintance with a number of young men just entering upon life, who were ardently devoted, like himself, to literary pursuits may be mentioned his two classmates, Barlow and Wolcott, Trumbull, anthor of McFingal, Richard Alsop; Dr. Lemnel Hopkins; and, though somewhat older, the Rev. Nathan Strong, pastor of the First Cougregational Church, who, in common with the three last mentioned, was highly distinguished for the penetration of his intellect and the keenness of his The incessant contact of such minds at the forming period of their progress had great influence on the literary habits of them all in after It gave them a solid and manly east of thought, a simplicity of taste, a directness of statement, a freedom from all affectation and exnberunce of imagery or diction, which are often best acquired by the salutary use of ridicule, in the action and reaction on each other of keen and penetrating minds It had, likewise, n powerful influence on the social circles in which they moved; and the biographer of Governor Wolcott has justly remarked, that at this time "few cities in the Union could boast of a more enlivated or intelligent society than Hartford, whether

In the autumn of the same year, encouraged by the prospect of increasing business, Mr Webster married the daughter of William Greenleaf, Esq, of Boston, a lady of a highly cultivated intellect, and of great elegance and grace of manners. His friend Trimbull speaks of this event in one of his letters to Wolcott, who was then at New York, in his characteristic vein of humor. "Webster has returned, and brought with him a very pretty wife. I wish him success; but I doubt, in the present decay of business in our profession, whether his profits will enable him to keep up the style he sets out with. I fear he will breakfast upon Institutes, dine upon Dissertations, and go to bed supperless." The result, however, was more favor-ble than it appeared in the sportive anticipa-tions of Trimbell. Mr. Webster found his business profitable, and conturnally mercusing, during his residence of some years in the practice of the law at Hartford.

This omployment he was induced to relinquish, in 1793, by an interesting crisis in public affairs General Washington's celebrated proclamation of neutrality, rendered necessary by the efforts of the French minister. Genot, to raise troops in our country for the invasion of Louisiana, and to fit out privateers against nations at peace with the United States. had called forth the most butter reproaches of the partisans of France, and it was even doubtful, for a time, whether the unbounded popularity of the FATHER OF HIS COUNTRY could repress the pubbe effervescence in favor of embarking in the wars of the French revolution. In this state of things, Mr. Webster was strongly scheited to give the support of his pen to the measures of the administration, by establishing a daily paper in the city of New York. Though conscious of the sacrifice of personal case which he was called upon to make, he was so strongly impressed with the dangers of the crisis, and so entirely devoted to the principles of Washington, that he did not hesitate to accede to the proposal. Removing lus family to Now York, in November, 1703, he commenced a daily paper, under the title of the "Minerva," and afterward a semi-weekly paper, with that of the "Herald"—names which were subsequently changed to those of the "Commercial Advertiser," and "New York Spectator." This was the first example of a paper for the country, composed of the columns of a daily paper, without recomposition - a practice which has now become very common In addition to his labors as sole editor of these papers, Mr. Webster published, in the year 1791, a pamphlet which had a very extensive circulation, entitled "The Revolution in France.

The publication of the treaty negotiated with Great Britain by Mr. Jay, in 1795, aroused an opposition to its ratification of so violent a nature as to stagger for a timo the firmness of Washington, and to threaten eivil commotions. Mr. Webster, in common with General Hamilton and some of the ablest men of the country, came out in vindication of the treaty. Under the signature of Currius, he published a series of papers, which were very extensively reprinted throughout the country, and afterward collected by a bookseller of Philadelphia in a pamphlet form. Of these, ten were centributed by himself, and two by Mr., afterward Chancellei, As an evidence of their effect, it may not be improper to state, that Mr. Rufus King expressed his opinion to Mr Jay, that the essays of Currius had contributed more than any other papers of the same kind to allay the discontent and opposition to the treaty, assigning as a reason, that they were peculiarly well adapted to the understanding of the people at large.

When Mr Webster resided in New York, the yellow fover prevailed at different times in most of our large Atlantic cities; and a controversy arose, among the physicians of Philadelphia and New York, on the question whether it was introduced by infection, or generated on the spet The subject interested Mr. Webster deeply, and led him into a laborious investigation of the history of pestilential diseases at every period of the The facts which he collected, with the inforences to which he was led, were embodied in a work of two volumes, octave, which, in 1799, was published both in this country and in England This work has always been considered as a valuable repository of facts; and dirring the prevalence of the Asiatic cholera in the year 1832, the theories of the anthor seemed to receive se much confirmation, as to excite a more than

ordinary interest in the work, both in Europe and America.

During the wars which were excited by the French revolution, the power assumed by the bolligerents to blockade their enemies' ports by proclamation, and the multiplied seizures of American vessels bound to such ports, produced various discussions respecting the rights of neutral nations in time of war. These discussions induced Mr. Webster to examme the subject historically; and, in 1802, he published a treatise full of munte information and ablo reasoning on the subject. A gentleman of compotent abilities, who said ho had read all that he could find on that subject in the English, French, German, and Italian languages, declared that he considered this treatise as the best he had seen. The same year, he also published "Historical Notices of the Origin and State of Banking Institutions and Insurance Offices," which was republished in Philadelphia by one Humphrey, without giving credit to the nuthor, and a part of which, taken from this reprint, was incorporated into the Philadelphia edition of Rees's Cyclopedia

At this time, Mr. Webster resided at New Haven, to which place he had removed in the spring of 1708. For a short period after his departure from New York, he wrote for the papers mentioned above, which, although placed under the eare of another editor, continued for a time to be his property. He very soon succeeded, however, in disposing of his interest in them, and from that time devoted himself entirely to hterary

In the year 1807, Mr. Webster published "A Philosophical and Practical Grammar of the English Language." This was a highly original work, the result of many years of diligent investigation. The nuther's views may be gathered from the motto on the title-page, taken from Lord Baeon's Aphorisms — "Antisthenes, being asked what learning was most necessary, replied, 'To unlearn that which is naught.'" considered our English Grammars as objectionable in one important respect, namely, that of being too much conformed to those of the Latin and Greek languages in their nomenclature and classification. True philosophy, he maintained, requires us to arrange things, and give them names, according to their real nature. But our language is rude and Languages arregular in comparison with those of the ancients. It can not be reduced to the same orderly system The several parts of it can not be brought under the same names and classifications. We need therefore a nonclature of our own in some important particulars. Thus the word monous properly d notes a substitute for a nous. Lut in many cases, words of this class are enhanteness for clauses or parts of senteness, and not for sincle nonns. There are also other words not ordinarily ranged among ample nouns which act equally as substitutes, that is perform the office of pronouns Mr Webster therefore proposed to lay ande the word pronouns and apply the term substitute to this whole class, as describing the irrespondent to the contract of the class and the contract to the class and the contract to the class as describing the class as described to the class as d true office. Other changes were proposed of the same nature and for the same reasons he one, who examines the subject with attention can doubt the advantages of Mr Webster e nomenclature in stell considered It enabled him to cave an analysis of sentences, and to explain constructions in a manner incomparably superior to that of the ordinary systems His intimate acquaintance with the cources of our language prepared him to account in the most satisfactory manner for many puzzling forms of expression buil the prejudice arginst a change of nomenclature is so great that this work has been far less known than at ought to be It contains much valuable matter found in no otler work and is believed to be the most truly philosoph cal Grammar which we have of the English language

After publishing his Grammar Mr Webster entered in the same year (1807) on the great work of his life which he had contemplated for a long period - that of preparing a new und complete Dictionary of the English language As preliminary to this he had published, in 1806, a dictionary in the octave form containing a large number of words not to be found in any number work with the definitions corrected throughout, though necessarily expressed in very brief terms. From this time his reading was turned more or last directly to this object. A number of years were spent in coll cling words which had not been introduced into the English dictionaries in discriminating with exactness the various genses of all the words in our language and adding those e guifications which they had recently received. Some estimate may be formed of the labor bestowed on the part of the work, from the fact that The American Dictionary of the English La guage contained, in the first edition twelve thousand words, and between thirty and forty thousand define tions which are not to be found in any preciding work The number has been swelled by subsequent additions to about thirty thousan I new words. Seventy years had elipsed since the first publication of Johnson e Dictionary and scarcely n single improvement had been ettempted in the various educant through which it had passed or the numerous compilations to which it had given rise except by the addition of a few words to the youhulary 1 et in this period the English mind was putting itself forth in every direction, with an accuracy of research and a fertility of invention which are without a parallel in any other stage of its history. A complete revolution had taken place in almost every branch of physical science, new departments had been exerted new pureciples developed new modes of classification and description adopted The political changes which so signally marked that period, the ex item at of feeling and conflict of opinion resulting from the American and French revolutions and the minimum modifications which followed in French levinguous, and the manufacture deep impress on the language of politics law end general hierature. Under these circumstances, to make a dofinior dictionary adapted to the present state of our lawrance was to produce an entirely new work and how well Mr Webster exeented the task, will appear from the decision of men best qualified to judge both is this country and in Europe who have declared that his improvements upon Johnson ore even greater than Johnson himself made on those who preceded him Still more labor however was bestewed on another part of the work was the etymology of our leading terms. In this entry of, Mr W befor had always felt a lively interest, as presenting one of the most currous e hibitions of the progress of the human mind But it was not till he I ad advenced considerably in the work at originally commenced that he found how indispensable a knowledge of the true derivation of words is to an exact development of their various awanings At this point, therefore he suspended his labors on the defining part of the Decumary and devoted a number of years to an usquery feto the origin of our language and its connection with those of other countries In the course of these researches, he exprained the rocabulance of twesty of the principal languages of the world, and made a synomes of the most important words in each ; stranging them under the same radical letters. with a translate n of their significations, and references from one to saother when the senses ere the same or similar. He was thus embled to ind word from will the secondary some have benefied it will. Being (with a the hatorical evidence on the subject with so much follows used in the Sarahhad with a clave to question and an analysis of the sarahad with a clave to question contains a fundamental and evidence of the expressive properties of the Determinant of the sarahad with the parameter is defected from a term proved it is have one that distingt part of the Determinant and we also by phenomenon of the sarahad was and the whole callectica forms a term to give our random with the sarahad with the s

This owing to the expense of the undertaking has not yet been published though its principal results, so far as our language is concerned are briefly given in tracing the etymology of our leading terms.

During the progress of these labors Mr Webster finding his resources madequa a to the support of his family at New Haven, removed, in 1812, to Amberst, a pleasant country town within such miles of Northamston. Massachusetts Here he entered, with his characteristic ardor into the literary and social interests of the people among whom he was placed His extensive library which was open to all, and his elevated tone of thought and conversation had naturally a powerful influence on the habits and feelures of a small and eccluded nopulation. It was owing in part, probably to his removal to this town that on ecidemy was there established which is now among the most flourshing non names of one land A question having soon after arisen respecting the removal of Williams College from a remote part of the State to some more central remains council from a remote part of the Scale to some more central position. Mr. Webster entered warmly into the design of procuring its establishment at Amberst as one of the most beautiful and appropriate locations in New England. Though the removal did not take place so strong an interest on the subject was awakened in Amberst and the neighboring towns that a new college was soon after founded there, in the establishment of which Mr Webster as president of its first board of trustees had great influence both by his direct exertions to secure it patronage and by the impulse which he had given to the cause of education in that part of the State

In 1822 Mr. Webster returned with his family to New Haven and, in 1823 received the degree of LL. D. from Yale College. Having nearly completed his Dictionary he resolved on a voyage to Lurone with a view to perfect the work by consulting I terary men abrond and by examining some standard authors to which he could not gain access in this country He accordingly sailed for France in June 1871 and spent two mouths at Pans in consulting accorning works in the BU of one du I or sultan went to England where he remained till May 18 He spent then went to England where he remained the page 1-22 per months at the University of Cambridge where he had free access to the pubble bivaries and there he finished Trit. Micrica. Dictronant He afterward yunted London Oxford, and some of the other principal cities of England and in June returned to this country This yout to England gave lum an opportunity to become acquainted with literary men and literary mut intions in that country and to learn the real state of the Lagled language there

boon after Dr Webster returned to this country the necessary arrangements were made f r tie publication of the work. An edit in of twenty five hundred copies was printed in this country at the close of 1999 which was followed by an edition of three thousand in Lingland under the apportmend not of L. H. Barker Log editor of the Theomeras Greece Lingues of Henry Stephens With the publication of the American Dict nary at the age of seventy Dr Vehater count red the labors of his literary life as brought, in a great measure to a cline. He revise I a few of his earler works for publication and particularly his Heatry of the Un ted blates a book designed for the higher classes of acheels, for youth who are acquiring a taxte for history and for ni o of

of achieving, for yourse who are sequenting a factor for instory more one on the one bounces who have not time to peruse singer treatmen.

In 1840-41 De Weinfar published a second edition of the American Detonary consisting of three the mand copies, in two volumes, ryal octave. The improvements consisted cheefy in the abilition of a numher of thousand words to the vocabulary the correction of definitions in several of the sciences in conf runty with later discovering and classical order of the sciences in confirmity with later discovering and classical order of the sciences in confirmity with later discovering and classical order of the sciences in confirmity with later discovering and classical order or the science of the sciences in confirmity with later discovering and classical order or the science of the sci sofications and the introduction and e planat n of many phrases from foreign languages, and of foreign terms used in books of music

In 1813, b. published "A Collect on of Fapere on I olderal Literary and Moral Subjects" in one volume octavo. This was composed of edge of tracts and disquisitions, which had been published at an earlier i chall of his life either in the form of pamphlets, or of papers read before its erary and philosophical societies, and printed among this Transactions It contains his Observations on the Fr and Revolution has "F are an the Pughts of Neutral Vet out and the papers served Curry's, in via dication of Mr Jay a treaty with Great Britain. To these is added an elaborat describits in On the supposed Change t the I imperitive of Benter which was read before the Connect out leaderny of little and Sciences, in the year 170. In this be contriverts the op in a sluch has generally provided that the temperature of the winter + ason, in north em laistudes, has suff red a material change and become warm w in modern than it was in assect times. The subject was one will or required very great minuteness and extent of historical research, and this mover contains the result of a series of investigations, with heal here curred on, in conjunction with the author e other pursuits for a period of discover the real or probable efficities between the different languages, more than ten years. Many of the facts which it proces a are of a very and in many instances, to discover the primary plysical idea of an original process and studies and studies and studies are probably no other treatments of the facts which it process are of a very ind word from will the secondary sense have branched forth Being satisfies the haterind evidence on the subject with no much follows and

service and literary labor. The leading traits in the character of Dr. Wobster were enterprise, self-reliance, and indomitable perseverance. He was naturally of a sanguine temperament; and the circumstances under which he entered on the active duties of life were emmently suited to strengthen the original tendencies of lus nature. Onr country was just struggling into national existence. The public mind was full of ardor, energy, and expectation. His early associates were men of powerful intellect, who were engaged, to a great extent, in laying the foundations of our government, and who have stamped the impress of their genius on the institutions of their country As the advocate of the Federal Constitution, and a strenuous supporter of Washington's administration, ho was brought inte habits of the closest intimacy with Alexander Hamilton, John Jay, Ohver Wolcott, Timothy Pickering, and the other great men on whom Washington relied for counsel and aid in organizing the new government The journal which he established at New York was their organ of communication with the public, in the great commercial emperium of the United States. He was thus placed on terms of constaut and confidential intercourse with the leading members of the cabinet, and the preminent supporters of Washington throughout the coun-While he had their respect as a ready and energetic writer, he enjoyed their counsel, imparted with the utmost freedom, as to the manner in which he might best conduct the defense of their commen The natural result, especially on a mind constituted like his, was the formation of all his habits of thought and action into a resemblance to theirs. Energy, self-rehance, feorlessness, the resolute defense of whatever he thought right and useful, the strong hope of ultimate mecess, - these became the great elements of his intellectual character He carried them with him, at a subsequent period, into all his literary pursuits, and they sust uned him under the pressure of difficulties which would have crushed the spirit of almost any other man.

One of the habits which Dr Webster formed in this early course of training, was that of arranging all his acquired knowledge in the most exact order, and keeping the elements of progressive thought continually within his reach. Although his memory was uncommonly quick and tennerous, he saw, as the editor of a daily journal, how idle and musafe it is to rely on mere recollection for the immense mass of materials which a public writer must have ever at command. He learnt, therefore, to preservo documents of all lands with the utmost care. All that he had ever written, all that had been written against him, overything that he met with in newspapers or periodicals which seemed likely to be of use at any future period, was earefully laid aside in its appropriate place, and was ready at a moment's warning He had also a purticulor mark by which he denoted, in every work he read, all the new words, or new senses of words, which came under his observation. He filled the margin of his books with notes and commouts containing corrections of errors, a comparison of dates, or references to corresponding passages in other works, until his whole library became a kind of Index Rerum, to which he could refer at once for everything he had read.

Another habit, which resulted in part from his early pursuits, was that of earrying on numerous and diversified employments at the same time To men of the present generation, Dr. Webster is known chiefly as a learned philologist; and the natural inference would be, that he spent his whele life among his books, and chiefly in devotion to a single class of studies The fact, honever, was far otherwise Though he was always a close student, - reading, thinking, and writing at overy period of his life, - he never withdrew lumself from the active employments of society. After his first removal to New Hinsen, he was for a number of years one of the aldermen of the city, and judge of one of the State courts. He also frequently represented that town in the legislature of the State During his residence at Amherst, he was called, in repeated instances, to discharge similar duties, and spent a part of several winters at Boston as a member of the General Court. Ho entered with zeal into all the interests of the town and county where he lived, its schools and academics, its agriculture and mechanic arts, its advance in taste and refinement. He gave freely of his time, his counsel, and the efforts of his pen, when requested, in public addresses, or through the medium of the press, for the prometion of every kind of social improvement. Equally large and diversified was the range of his intellectual pursuits was hardly any department of hterature which he had not explored with lively interest, at some period of his life. He wrote on a greater variety of topics than perhaps any other author of the United States :foundations of government, the laws of nations, the rights of neutrals. the science of banking, the lustory of his country, the progress of discases, and the remations of clumate; on agriculture, commerco, education, morals, religion, and the creat means of national advancement, in relation to the principal theme of his life, philology and grammar. Such was the activity of his mind, and the delight he found in now neguritions, that a change of employment was all the relief he needed from the wearings of pretructed study. The refreshment which others seek in jerracy, or the entire suspension of not llectual effort, he found, during more of his life, in the stimular afforded by some now and exciting object of pursuit. Mental exertion was the native element of his soul; and it is not too much to ray, that another instance of such long-continued litgrany tral, such secondy, unfaltering industry, can hardly be found in the annals of our country.

The last of those mental habits which will now be traced was that of original investigation, of thorough and penetrating research. The period at which Dr. Webster came forward in public his was one, to an uncommon extent, in which every important subject was discussed in its principles. It was a period when the foundations of our civil polity were laid. and when such men as Hamilton, Madison, and Jay became "the expounders of the Constitution," and the advocates of the new government. All things conspired to make the discussions of that day masterly exhibitions of reasoning and profound investigation, - the character of the men engaged, the conflict of great principles, and the weighty interests Dr. Webster for some years took a large share suspended on the issue in these discussions, both in pamphlets and through the journal which he conducted. The habits which he thus formed went with him inte all the literary pursuits of his subsequent life. They made him a bold, original thinker, - thorough in all his investigations, and fearless in proclaiming the results. He had no deforence for authority, except as sustained by ingument. He was no copyist, no mere compiler. Everything he wrote, from a chapter in "The Prompter," to his "Introduction to the American Dictionary, bore the same impress of original thought, personal observation, and independent inquiry.

It is unnecessary to say how perfectly these liabits were adapted to preparo Dr. Webster for the leading employment of his life, the production of the American Dictionary. Nothing but his eager pursuit of every kind of knowledge, and his exact system in bringing all that he had ever read completely under his command, could have enabled him to give in his first edition more than twelve theusand words and forty thousand definitions, which could then be found in no other similar work ing but his passion for original investigation prevented him from building, like Todd, on the foundation of Johnson, or nrranging Horne Tooke's ctymologies, like Richardson, with some additions and improvements, under their proper heads in a dictionary. But, commencing with the Diversions of Purloy as the starting point of his researches, he was led by the character of his mind to widen continually the field of his inquiries Ho passed from the Western languages to the Eastern, in tracing the affinities of his native tongue. He established some of these great principles which have made etymology a seicnee, and led the way in that brilhant career of investigation by which the German philologists are throwing so clear a light on the origin and filiation of the principal languages of the globe. But into these studies he would never have entered, nor oven thought of attempting such a work as an original dictionary of the English language, except under the impulse of those other traits, - that sanguine temperament, that spirit of self-rehance, that fearless determination to carry ont everything that he thought useful and true, to its utmost hmits, - which were spoken of above, as forming the master principle of his character. It is difficult to conceive, at the prescut dry, how rash and hopeless such an undertaking then appeared on the part of any citizen of the United States. It was much as though we should now hear of a similar design by one of the settlers of New Holland assailed with a storm of ridicule at home and abroad; and even his best friends, while they admired his constancy, and were fully convinced of his erudition, had strong fears that he was engaged in a fruitless effort, that he would never have justice done him, in bringing his work before the world under such adverse eireumstances. Nothing, plainly, but uncommon ardor, beldness, and self-confidence, oculd have sustained him under the pressure of these difficulties. But such qualities, it must be confessed, notwithstanding all the support they afford, are not without their disadvantages. They often lead to the adeption of hasty opinions, especially in new and intriente inquiries. Of this Dr. Webster was nware. Ho saw reason to chango his views on many points, as he widened the sphere of his knowledge. In such cases, he retracted his former statements with the utmest frankness; for he had not a particle of that pride of opinion which makes men so often ashamed to confess an error, even when they have seen and abandoned it. This arder of mind is apt. also. to lead men into a strength and confidence of statement which may wear nt times the aspect of degmatism. If Dr. Webster should be thought by nny one to have erred in this respect, the error, it should be remembered, was one of temperament - the almost necessary result of that hold, selfrelying spirit, without which no man could have undertaken, much less have carried through, the Herculean task of preparing the American Dictionary. Those, however, who knew him best, can testify that his strength of statement, however great it might be, was never the result of arrogance or presumption. He spoke from the niero frankness of his nature; he practiced no reserve; he used none of that cautions phraseology with which most men conceal their feelings, or guard against misconstruction. He was an ardent lover of truth, and he spoke of the discoverres which he beheved himself to have made, much as he would have spoken of the same discoveries when made by others. He was aware that there must be many things in a book like this, especially on a serence so imperfect in its development is etymology, which would not rland the test of time. But he never doubted, even in the dorkest sensors of discouragement and obloquy, that he could at last produce such a work, that the world "should not willingly let at die." The decision of the public verified his anticipations, and freed him from the charge of presumption Three very large editions, at a high price, have already been exhausted in this country and England. The demand is still increasing

on hoth a fear it the Atlante and the suither might well be gratified to whose character he always regarded with the harbest renoration learn that a concludence who may be supported by an American. That, are is the only real dictionary which we have of our language through it was preprieted by an American.

In his social habits Dr Webster was distinguished by digmined case affability and politeness He was punctilious in his observance of all the more proprieties of his There was nothing that anneyed him more or an which he remarked with greater koonness than any violati u of the established rules of decoram any disposition to med ile with the concerns of others or to encroach on the sunctity of those rights and feelings which as they can not be protected by law must owe their security to delicacy of centiment in an enlightened community. He had an ancommon degree of refinement is all his thoughts and feelings. Never in his most sportive or unguarded moments did any sent munt escape him which was coarse or vulgar. He had in this respect almost a feminine purity of mind It mucht be truly said of him as was remarked concerning one of his distinguished contemporari s in public life that he was never known to utter an expression which mucht not have been used with entire Known to utter an expression which chapte nor nive come many transcritors he was acknowleded by all to be not not by that it is not refined with him for hi never to be in dolt. Everthing was a principle with him for hi never to be in dolt. Everthing was part for at the time of parchase. In all has deships and seven thing course he was exemarkably direct, finals and open. He had but one character and that was known and read of all mee What yer faults might be imputed to him no one ever suspected him of double dealing

no one ever thought be was expable of a mean or dishenomble action In the discharge of his domestic duties De Webster was watchful consistent and firm. Though immersed in study he kept in his hands the entire control of his family arrangements down to the minutest particulars Everything was reduced to exact sistem all moved on with perfect regularity and order for m il wi was the press lang pracciple of his life. In the government of his children there was hot one role and illat was instantan one and entire abodience. This was indicted upon as right.—as in the nature of things due by a child to a parent. If e did not rest his claim on any explanations or on sh wing that the thing remired was remonable or ben ficial While he endeavered to make it clear to his children that I e sought their happin as in what see he require I he commended as one having authority and he enforced his commends to the utinost as a doty which he ewed equally to his children and to God who had placed them and rhis control. He felt that on this enbject there and been a gradual I thing down of the tone of public sentiment which Many in I roukin away from the etermoes was much to be d plored of Purstan discipling have gone to the opposite extreme. They have virtually about oned the excress of pursual authority and endeavored to regulate the conduct of their children by reas ning and persuasion by the mere presentation of motives, and not by the enforcement of com mands. If such persons succeed as they received in preserver n this hike a comfortable state of subordination in their familes they fail at least in the accomplishment of one great end for which their off jung were committed to their care. They send forth their children into life without any of those habits of submission to lawful authority which are ess atial to the character of a good citizen on l n useful member of soci In the intell ctual training of I is children on the otler hand Dr Webster had much less of system and complicated machinery if an many are d speed to edupt. His great principle was not to overdo, — to let na ture have fine scope and te leave the development of the mind within certain limits, to the operation of awaken d carossty direct 1 to its proper objects. He therefore threw open his extensive library to his helper objects the training of their lives, and said in the words of Cotton Math r Read and you will know! He felt that indeen should see to acquire knowledge by severe effort; that the prevailing imposition to make everytling easy is unphilosophical and wrong that the great ob ject of early training is to form it e min I into a capacity of surmound g intellectual difficulties of any and every kind. In his view also the youn, have much to I am in early life the use of which they can not of so complicate I a language as ours and all those east may which lead f rward children no faster than they can understand and apply ever a reant contains a solver than they can understant a and apply every word they apply, he could it red as reducibly erroneous. If was ed, on the contrart, at this early revied of ready metuory and I'm ted comprehension to store it o mind with many things which would nit reard lef under individual to many things which are larm with the utmost rel chance of individuals the utmost rel chance er rath r in most cases, are not I armt at all in the more advanced stages of int flecteal progress. He f it that the re mu t n command he much of denligery in the formation of a th roughly ed scated mind. He is on his it wise therefore to comm be those tasks will hit myolres, from the earl ast period at which the youthful int livet can endure them. Upo these principles he constructed his belling Look and other work for the use of children. He ex gued to make them instructive, and not mere Wh ther Lis views were immrreet or amphilosoph books of an element

leal, the public will inder

Lin supert to reli um Ir Websier was a firm bel for during a larger
First of he life, in the great desirective doctrines of our luctuar ancestors,

There was a period however from the time of his I name college to the ago of forty when he had doubts as to some of those doctraces and rested in a different system. Soon after he graduated being uncertain what business to attempt or by what means he could obtain subsistence he felt his mind greatly perplexed and almost overwhelmed with gloomy apprehensions. In this state as he afterward informed a friend he read Johnson a Lambier with unusual interest and in closing the last vol ame he made a firm resolution to pursue a course of virtue through life and to perform every mornt and social duty with scrupulous exactness. To this he added a neitled behef in the impration of the corpiures and the governing providence of Cod connected with highly reverential views of the daying character and perfections. Here he rested placing his chief reliance for solvation on a faithful discharge of all the relative duties of his though not to the entire exclusion of depen lence on the ments of the Redeemer. In this state of mind he remained, though with some reserving and frequent fluctuations of feeling to the winter of 180 -8 At that time there was a season of general religious interest at Yew Haven, under the ministry of the first Moses Stuart now a professor in the Andorer Theological Seminary To this Dr Webst resittention was first directed by observing an unusual degree of ten larness and sol ministry of feeling mail the adult members of his family. He was thus led to reconsider his former views and inquire with an earnestness which he had never felt before, into the nature of personal religion and the true ground of mans acceptance with God. He had now to decide not for himself only bat, to a certain extent for others whose spiritual i tereats were committed to his charge. Under a sense of this responsibility he took up the study of the Bible with painful solicitude. As he advanced the objections which he had formerly entertained against the humbling doctrines of the gospel wom wholly removed. He felt their truth in his own experience. He felt that salvation must be wholly of grace He felt constrained as he afterward told a friend to cast him self down before God conf as his sup, Implore parden then ich tha ments of the Rediemer and there to roaks his your of entire obedience to the communits and devotion to the service of his Maker. With his chameteristic prompt tude be instantly made known to his family the feelings which he entertained. He called them together the next morning an told the me, with deep emotion, that while he had aime I at the faithful ds churge of all his duty a as their parent and head I e had neglected one of the most important - that of family prayer After mading the wrintures, ha led them with deep columnity to the throne of grace and from that time continued the practice with the livelest interest, to the period of his d ath. He made a public profession of religion in April, 1808. His two oldest druck ters united with him in the act, and another only

twelve years of age, was soon ad 1-d to the number. In his relogancy feedings Dr. Webster was remitikally equable and cheerfal. He had a very strong sense of the previous or God as extending to the numbers to convene of 1c. In this he is and a source of continued in prost an I consolition under the severe labors and numerous rich which is lead to endown. To the same third hadd he hadranly carely if sever rook it is alighbest refreshment of any him leven between mask, without in noncentry space and a silent tribute to God as the giver. He made the 'emploises is daily study. Meet it is complited to 1 by Detronary sepecially 0 any were always jurge on his table and he probably read them more than all other books. He if it from that there is the best of the little was resided, and that little class remained incert at the believe of the little were select, and that little class remained to the control of the cont

AUTHOR'S PREFACE TO THE EDITION OF 1828.

elementary book for facilitating the acquisition of our vernacular tongue, and for correcting a vicious prominciation which prevailed extensively among the common people of this country. Soon after the publication of that work, - I believe in the fellowing year, - that learned and respectable scholar, the Rev Dr GOODRICH, of Durham, one of the trustees of Yale College, suggested to me the propriety and expediency of my compiling a Dictionary which should complete a system for the instruction of the citizens of this country in the language. At that time, I could not undalge the thought, much less the hope, of undertaking such a work, as I was ucither qualified by research, nor had I the means of support, during the execution of the work, had I been disposed to undertake it For many years, therefore, though I considered such a work as very desirable, yet at appeared to me ampracticable, as I was under the necessity of devoting my time to other occupations for obtaining subsistence

About thirty-five years ago, I began to think of attempting the compilation of a Dictionary I was induced to this undertaking, not more by the suggestion of friends, than by my own experience of the want of such a work while reading modern books of science. In this pursuit I found almost insuperable difficulties, from the want of a dictionary for explaining many new words which recent discoveries in the physical sciences had introduced into use To remedy this defect in part, I published my Compendious Dictionary in 1806, and soon after made

preparations for undertaking a larger work

My original design did not extend to an investigation of the origin and progress of our language, much less of other languages I hanted my views to the correcting of certain errors in the best English dictionaries, and to the supplying of words in which they are deficient. But after writing through two letters of the alphabet, I determined to change my I found myself emburrassed, at every step, for want of a knowledge of the origin of words, which Johnson, Bailey, Junius, Skinner, and some other authors, do not afford the means of obtaining laying aside iny manuscripts, and all books treating of language, except lexicons and dictionaries, I endeavored, by n diligent comparison of words having the same or cognate radical letters, in about twenty langrages, to obtain a more correct knowledge of the primary sense of origanal words, of the affinities between the English and many other langnages, and thus to enable myself to trace words to their source

I had not pursued this course more than three or four years before I discovered that I had to unlearn a great deal that I had spent years in learning, and that it was necessary for me to go back to the first rudiments of a branch of erudition which I had before cultivated, as

I had supposed, with success

I spent ten years in this comparison of radical words, and in forming a Sympass of the principal Words in twenty Languages, arranged in Classes under their primary Elements or Letters. The result has been to open what are to me new views of language, and to unfold what appear to he the grnume principles on which these languages are constructed.

After completing this Synopsis, I proceeded to correct what I had written of the Dictionary, and to complete the remaining part of the work. But before I had finished it, I determined on a voyage to Enrope. with the view of obtaining some books and some assistance which I ranted, of learning the real state of the pronunciation of our language in England, as well as the general state of philology in that country, and of attempting to bring about some agreement or coincidence of

to Edward Colb, Esq., of Portland, Maine, and afterward to the Rev. Professor Fowler, of Amherst, Mass.; the fourth, also deceased, was married to Horatio Southgate, Esq., of Portland, Manie, and left at her death a daughter, who was adopted by Dr Webster, and is now married to Henry Trowbridge, Jun, Esq, of Now Haven; the fifth is married to the Rov. Honry Jones, of Bridgeport, Conn, and the sixth remains unmarried, in the family of her brother. In conclusion, it may be said that the name of NOAH WI BETFR, from

the wide circulation of some of his works, is known familiarly to a greater number of the mhabitants of the United States, than the numo, probably, of any other individual except the FATHER OF HIS COUNTRY. Whatever influence he thus acquired was used at all times to promote the best interests of his fellow-men. His books, though read by milhons, have made no man worse. To multitudes they have been of lasting bonefit, not only by the course of oarly training they have furnished, but by those precepts of wisdom and virtuo with which almost overy page is

In the year 1783, just at the close of the Revolution, I published an | construction In some of these objects, I finled; in others, my designs were answered

It is not only important, but in a degree necessary, that the people of this country should have an American Dictionary of the English Language, for, although the bedy of the language is the same as in England, and it is desirable to perpetimte that sameness, yet some differences must oxist Language is the expression of ideas; and if the people of one country can not preserve an identity of ideas, they can not retain an identity of language. Now, an identity of ideas depends materially upon a sameness of things or objects with which the people of the two centries are conversant. But in no two portions of the earth, remote from each other, can such identity be found. Even physical objects must be different. But the principal differences between the people of this country ind of all others arise from different forms of government, different laws, institutions, and customs. Thus the practice of hauking and hunting, the institution of heraldry and the feudal system of Eugland, originated terms which formed, and some of which now form, a necessary part of the language of that country; but, in the United States, many of these terms are no part of our present language, and they can not be, for the things which they express do not exist in this country can be known to us only as obsoleto or rs foreign words On the other hand, the institutions in this country which are new and peculiar give rise to new terms, or to new applications of old terms, unknown to the people of England, which can not be explained by them, and which will not be inserted in their dictionaries, nuless copied from ours. Thus the terms land-office, land-warrant, location of land, consociation of olinrelies, regent of a nonversity, intendant of n city, plantation, selectmen, senate, congress, court, assembly, escheat, etc., are either words not belonging to the language of Eugland, or they are applied to things in this country which do not exist in that No person in this cenntry will be satisfied with the English definitions of the words congress, senate, and assembly, court, otc , for although these are words used in England, yet they are applied in this country to express ideas which they do not express in that country With our present constitutions of government, escheat can never have its feudal sense in the United States

But this is not all. In many cases, the nature of our governments and of our civil institutions requires an appropriate language in the definition of words, even when the words express the same thing as in England. Thus the English dictionaries inform us that a justice is one deputed by the king to do right by way of judgment; he is a lord by his office; mstrees of the peace are appointed by the Ling's commission-language which is maceurate in respect to this officer in the United States constitutionally is defined, by Chalmers, legally; but in this country the distinction between constitution and law requires a different definition In the United States, n plantation is a very different thing from what it is in England The word murshal, in this country, has one important application unknown in Eugland, or in Europe

A great number of words in our language require to be defined in a phriseology accommodated to the condition and institutions of the people in these States, and the people of England must look to an American Dictionary for a correct understanding of such terms

The necessity, therefore, of a dictionary suited to the people of the United States is obvious; and I should suppose that, this fact being admitted, there could be no difference of opinion as to the time when such a v ork ought to be substituted for English dictionaries.

There are many other considerations of a public a sture which serve to op nions in regard to unsettled points in prominention and grammatical justify this attempt to furnish an American work which shall be a guide to the routh of the United States Most of these are too obvious to Jaconness our citizens are very little behind the most ealiestered Peorle remure illustration

One consideration however which is dictated by my own feelings but which I trust will meet with approbation in correspondent feelings in my fellow-citizens ought not to be passed in all nea. It is thus clief glory of a nation says Dr Jonasov arises from its authors. With this opinion deeply impressed on my mind I have the same ambition which actuated that great man when he expressed a wish to erra celebrity to Bacov to HOOKER, to MILTOV and to BOYLE

I do not indeed, expect to add celebrity to the names of Franklin WASHINGTON ADAMS JAY MADPON MARSHALL, I AWAY DWIGHT SWITH THUMBULL, HAMILTON BELLINAP ARES, MARON LENT HARE, VILLUIAN CLEAVELAND WALSH INVINCE and many other Americans distinguished by their writings or by their science but it is with pride menoguesnes of most writings of by near science but it is with pride and satisfaction that I can place them, as authorities, on the same page with these of Boyes, Hookes, Milron Divides Addison Ray Mil-lan, Cowder, Dayr Thouson and Jameson

A life devoted to reading and to an investigation of the origin and a rinthiles of our vernacular language and especially a particular examina tion of the best Enclush writers with a vi w to a comparison of their style and phraseology with those of the best American writers and with our colloquial page enables me to affirm with confidence that the gen ume English idiom is as well preserved by the unmixed Lagladi of this country as it is by the best Auglish writers It is true that many of our writers have neglected to cultivate tasts and the embellishments of style but even those have written the language in its continue selion In this respect Franklin and Washington a hose language is their In this respect Franklin and Washington A loom longuage as their hereditary mother tongue unsophy rivest by not on grammor present as pure models of genuma hard in an Indianov or Swift. But I may further and affirm will truth that our country has produced some of the best module of composition. This siyle of Providers Swift of the through the Fernandire of Mr Autze of Dr Vlasov of Mr Harrer of the product of Mr Autze of Dr Vlasov of Mr Harrer of the Swift of Truth of the Granton of the Charleston of the Truth of the Regal Seemson of the Surrome Court of the United States; of the reports of head deers one Supreme Cort of the Crief States and many oth revitings,—in purity in a me of the particular States and many oth revitings,—in purity in all gence, and in trefument precuisor is equivaled only by that of the best Br tish anthers, and surpassed by that of no Euglish compositions of a

own The ch of rules of a conservence attached one out the halong by remarked at the various shades of the vari

with the statements made on oreh topic, by the latest and most approved authorities. Smart's English Dictionary, in the edition of 1846, has been carefully collited with this work, and also the unfinished one [Craig's], in a course of publication by Gilbert, so far as the numbers have appeared Reference has likewise constantly been made to Richardson's Dictionary, - although this had been previously examined by Dr Webster, - and also to the Analytical Dictionary of Booth. Each of the articles in Brande's Encyclopedia of Science, Literature, and Art, has been collated with the corresponding portions of this Dietionary, as the starting-point, when necessary, of investigation in larger treatises Penny Cyclopedia has been consulted at every step, especially in matters of science; and the Encyclepedin Americana (based on the Gorman Conversations-Lexikon) has been rehed upon, particularly on subjects of Continental literature, philosophy, listory, art, otc. In order to seenre greater neenracy, numerous special dictionaries or vocabularies, confined to some single department, have also been collated with this work; and the ablest treatises on important branches of seience and art have been diligently examined In architecture, the thref rehance has been placed on the Oxford Glossary of Architecture (1845), and the Encyclopedia of Arclutecture (1842), by Gwilt, author of the articles on this subject in Brande's Encyclopedia In agriculturo, Johnson's Farmer's Encyclopedia (1844), and Gardner's Farmer's Dictionary (1846) have been chiefly used In general antiquities, the large treatise of Fosbroko has been frequently consulted, while in classical antiquities, the principal reliance has been placed on the recont Dictionary of Smith (1846), as a work of the highest In respect to the antiquities of the church, the elaborate anthority work of Coleman (1841) has been frequently consulted; and Hook's Church Dictionary (1544) has been collated throughout, with reforence to the rites, ceremonics, vestments, etc., of the Church of England, and also of the Roman Catholic and Greek churches In betau, uso has principally been made of the writings of Lindley and Louden In Natural History, Partington's British Cyclopedia of Natural History (1835-37), and Jardine's Naturalist's Library (1831-43), have been much consulted, in connection with the articles on these subjects in the Penny Cyclopedia and similar works In geology, nuneralogy, and some associated branches of natural lustery, Humble's Dictionary of terms in these departments (1840) has been compared with this work throughout In respect to mercantile subjects, banking, coins, woights, measures, etc. M'Culloch's Commercial Dictionary (1845) has been collated at every step, as the standard work on these subjects. In manufactures and the arts, Dr Ure's Dictionary of Manufactures, Arts, and Mines, with its Supplement (1845), has been relied upon as of the highest anthority. In engineering and mechanical philosophy, Hebert's Engineer's and Mechanic's Cyclopedia (1842) has been carofully collated, with a constant reference to the more popular and recent Dictionaries of Francis, Grier, and Buchanan, in the editions of 1846. In scammiship, the Dictionary of Marine Terms, in Liontenant Totten's Naval Text-Book (1841), has been taken as a guide. In military affairs, the Dictionary of Campbell (1844) has been followed, in connection with the more extended articles contained in Brando and the Penny Cyclopedia, on the kindred topics, the fine arts, much use has been made of the Dictionary of Elmes demestic economy, the Encyclopedia of Webster and Parkes on this subject (1844) has furnished many important statements, on a great variety of topics, presented for the first time in a scientific form; and to this has been added Cooloy's Cyclopedia of Practical Recoipts (1846), as exhibiting much collateral information in respect to the arts, manufactures, and trades. Such, in general, are the authorities which have been relied on in

But it is obviously impossible for any one mind to embrace with necurary all the various departments of knowledge which are new brought within the compass of a dictionary Hence arise most of the orrors and inconsistencies which abound in works of this kind To avoid these as far as possible, especially in matters of science, the Editor at first made an arrangement with Dr JAMES G PERCIVAL who had rendered important assistance to Dr Wobster in the edition of 1828, to take the entire charge of revising the scientific articles embraced in this work. This revision, bowever, owing to causes beyond the control of either party, was extended to but little more than two letters of the alphabet; and the Editor then obtained the assistance of lus associates in office, and of other gentlemen in various professional omployments To these he would now return his acknowledgments for the aid they have afforded articles on law have been collated with Blackstone, and with Bonvier's Law Dictionary, by the Hon Elizur Goodrich, formerly Professor of Law in Yale College, and the errors discovered, which were few in number, have been carefully corrected The departments of ecclesiastical history and ancient philosophy have been thoroughly revised by the Rev JAMES MURDOCK, D. D., Into Professor in the Andover Theological Seminary, who has furnished, in many instances, new and valuable The terms in chemistry have been submitted to Professor SILLIMAN, of Yalo College, and whatever changes were requisite in the explanations have been made under his direction. In the departments of botany, anatomy, physiology, medicine, and some branches of natural Dr Webster received assistance, in the revision of 1840, as incutioned above, from Dr William Tully, Into Professor in the Medical constant use there as local terms. The recent investigations of Forby,

in its various applications, has been diligently examined and compared | Institution of Yale College. Still further aid has been received from the same source in the present revision, and much of the accuracy of this work, in these brunches, will be found owing to the valuable assistance he has thus afforded On topics connected with Oriental literature, and has frequently been obtained from Professor Gines, of Yale College. A part of the articles on astronomy, moteorology, and natural philosophy, in the edition of 1828, pussed under the revision of Professor Olmster, of Yalo College. This revision has new been extended to all the articles on these subjects throughout the work, and new definitions have been furnished in numerous instance. The definitions in mathematics, after liaving been compared with these given in the Dictionaries of Hutton and of Barlow, have been submitted to Professor STANLEY, of Yale College, and the alterations have, in all eases, been made under his direction. In the sciences of geology and mineralogy, a thorough revision of the whole relume has been made by Junes D. Dana, Eng., Geologist and Mineralogist of the United States Exploring Expedition, and associato editor of the American Journal of Science and Arts, to whom the editor is likewise indebted for assistance on various other subjects, which his greatly calinneed the value of the work. In practical astronomy, and the seieuce of entomology, and has been frequently received from EDWARD C HERRICK, Esq., Librarian of Yalo College. The articles on punting and the fine arts have, to a great extent, passed under the inspection of NATHANIEL JOULLYN, E. q., Painter, of New Haven, and now definitions have in many cases been furnished.

A correspondence has likewise been carried on with literary friends in England, and especially with one of the contributors to the Penny Cyclopedia, with a view to obtain information on certain points in respect to which nothing definite could be learned from any books within the reach of the Editor. Extended lists of words linve been transmitted for examination, and returned with ample netes and explanations. Much obsenrity has thus been removed in respect to the use of torms which have a peculiar senso in England, especially some of frequent occurrence et the universities, in the eireles of tride, and in the familiar intercourse of life. To the friends who have given their assistance in these various departments the Editor would return his cordial thanks. Whateverimprovement the work may have guided from this recision, in respectto olearness, accuracy, and fullness of definition, will be found owing, in

a great degree, to the aid which they have this afforded.

With regard to the insertion of new words, the Editor has felt muchhesitation and ombarrassment. Some thousands have been added in the course of this revision, and the number might have been swelled to many thousands more, without the slightest difficulty. There is, at the present day, especially in England, a boldness of inneration on this subject which A hasty introduction into our dicamounts to absolute licentionsness tionaries, of new terms, under such circumstanees, is greatly to be deprecated. Our vocabulary is already encumbered with a multitude of words, which have never formed a permanent part of English literature, and it is a serious ovil to add to their number. Nothing, on the contrary, is so much needed as a therough expurgation of our dictionaries in this respect tho rejection of many thousands of words, which may properly find n place in the glossaries of antiquarians, as a curious exhibition of what has been proposed, but never adopted, as a part of our language, but whieli, for that reason, can have no claim to stand in a dictionary designed for general use. All words, indeed, which are necessary to an understanding of our great writers, such as Bocen, Spenser, Shakespeare, etc. onglit, though now obsolete, to be carefully retained, and in the present rovision a considerable number of this class have been introduced for the first time Other words have likewise been admitted, to a limited extent, namely, the familiar terms of common life in England, which have been much used of late by popular writers in Great Britain. Many of these need to be explained for the benefit of the readers in this country, and, if marked as "familiar," "colloquial," or "low," according to their true character, they may be safely inserted in our dictionaries, and are entitled to a place there, as forming a constituent part of our written and spoken langunge One of the most difficult questions on this subject relates to the introduction of technical and scientific terms. Most of our general dictionaries are, at present, without any plan as to the extent and proportion in which such words should be inserted; nor can they ever be reduced to order until creb department is revised by men of science who are intimately acquainted with the subjects, and who are competent to decide what terms ought to be admitted into a general dictionary, and what terms should be reserved for special dictionaries devoted to distinct branches of science Something of this kind, on a limited scale, has been attempted in the progress of this revision Lists of words have been obtained from the gentlemen mentioned above which might properly be inserted in this volume; and very few terms of this class have been admitted except under their direction. In accordance with their advice, a small number have been excluded; but in this respect the Editor has not felt at liberty to carry out his viows in their full extent

In respect to Americanisms, preperly so called, it is known to those who are conversant with the subject, that they are less numerous than has been generally supposed. Most of those familiar words, especially of our older States, which have been considered as peonliar to our country. were brought by our ancestors from Great Britain, and nre still in names of these authors are therefore frequently placed under the words fullness skillful willful as well as at flues and graffness? In question, to indicate their origin and their present use in England Actes have also been added to some words which are reculiar to our country but their number is comparatively small

In reference to Orthography, some important alterations have been made but in strict conformity it is believed with the Author's principles on this subject. The changes in our orthography recommended by Dr. Webster are of two distinct kinds, and rost on very different grounds. These it may be proper for a moment to consider. His main principle was, that the tradence of our language to greater templicity and broader analyses ought to be entitled and cheroked with the utwost care. He felt therefore that when we a movem at toward wider analogies and more general rules had advanced so far as to leave but few exceptions to impede its progress these exceptions ought to be set aside of ouer and the analogy rendered complete. On this ground, he rejected the a from such words as furour labour ote. Of these we have a large number which came to us, in most cases, from Latin terminations in or through the Norman French, but encumbered with the plent w as in emperour author editor etc From this entire class, except about twenty words the s has been gradually dropped and in respect to these scarcely any two persons can be found however streamons for retaining it who are in practice con istent with each other or with thems lives as to the words in which the letter i used in fact we have reached a point where unless we take Webster and the dicts names which across with him as our guilt we have so standard on the subject for Jol mon Walker and others retain the u in numerous words into which no one would think of introducing it at the present day Public convenince therefore domands that we lo at once what must altimat by les done No one can believe that the progress of our language will be arrested on this subject. The u will speedily be omitted in all words of this class unless from the sacredness of its associations it be retained in Seriour which may stand for a time as a sel cary exception. Nor is it Dr. Webster who is the innorator in this case but the English min't which has for two continues been throwing off a useless encountrance and moving steadily on toward creater simplie ty in the structure of our language. Such too is if a case with certain terminotions in ere pronounced like ere as craire meter We have numero is words of this class derived from the French all of which originally ended in -re as, er ler (er fre) chamber (chambre) etc These have been gradually conformed to the Legish spelling and pronumerall m, till the number in ere is reduced to not far from twenty words with their derivatives; and in respect to them also the process is still groups on Center is, to a cound rable extent, the spella " of the best mathematical writers Meter is the word given by Walker in his I hym ing D etimary from a sense of the greet inconsistency of attaching to this word and its decreasive if ameter a different termination. Others are grainally an ier, oing the same change. Dr Wabster proposes, therefore to complete the analogy at one; and conform the spelling of the few il at remain to the gravial principles of our language. Are furre and successore pres at the only difficulty from their liability if changed to be mispressured and may therefore be suffered to stand as ner were Another d parture from the principles of Euglah orthogra Thy which Dr. Welater basend avored to correct is one that was pointed out by Walker in very any hotic terms nearly hity years ago. The principle in question is the — that in a iding to a word the f reastless are effected as angle consonant (if on procedus) is doubled when the accent falls on the last evilable we in forgetting beginning etc. but is not dout of when the accent fills on any of the proceeding syllables as in boseful and good nig ote. Walker bulls fifth Aph room says. For Lowth justly remarks that an error frequently takes place in the weeks worship-ping amazell an etc. which having the accent on the first syllable ought to be written worships of countries. An Lipotrace of this rule line led many to write beyond for begoing and from this epsiling, but inde ten many to write opysites for egyent and from time spound, now in frequently indeed the presentation. But no letter sevens to be more impressedly indeed the presentation of the proposal property of the property of th organ of Lordal in one treat or they titled a decisient the an expose of These were the die borate and Litted topicions of Walley II has half takes the trouble to carry them into his recorbinary instead of relying on a more remark of this kind for the correction of the error—the had usually state it and r about forty rethe, how the participle should be from insortherms and by Webster would have record much how by which they have performed the difficult task of fixing accuracy to the many retirement in for following to the footsteps of Walker and of Lowest, details of this relates:

Holloway and Halbwell have thrown much light on this subject; and the [Walker also says in his Aphoriums ' Why should we ust write duliness fullness skillful trillful as well as st fluess and graffness? The printing least our language plainly require us to do so and Dr Webster felt that the change might exaly be mad. The words which need to be reduced to this anal are are only about eight in number including instal ment and sr. Arabment, which if spelt with a single I are liable to be mispronounced institutent etc. Again the words expense ficense recom pense which formerly had a c ut the list syllabl have now taken an a because the latter consonant is the only one used in the derivatives as erren me etc. A similar chance is ne il 1 in ouly three words more to complete the analogy namely defense offense and pretense and these Dr Webster has chanced it is sometimes asked. Why not chance force also f . For the mple roason that its perivatives are spelt with a oth med fencing and the word therefore stands revaluely with oth med its own class. Finally Dr. Webster proposes to drop the z in riguld and moult because it has been dropped from rold and all other words of the same ording buch are th principal changes under this head introduced by Dr. Webster into his D. tionary. In the pre-ent edition the words are spelt in by the wars for the convent uce of the pubhe except in eases where this seem I to be unnecessary or was found to be mountem at These changes committening the difficulty that always belongs to such a subject have in twith far more favor from the public thru was reasonably to be expected. Most of them have been extensively adopted in our country. They are gaining ground daily as the reasons by which they are supported are more generally an lerst soil; and it is confidently believed that, being found if in established analogues and intended merely to repress irregularities and remove petty exceptions

they most ultimately prevail

The other class of changes mentioned above rests on a different basis -that of Etymology These will be estimated very differently accord ing to the acquaintance of different persons with the languages from which it a words are dirived. When Dr. Whoter substituted bridgeom which is worth and of rived. When the W battle institution of rights and the language of the form of t among to After an experiment of twelve y are he restored the old orthography to a cound rable anmber of such words. In the present edition it is restored in respect to nearly all that remain, from the full conviction that I owever learnible these changes may be in themselves connidered as they do not relate to the general and goes of the language an I can not be duly appreciated by the body of the people they will never

be generally received
On the subsect of Pronunciat o much labor has been bestowed in the progress of the revision I careful comparison has been made with the latest authorities, a I whereve chapter seemed desirable and could be made is con intener with the Anthora prin ples they have been lore introduced. The key to Pronunciation has been see ewhat enlarged, and placed at the bettom of each page for greater on a of ref rence and the pointed letters have been used to a still greater extent. Many thousand words have been respelled and no efforts have been spared to rend r the work in all respects a complete I resourcing D money. In the progress of these labors the Ed to has been frequently struck with the waslam of Dr Weisster in met eftempting too much as to mark in, the pronunciation. Most of the lat r orthogoats as Knowles, "martric have made their system of noistion so ext me ve and comely aled and have somed to exlibit so many more shades on distinction, as in many

cases to perplex rather than sul.

The Publishers being theoreus to mak 1/ ss in all respects, a compicte work of ref rence have in reduced, at the clear of the rol me a list of Greek and Latin Prop r Names with their promiseration prepared by Professor Tharmen of half liege a last of coupting Proper-Names, prepared by Professor Propers of ha Cologo; and a Pro-nouncing Yorabalast of Modern Geographical Names prevaind also and or the superintend nee of Professor Porter Of these a full norunt will be found to the several prefaces by which they are accompanied In conclusion the Filter would acknowledge his old gutoms to the in receivable the x lies well acknowledge has the greater in these labors.

EDITOR'S PREFACE TO THE EDITION OF 1864.

Tiop Al X in 1847, the purpose has been kept steadily in view to prejure and improvements which alterations and improvements which the progress of the larguise and the additional facilities for improving is Lexicography might seem to require The late Professor Goodnich I ad, for mothe first, directed his attention to the collection of words not inserted in the previous edition, and to the preparation of definitions of the lines which had been overlooked, or were made necessary by new applications of words in the writings of respectable authors, and by the Progress of Science and the Arts.
It my of all eservoids and definitions were given to the public in the

Pictor of Edition of 1859, together with numerous illustrative wood ents. The the service and of a large collection of discriminated Synonyms, which Lid ter ear felly prepared by Professor Goodrich. This edition was, for the angular and one, designed to serve only until the more circlui and thereally receiver, a luch I ad been so long in contemplation, could be

perfert d.

In it goes r for the present revision, the attention of both the Editor and the Palakkers was first directed to the Litymology. They were rave that, however admirable the industry and valuable the contributo 13 of the Webster in this department, the science of comparativo Thelegy was by no means perfore in his time, if indeed it could be said energy real. It is only within a very few years that the true principles carl. I if say nee reas have been suggested and confirmed, and the ruckeds have be a determined by which future investigations may be so reserved It seemed a censory, for t of all, that these new reis wheaped methodeshould be appled in the entire revision of the Paytoclars of Dr. Webster, by a scholar who had made Etymology his areal stude. In 1854, arrangements were made with Dr. C. A. F. Many, of B rlin, Present to undertake this task Dr. Mahn was the event if he some of the most distance ushed scholars of Germany is all really qualified for the service, and he had been favorably known is special researches in this department. He has employed several years view it in which and has performed it in a manner worthy of his lach reputation. The results are unlimited to all persons who are interested in philat gradient dien, with the belief that they will find in them a new and valuable scattilistica to the stores of luquistic knowledge. This feature of the present edition will, it is thought, be reknowledged by all s I have evere if reaked successivity, or I will be gratefully welcomed ty er a severy large member of a structure and studious per our who to fire of in require a more thorough browledge of the English

The fern - James D. Dana of Yale College, had been engaged, at an every least of the sould defect it is an Goodges. Natural History, etc., and the same and expendent to the description of the section of the se

to he would be extended the car for emerity.

The would be referred the detailing of the principal words occasioned The work of the first the delimiters of the principal world occasioned for a longer of a shorter period.

The following persons have been actively engaged in the preparation of an invasion of the defective method which the work. Mr. Withit G. Winstein, — who has for many years ked here a first special replaced of the country world by countries that it is also a first special replaced in the roll of the field, first in connection with his honored father, and substitute the roll of the field, first in connection with his honored father, and substitute the roll of the field, first in connection with his honored father, and substitutely a replaced of the roll of the family, in respect to all questions of doubt or difficulty.

Spece the publication of the Revisi n Edition of Webster's Dic-I was relucta it to assume the labor and responsibility which it involved. At last, with enfeebled bodily strength, he consented to enter upon a tentative process in connection with able and experienced associates. These associates were, at first, Mr. William G. Webster, the Rev. Chauncer Goodrich, and Professor Chester S. Lyman, of Yalo College, all of whom had been employed in preparing the Pictorial Edition. Only repeated trials could satisfy so conscientions a lexicographer as Professor Goodrich in respect to the best plan of subjecting to new forms of expression the mass of valuable matter accumulated by Dr Webster, and of rearranging it according to more approved methods. The undertaking involved so much libor, and required changes so extensive and material, that Professor William D Whitney and Professor Daniel C Gilman, both of Yale College, were soon added to the corps of associates. Tothese gentlemen was assigned the special duty of suggesting the changes and modifications which seemed to be required in the definitions of the principal words, their suggestions being submitted to Professor Goodrich Under this arrangement the work of for his judgment and decision experiment was going on till the death of Professor Goodrich. This untoward event occurred, however, before the experiment had been curried so far as to determine how much it was desirable to attempt in the way of recasting the definitions, or how much it was practicable to accomplish

> After the death of Professor Goodrich, in 1860, the direction of the work of revision was committed to Professor NOAH PORTER, who had been intimately acquainted with his views ever since the publication of tho Revised Edition of 1847, and had frequently conferred with him in respect to the execulencies and the defects of that edition, as well as the methods by which these defects might be remedied. Before the present revision was undertaken, Professor Porter had communicated in writing his views of the changes which ought to be made in the matter and form of the Dictionary; and, with a full knowledge of these views. Professor Goodneli had carnestly solicited him to undertake the entireresponsibility and direction of the work. When the proposal was renewed by the proprietors of the copyright and by the family of Dr. Webster, it could not easily be declined; for it was enforced by considerations of affection and of duty, both to the living and to the dead. But the service was assumed by him with great reluctance, as being foreign to his special studies, and incompatible with very pressing occupations. At the urgent cohestation of his valued friends the publishers, as well as of the farmly interested, and of his beloved associate the late Low Ard C HERRICA, - whose acquaintance with the Dictionary, and whose interest in it, extended back to the publication of the first edition in 1628,—he at first consented to undertake a general superintendence of the revision, but soon, by the force of circumstances, was constrained to bestow upon it a more minute effection. The collaborators already named continued their services to the end, and others were from time to time employed

for a lower or a shorter period

terms pertaining to Musical Science and Art were chiefly propere I or rewised by Lowert Mason Esq of New York but many of the articles Medical Science, Professor R Cressor Stiles of D has furnaled many carefully considered definitions and emendations The Hon J C I runtee of Salem Massachusetts who has had long experience of editor of various law publications has with great labor and eare revised the terms of Law and Jurusprudence. He has aimed to phrass these defini tions in the more exact language which is required by the advance of Local Ser nee and to support them by copines references to I gal authorties L B O CALLAGHAN LI D of Albany has revised and rewritten the definitions of such terms as have special meaning in the Roman Coth ohe Church. It having been deemed desirable elightly to condense some of the etymological articles furnished by Dr Malin and to translate por-tions of them into English, this work was committed to the care of Mr ELOUNE SCHUTLER under the direction of I refessor James Hadley of Yele College The derivation of a number of words of Indian origin has been furnished by the Hon J HAMMOND THUMBULL, of Hartford well known as a learned and accurate student of the aborginal languages of America.

To the Ray CHAPMORY GOODRICH was committed the very important duty of receiving the mass of material furnished by the most of the assistants who have been named, venfying its accuracy and then incor resistants win have been made, verying to accuracy and the boost porating it into the final copy for the printer. In this work he was ussisted for several mouths by the Rev First P Brawger and the Rev John's M Moraits. Mr Goodrich bus also revised or prepared many of the def minors in Agriculture and Horizonliure in Antonities and Arche the def minors in Agreniture and a lorizonizar in Amequates and areas tecture in Biblical meters and E. leasatted Hustory in Commerce Domestic Economy and the Fine Arts, mekin, use of the best author-lities in each of these departments. He has also brought to the scruce the results of his own asperience while laboring und y his father a gra I ance and the remembrance of his father a views and wishes in respect to many important details

It was thencht desirable. In order to secure the greatest possible accura-It was thought desirable, in order to secure the greatest possible accruy an I perfection to the copy to place it for further raws on its the hunds of some scholar of entitled liabits and approved expresses who had not been concerted in its artisp repression. Accordingly Mr. WILLELER A. WHERLEY was employed for this service and also to correct the proof theter and with him was associated, at a later period. If ARTHUM W. WHOST Mr. Wilson's also completed in a service the proof the proof of the service and valuable contributions from his smale literary at ree and given the worl throughout the bet efit of his exact learn; g and his nice discrimination Mr. William C. Webster chared with Mr. Wheeler and Mr. Wright the ford besides realing a porty of the first proofs, has examined with great care ti e final or plate proofs and the Dict mary is much the better for his detection of oversigl ts, and for the alterntums I a has suggested Valuable as instances has been received from various persons connected with the Boston Stereotype Loundry especially from Mr Thomas Hour the Reader of the establishment whose tasts experience conscientions fidelity and accurate but unproten by a scholarship have materially benefited the work

The preparation of the Appendix was intrusted almost entirely to the supervision of Mr Wheeler who has read every page of it with critical cars. The Pronouncing Countries of Scripture Asmes was wholly prepared by him, and he construted the very interesting and valuable Vocabulary of the Names of Noted Fictitious Persons Places, etc.
The full and accurate "Pronouncing Vocabulary of Greek and Lutin Proper Names was prepared with much labor and care by Professor PHOMAS A THACHER, of Yele College The Pronouncing Vocabu large of Modera (seographical and Biographical Names ' are the work of Dr Joverti Thomas of Th ladelphia, the well known editor of Lip-p neetts Pronouncing Gazetteer of the World and has name will be millicent guaranty for the retreatworthiness and valle. The Etymological Vacabulary of Modern Geographical Names was prepared by the Rev Charles H Whereher of Cambridge Mussichus tie who the Rev Charley II. WHEREER of Cambraige Measurements who also prepared the Fylmantory to calculary of Christ an Amess from maternial furnihed in purt by Charles J. Lughers Eng. of Fluidsell plan. The Falls of Arb trary S. one used in Writing and Pransfage was originally prepared by Professor Lyman and has been reversed for this add both Mr. Whilliam and Mr. William A. Wheeler, Mr. William G Webster with the assutance of several of the oth reolfaborators, have sed and greatly improved the last of "Abbreviations and Contracrevised and greatly improves it is not or "Abbreviations and Commo-tions used in Writing and Printing and the fact of Q cintions Word Phrases Proyerbs etc., from the Greek the Latin, an I Modern Foreign Languages, which were originally compiled by him a particular account of the renous vocabularies will be found in the general Inf ace to the Appendix and in the special I refaces to the locabularies

The elaborate and learned Introduction to the previ as editions has been omitted. It is not without regret that this venerable memorial of the enterprise the sagacity and the ad claral ip of Dr Webster has

instance varifully reviewed and expressly sanctioned his work. That the advance of Philological Science and the wents of the present gen A Brief Hectory of the Euclish Language designed to show its pl dolorical relations, and to trace the progress and influence of the causes which have brought at to its present condition. I refessor Hadley has also contributed his advice in respect to numerous queations philological and general, which were constently arount and has given his spection to the principles and some that have out I d the Editor and his collaborators in the changes which have been adopted in this edition. . .

. . . The Principles of Pronunciation originally prepared by Professor Goodrick for the edition of 18/ have been carefully revised and much expanded by Mr Whoeler whose attention had been previously directed espanae by his wineser wassa accomion and hear previously directed to this subject in the preparation of A flaund of Longius Framment tans and Spelling (Boston 1891) Mr Whoel r has also retweed and much salarged the Synopsis of Words Differently Pronounced by Dr Joseum Ferrent Orthoopers which was originally prepared by Dr Joseum 1 Woncester and inserted in the Octavo Abridoment of Webst re American Dictionary and which was ofterward revised by Professor

The features of the present edits it which deserve to be specially enumerated are the following -

I The Levised Etymology The feature has already be a noticed It to believed that ention readers will acknowl dge the learning the brev ity the sound paigment, the self-explaining order and the minutely traced ramifications which characterize these etymologies and it is hoped that they will attract the attention and etimulate the studies of all who denre to know more of the varied history of their mother

IL The Revis d Definitions Tie definiti na of the principal words not scientific or technical have been corefully clabe ated by Professors Whitney and G lman each possessing porular q inlifications and each performing his work as thoroughly as was possible will in the limits pre-Their work was carefully reviewed by the Editor before it was admitted into the copy. The rule which he adopted for his own guid ance was freely to accept and make any change in the matter and the ance was freely to accept out misso up coming in the suppose would be desired by Dr. Webster himself were he now hirl g and fully possensed of the principles which have been have sally accepted by modern philologists and lovie graphers or which I referent Goodnet would have sanctioned had to been able to give to the work of revision the full measure of his well known energy and arguetous judgment. In accord ance with this rule great pains have been token 1 To contract and condense the definitions into as few coneral h ads or numbered divisions, as was practs able. In this the example of Dr Coodrich, in his experi m ptal work, was followed and the I erusers have sought to avoid all redundancy and tantology to strike out all m re enumerations of parties Presentancy and cambogy to strike out all in the enumerous of particular applications of meanings end to reduce the number of illustrative phrases to the actual wants of the reader. While they have been thus bold on the day have been those student brearf I on the other to return the exact language of the earlier edition in every case possible esteem givery highly Dr. Webster's plane and clearly expressed defimittons for their own sake as well as for that of the author and preferring to err on the side of e utious reverence rather than on that of thoughtless amovation. In many cases in which the innibered articles and ra word have been diminished, it will be found that the number of real definit me has be n meterially increased and that the path ring of them into f wer groups has contril uted to their more easy comprehension and more ready me A single article often includes a group of kindred nearmers, and thus enable the reader to view at a glance their close relation an I similarity and to truce out the subtle movement of thought by which one was evolved from moth r Often too a well-chosen citytion from a good author has been preferred, as a means of definition, to on explanatory exemplocuti n. 2 An off rt has been constantly made to develop and arrange the several meanings and groups of meanings in the order of their actual growth and I intury beginning if possible with the primitive aguification as indic ted by the etymolory. As this for the primitive againstates as made set by the esymmetry. As this for many reasons has now been a possible in man rous cases in which it was impossible in the time of Dr. Webster and as, in many instances, Dr. W bater did not perfect this order will a the materials were within his reach it has been often foun I necessary in the present s lition, to clauge the arrangement of the defittions. Special consideration has been given to this point in view of the fact that the study or even the causal notice of the order of growth in the meanings of single words, is a at mu lant of thought, and the habitual attention to it is of fiself an educahought to light by on e tended examination of authors in the earlier and later periods of English literature or as they have occurred to the Levisers in perform ug their work or have been suggested by the kind Erritical an I thoughtf I friends

Ilf The Mustrative Citat as "Special off orthas been made to al lain illustrative passages from classical English writers, leth old and n w In order to collect at h passages and also to discover words and me n been displaced to make room f r naw matter more in accordance with legs that had been control in other English D climaries a systematical of literature were carefully read by many competent persons, and a copious collection of illustrative passages was placed at the disposal of the The principal dramatic anthors, and various prose writers, of the age of Queen Elizabeth, were read with care by Mr H S DANA. The plays of Shakespeare and the poetry of Milton were carefully studied by the aid of the excellent Concordances of Mrs. Mary Cowden Clarke and Mr Gny Lushington Prendergast, with particular reference to any special usage which these poets have sanctioned The most prominent in the long series of English writers, down to the latest, have been read for the purpose of selecting illustrations, especially those writers whose use of language is particularly idiomatic or classical. Sir Walter Scott, Sonthey, Coleridge, Lamb, Byron, Washington Irving, De Quincey, Macaulay, Tennyson, Hawthorne, and many others, have received as much attention as the older writers. A comparatively small portion only of the passages which were marked and copied has been actually used, it being thought undesirable to multiply such passages when they were required for no valuable end. In cases where to cite a passage would serve no purpose in illustrating a meaning or justifying the use of a word, the name only of the author has been given, provided, as in the case of words obsolete or not now approved, the authority of some writer was deemed desirable. The free use of this large and varied collection of citations will, it is thought, add greatly to the value and interest of this It is believed that no other dictionary of the language contams eo many apt illustrations from so large a variety of writers citations which have been retained from the preceding editions, as well as those introduced for the first time, have, as far as possible, been verified and copied with scrapulous care. Such passages were preferred as would throw additional light upon the definitions, or as possessed any interest of thought or of language

The Vocabulary No pains have been spared to introduce additional words, provided they were of such a character as to deserve inser-At the same time, the Revisers have been actuated by no desire to swell the list to the greatest possible number. Words which were the offspring of the individual concert of a whimsical or lawless writer, which did not conform to the analogies of the language, and which were never necepted or approved by good writers, of their own or a subsequent generation, have not been admitted On the other hand, new words which have been acknowledged and approved as good have been carefully garnered, whether used by old anthors or now A great number of obsolete or obsolescent words, which were once accepted and freely used, have been recovered by the readings and researches that were directed in part to this end. Self-explaining compounds have been designedly omitted by hundreds, if not by thousands, while care has been taken to introduce and explain all those which need to be defined. It will be observed, however, that this edition differs from the former editions in following a streetly alphabetical arrangement of all such words. The participles, participial adjectives, and verbal nouns in most cases do not appear in the vecabulary as separate words, but are given under the verbs from which they are formed, and which explain their meaning. But the participial adjectives and verbal norms have a separate place and treatment, in those cases in which they have obtained a meaning different from that which they derive from the verbs to which they belong The principal parts of the verbs, regular and irregular, are given together, within brackets, under the verb, instead of being entered and defined separately. But the principal parts of the irregular verbs are usually inserted in their proper alphabetical places, with a simple cross reference to the verbs themselves. A similar course has been pursued in regard to the comparative and superlative degrees of many adjectives, and the irregular Plurals of nouns The vocabulary, as a whole, though not constructed for any display of enumerated titles, will be found to be greatly increased and enriched. It comprises an aggregate of upward of 114,000 words.

V. The Scientific and Technical Definitions have been carefully revised and elaborated by very able gentlemen, and with the and of the best anthorities Many of the articles, it is believed, will command conf dence and cheit commendation for their scientific value, while their birrity and plain language fit them for the use and instruction of all

VI. The Collection of Sinonyme, so carefully prepared by Professor Goodrich, has, with a few slight changes been incorporated into the body of the work for greater facility of reference The number of the words thus defined and distinguished is far greater than the number of apparate articles would seem to indicate. The meanings are thoroughly dictimented in every case the words being traced from their ety-mology, and explained by formal definitions, as well as illustrated by continued examples of their various use. In addition, copious lists of synon-mone or interchangeable terms have been attached to most of the important words, for the convenience of teachers and inexperienced

VII. The Propried Educations, more than three thousand in number, have here inserted in the body of the work; in the previous edition they

plan was devised by which a large number of works in all departments | so as to avoid the necessity of any further reference, and it is hoped that the advantages of the present arrangement will be appreciated. It will be observed that an entirely new selection of illustrations has been made for this edition, many being taken from original drawings, and the remainder chiefly from works of high authority in their respective departmeuts For the artistic beauty of these cuts, the work is indebted to Mr JOHN ANDREW, of Boston, who has a distinguished reputation as au engraver on wood. It will be remembered that only a partial selection could be made of objects to be illustrated. Even in illustrated works on Natural History, it is customary to represent only a limited number of objects, and, in a work like the present, a still smaller number of such illustrations could be admitted The general aim has been to illustrate those objects of which a drawing would convey a better conception than a mere verbal description Those who use the Dictionary will not fail to observe that, to many words which are not themselves illustrated, there are subjoined references to illustrations given in cenncetion with other words, as, under Withers, it is said, "[See Illust. of Horse] 1

VIII The Vocabularies in the Appendix have been reedited, or expressly prepared for this edition by able scholars, as will appear from the full account of the Vocabularies themselves, and of the researches and aims of the authors in the special Introductions which accompany The first and most prominent, the "Vocabulary of the Names of Noted Fictitious Persons, Places, etc," by Mr. Wheeler, is a novel and appropriate accompaniment of an English Dietiouary. It is the first attempt of the kind, at least in our language, and is valuable for its interesting gleanings from history and biography, as well as for its explanations of many obscure allusions in the best and most popular The remaining Vocabularies are all the products of original and laborious research, or are trustworthy compilations from the best

IX. The Pronunciation of English words has been carefully attended to in this edition. The principles adopted are stated at length and fully illustrated in the article on the Principles of Pronunciation, which was originally prepared by Professor Goodrich, and has been elaborated by Mr. Wheeler, with suggestions from able scholars, who, as well as himself, have made a special study of English orthoepy and the seioneo of phonology. A more thoroughly practical and satisfactory treatment of the subject, the Editor confidently believes, can not be found in the len-The "Synopsis of Words Differently Pronounced by Different Orthoepists" will be found to be a comprehensive, practical, and fully trustworthy exhibition of the various modes of pronunciation given in the best English Dictionaries. The pronunciation of each word in the Dictionary is indicated by the marked or figured Key which is to be found at the hottom of the page. This Key has been remodeled and arranged with special reference to this edition, and contains some few characters additional to those of the Key previously used. The number of characters tors now employed is thought to be as large as is desirable. To attempt more is to seem to promise more than it is practicable to perform, and is, besides, open to the objection that a complex notation would not be readily understood.

X. The Orthography In this department no change has been made in the principles adopted and clearly set forth in the Revised Edition of 1847, and so generally accepted by the American public. In a few classes of words the Dictionary recommends and follows the peculiar modes of spelling which Dr Webster introduced for the sake of carrying out the acknowledged analogies of the language - modes of spelling, which, in every instance, had been previously suggested by distinguished English grammarians and writers on orthography, such as Lowth, Walker, etc. and the prepriety of which has been recognized by Smart and other recent English lexicographers. But to remove every reasonable ground of complaint against the Dietiouary in regard to this matter, an alternative orthography is now given in almost every ease, the old style of spelling being subjoined to the reformed or now. In two or three instances it has been found that the forms introduced by Dr. Wehster, or to which he lent his sanction, were based upon a mistaken etymology; and therefore these forms have been set uside, and the old spelling has been restored. Preceding this account are some Observations on the general subject of Orthography, with copious "Rules for Spelling Certain Classes of Words," prepared by Mr Wright, followed by "A List of Words Spelled in Two or More Ways," compiled expressly for the present edition. These new features give this edition of the Dictionary a great superiority over the former editions.

In conclusion, the Editor desires to express his thanks to all the persons who have assisted in the preparation of the present edition, for the fidelity and perseverance with which they have discharged their duties. It 13 to their industry, scholarship, and zeal, that the peculiar excellences of this edition are chiefly to be ascribed. Though the Editor is more sensible of its deficiencies than any other person can be, yet he does not heutate to commend it to the public for the improvements which are to an improvement to place them under the words which they illustrate, of grateful appreciation, which, he believes, will be cheerfully discharged. DIAMINEUR & MAT ONNIELL

A BRIEF HISTORY OF THE ENGLISH LANGUAGE.

By JAMES HADLEY, LL D.

PROFESSOR OF THE CREEK LANCE AGE AND LITERATURE IN NAIF COLLEGE

REVISED BY GEORGE LAMAN KITTREDGE, A. B.

HARVARD PYTERSITY

LANGUAGES KINDRED TO THE ENGLISH.

\$1 Anglo-Saxon Tentonic Indo-European To English language is the descendant and represe tatle of the Anglo-R. It has been last very much of the infection and very many of the words while he belonged to the old hangesque; and on the other hand, it has borrow d words very is gely to the e tent e n of half fite the other hand, it has borrow d words very in get; to the e tent a not hant we reaching the most ster languages emptainly the Fren hant the Latin. Yet all the infections that remain in it and most of its formatic endings, the presences and particles, and in general, the w the with a see most frequent as d familiar use-have come to it from the Anglo-Saxon. With all it mit ture of foreign elements it have come to it from the Anglo-Saxon. With all it mit tute of foreign elements it is still a Tsutonio language like the German Dutch Swedish D nish and oth ra-Those again, make one branch in that great family of languages whi h as it catend These again, make one braich to that great family of languages with he at nested from ladd vertice and over severally the entire are I. Europe is exclude John Surgeans, Arong all handless of his del torque, the ladd-European is remainded by the language of the language of the language of the language of the language of the language of the language has been seen in the language of

that the ancient Iberian did not belong to it, which was once the prevailing language of the Spanish pennisula, and which still lives, on the two sides of the Pyrenees, in the strange language called Bosque (Biscoyan, or Euscorra) Whether the Indo-European has a primitive connection with any of the adjacent families, is a question which has not been, and perhaps nover will be, decided by philological ordence. At all ovents, it is certain that between Welsh and Sanskrift, distant as they are in space and time, there is an infinitely closer connection that between the neighboring purs of Russian and Finnish, German and Hungarian, or Greek and Hebrew. It is true that some languages of our family has observed particular words from languages of other families. The English, for example, has taken from the Hebrew such words as shelel, cherub, scraph, jubilec, pharise, cabala, etc., and from some of them has formed derivatives, such as scrophic, jubilant, pharisaciol, pharisacim, cabalist, cobalistical, etc. But this borrowing can only occur where there are historical conditions that favor it—even then it has its limits and its distinctive marks, and icust not be confounded with a radical affinity between two languages. All etymologizing which assumes or implies a radical affinity between two languages. All etymologizing finnish, or the like, is, in the present state of philology, unscientific and illusory.

GENERAL FLATURES OF THE TFUTONIC LANGUAGES, PARTICULARLY THE ANGLO-SAXON

§ 14. Progression of Mutes In examining the sounds of the Tentenle languages we find that the primitive Indo-Turopean mutes have undergone a remarkable series of changes. The smooth mutes (tenues) of the parent toague, p, t, L (preserved as such in Greek and Latin), appear in Gothie vs. f, p (th), h, the primitive indidic mutes (mediae), b, d, g, as p, t, l, and the primitive medial aspirates (mediae aspirates), bh, dh, gh (in Greek ϕ , θ , χ), as f, d, g. This process, known as the Progression of Mutes, is often stated thus the primitive smooth entes pass in Gothic into the corresponding aspirates, the primitive middle mutes into the corresponding smooth mutes, and the primitive inedial aspirates into the corresponding indidic mutes. But this form of statement, though convenient us an aid to memory, is open to grave objections from a scientific point of view for example, the letters b, d, g, in Gothic, do not always stand for the sounds of the middle nutes, but in certain positions represent spirants, and Gothic f, p, h, are spirants, not aspirates. In the Progression of Mutes the other Teutinale languages agree in general with the Gothic, but the Old High German has gone one step farther, changing the Gothic b, d, g, into p, t, l, the Gothic p, t, l, into f, z (for th), ch, and the Gothic h late d. The change from b, g, to p, l, however, is unknown to the New High German. In Old High German it was conflued to certain dialects, and it had begun to less ground before the beginning of the Middle High German period. To the rules thus roughly given, there are numerous apparent exceptions (thus after s, the primitive smooth mutes remain uncluniced), but all of those can be shown to depend on special laws. The following examples will serve as illustrations of the Progression of Mutes.

§ 15. Variation of Vowols. It is a thing of familier occurrence in all the Tcutome languages, that the same root appears with a venety of vowel sounds, as in sing, song, sung, song, bind, bound, band, band. Binilar variations of vowel sound are met with in other languages. What is peculiar to the Tautonic is the frequency and regularity with which they are used as a means for the inflection and formation of words. They appear thus most frequently and regularly in the cerliest Tentonic idioms, many words which had them in this Angle-Saxon have lest them in this English. Different from these vertations of vowel is that attenuation, or change from a more open vowel sound to a closer, which we see in man, men, foot, feet, mouse, mice. This change, which is unknown to the Gothic, has arisen from the influence of a close vowel (i) belonging to an inflection anding, which has drapped off from the English men, feet, mice, but which is still heard, in a modified form, in the German plurals, man er, fixes-e, maus-e

oif from the Luglish man, feet, muce, but which is still heard, in a modified form, in the German plurals, mann er, füss-e, maus-e § 18 Numbors. The Indo-European inflection distinguished three numbers, singular, plural, and dual. In the Toutonic languages, the dual form of the neun has whell, disappeared thet of the verb uppears only in the Gothic, and there only in the first and second persons. The pronouns of the same porsons show a dual form, not only in the Gothic, but also in the Angle-Saxon thus AS and, we two, anc, us two, gll, ye two, anc, you two, but in the plural we, us, ge (yo), éew (you), as in English

\$ 27. Genders The Indo-European system of gender sessus to have commenced with some differences of inflection between the names of personal and those of Impersonal objects. Among the first, certain forms of inflection were afterward opprepriated to the names of femile persons. The result was a threefold system of sender, corresponding to the real distinctions of sex. But its character was modified, almost from the outset, in two different ways first, many objects which are without sex are thought of as heaving in their attributes in analogy to male or formate persons, and accordingly received massuline or femiline inflection, and second, in some cases, objects which have sex were thought of without special reference to sex, and accordingly received neuter inflection. Thus, the system of grammatical gender issumed to a great extent a fictitious, and even an orbitrary, character. This system had become fully developed before the separation of the Indo-Puropean family; and it is found, exentially unchanged, not only in the Gothle and the Anglo-Saxon, but even fa the medera German. In the Fuglish, on the contrary, it has almost entirely disappeared: the same forms of the article, the adjective, and even of the pronoun, are need for all kinds of objects. The only distinction is in the presonal pronoun of the thad person, where in the ringular we are special forms (he. she, his, her; hum, her) in reference to rule and female object. But in the Anglo Saxon, he is used in

excessor, the enter; hit (it), in referring to for heafod, the head, but also to hat bearn, the child, and even for wit, the woman, wife

§ 18. Cases The Indo-Turopean had eight cases, the nominative, for the subject of a sentence, the accusofite, for the direct object; the dative, for the hadrect object (to or for which semething is done), the grative, or of case, the instrumental, or with-case (denoting either association or instrument), the localite, or increse, and, finally, the roadite, or interjectional case, which does not enter into the construction of the sentence. Of these, the ablative and localive are nowhere found in the Teutonic languages. The vocative, which is not maining in the Gothie, is seened; known to the Anglo-Saxon. The instrumental, which has nearly disappeared in the Gothie, is seen in the inflection of Anglo-Saxon ndjectives and demonstratives. The remaining four cases, the nominative, accusative, dative, and genitive, are common to all the older Teutonic languages, and are still distinguished in the modern German. The English distinguishes nominative and accusative in the personal pronouns only; in substantives, it has the genitive (though in the plant commonly without a distinct form), but confines it almost wholly to the possessive relation.

§ 19. Doclensions. The Anglo-Sixon, like the offer Teutonic languages, has two schemes of noun inflection, which may be termed the Voicel Declension and the N Declension they are often called strong and read declensions. The few Anglo-Sixon substantives which do not agree with either of these schemes may be treated as momalous. But different from both is the Pronominal Declension, seen in the domonstrative and most other pronouns. One of the most remarkable poculiarities of the Tentonic is the fact that every adjective is inflected in two ways. It follows the pronominal declension when its substantive is indefinite, but if the substantive is definite, as when it is connected with the definite article, or vith a demonstrative or peasessive pronoun, the adjective follows the N declension. Thus the Angle Saxon has accoming, a when high genitive rises cynings, dative visual cynings, and man, a good name, genitive gidet inman, lative giden mannar, but ef visua cyning, the wise king, genitive piece new inject, dative pian giden nemar. This distinction of the definite and indefinite adjective is preserved in modern German, but is wholly lost in modern English. In substantives, the English still chows a trace of the N declension, in a few plurils, like oxen, children, brethren, line, though did of these, except oxen, are Old English blunders, then being misapphed to words that did not have it in the Anglo-Saxon. The familiar archael form eyne (eyes) shows a genuine Auglo-Saxon plural in n (lagam)

\$20. Voices The Teutonie verb, when compared with the Indo-European, shows extensive losses. It has but one voice, the active, having given up the middle (or reflexive) voice and the passive. In the Gothic, indeed, we still find the amount middle, formed as in the Greek, and used generally in a preserve as single rate of disappear from the inaguage. The Anglo-Saxon has preserved a single rate of the old medio-passive,—the form hitte (Goth halidde, is called, O Lag hight). In the past tense of the Gothic, and in both tenses of the other old Germanic Idloms, the pince of a pastle verb was supplied by using the passive participle, sometimes with the verb which means to be (Goth veisin, AS. vecian, or been, etc.), and sometimes with the verb which means to become (Goth veisin, AS. vecian, AS. vecian, or Scien, etc.), and sometimes with the verb which means to become (Goth veisin, AS. vecian, AS. vecian, as vecifin in vice verific the day). In all the modern Gormanic Idloms, except the Finglish, only the latter verb (Ger verden, Dutch verden, etc.) is used to make up the passive. The Laghsh alone, doubtiess under French influence, has fixed upon the verb to be for this purpose. The Danish and Swedish have a passive made by indding s to the forms of the retive. But for this s the Icelandie has st, and in the earliest manuscripts st, which is plainly the reflexive pronoun sit (self, solves) shortened and added to the active verb. Here, as in many other languages, the passive was originally reflexive.

was originally reflexive § 21. Moods and Tonses. The Teutonieverb has three fluito moods, the indicative, the subjunctive (Greek opinius, Smiskit potential), and the imperative the second of these bas, to a great extent, disappeared in modern English. It has also an infinitive, and a participle active and passive, which are essentially verbal nouns of the primitive moods, it wants only the one which is represented by the Greek subjunctive. Of tenses, it has lost the primitive imperfect, future, and norist, retaining only the present and the perfect. The reduplication of the perfect (seen in Greek λελυκα, Latin tutula) is preserved by the Gottle in a few verbs, as lathold, held, in the other ideoms we find little more than traces of its former existence

§ 22 Persons and Numbers There is good reason to believe that the personal cudings (except perhaps that of the third person plural) were in their origin pronouns, appended to the verb, and denoting its subject. The Gothic, in general, distinguishes the three persons of the singular and those of the plural by as many different endings. The Angle Sixon confounds the three persons in the plural of the indicative, and in both numbers of the subjunctive, but still distinguishes between the singular and the plural. Even this last distinction is, to a greet extent, lest in modern English. The Teutonic imperative has only a recent person.

\$ 23 Vorbs of Primary and Secondary Infloction. The Teutome verbs divide themselves into two well marked clesses, which may be called verbs of primary, and verbs of secondary, inflection they are often called verbs of strong and of secondary, findection they are often called verbs of strong and of second inflection. To the first class belong werds like fall, fell, know, know, swear, swere, drive, drove, choose, choose, he, lay, come, came, may, sang, etc. In these, the past tenss adds nothing, except personal endings, after the root or stem of the verb. They are further characterized by that veriation of the radical vowel (internal inflection), which has been already noticed os a striking peculiarity of the Teutonic. To the second class belong words like kill, rilled, he, hed, law, laid; lead, led (for leaded), leave, left (for leaved), hate, had (for haved), male, made (for maked), etc. In these, the past tense adds of (in High German, l) to the root or stem. Only a few of them have also a change of radical vawel, as sell, sold; bring, broughl, etc. In most forms of the Gotthe perfect, this d is doubled, as in laga-adedum, we laid, lag-adedup, ye laid, etc. This has been thought to be the reduplicated perfect of a verb corresponding to our do; thus laga-adedum = 1ny-did-we, we made a laying, but there are great difficulties in the way of such an explanation. In Gethic, this class embraces the derivative words, while nearly all primitive verbs heve the inflection of the first class. But the tendency in all Teutonic languages has been to increase the second class of the expense of the first. Many Anglo-Saxen verbs of the first class belong in Old English to the second thus, A8 murnon, to mourn, pf. mearn, but O Eng. morred, becam, to beke, pf. bée, O Eng. beked and bol. léesen, to bee, or bée, O Eng. beked and bol. léesen, to bee, or bée, or bee, or the first class helong in modern.

sious and capricious exceptions to a general law of inflection.

THE ADGLO-SAXON AS A LITERARY LANGUAGE

\$ 24 Name The emigrants from Germany who invaded But in in the 28th and sixth centuries ad after I mg struggles conq red most of the island press to have come in great part from the di tricts now called fleswick and Holat in on the ast ern shores of the North Sex. § 29. The Scandinavian. In the year 827, Eghert, king of the West Saxons, became the acknowledged lord of all the separate fractions into which Anglo-Saxon England had before been divided. But the united kingdom was destined to suffer seversly from a cause which had begun its work with the opening of that century Piratical rovers from the regions about this Baltic were at this period the scourge and terror of Europo. These Scandinavians - or Danes, as the Saxons named them all, whether coming from Denmark or not - infested the whole castern coast of England, not only making occasional descents, but conquering large districts, ned forming permanent settlements Alfred the Great, though he succeeded in checking their progress and in forcing them to acknowledge his authority, allowed them to remain under their own laws in this part of England, which was thence called Danelagh (Dane-low) Under his weak successors, the Daoes resumed their conquering progress, and at last became masters of the whole country. The Danish kings, Sweyn, Canute, and Hardieanute, held the English throns from 1013 to 1042 Yet the Danes do not appear to have settled in large nombers, except in the eastern part of the island. A trace of thoir existence here is still seen in Asbby, Rughy, Whithy, and many other nomes of places with the same ending, for by is the Icelandic by-r, Swedish by, Damsh by, a town, village. There is no ovidence that the Drucs of England sought to perpetuato or to extend the use of their own language. Even nuder Danish kings, the Anglo-Saxon continued to be used in public ects end laws The truth appears to be, that in Eogland, as well as in Normandy, the Seandmavian settlers did not long rotain their mother tongue, but give it up for the more cultivated idiom of the people mmong whom they settled At the same time, they did not feel to communicate some of their own words to the new speech of their adoption The extent of the influence thus exerted by the Danes upon our language, it is very difficult to determine English words which are found in the Scandinavian idioms, and are not found in the carlier Anglo-Saxon or other Low Germaele idloms, we may naturally suspect to here come in by this chonnel But the inquiry is subject to great uncortainties. The existing monuments of the early Angle-Saxon are evidently for from showing its completo stock of words, and the other old monuscents of Low Germonic idioms are by no means copious enough to supply this defleroncy. It is certain, however, that the Danish influence has been greatly overrated by those who have ascribed to it any considerable fraction of the Inglish vocabulary To this influence we may trace the verh call (Icelandic Iolla), which seems not to occur in Angle Saxon till 993 (ceallian) and for which the carbor documents use clypian So perhaps the adjective some, for though the Angle-Saxon has the word as an adverb, it olvays uses yle for the adjective (compare Scotch of that all, i e, of the same, of a place hearing the samo name as a person) Many other words (as screech, grime, bow of a ship), though doubtless in roduced at a very early time, are not found in our monuments till after

the Norman conquest, that is, till after the close of the Angle-Saxon period § 30 The Norman-French. The Normans (or North-men) were n body of Scandinavian adventurers, who, while their countrymen, the Danes, were making conquests in England, succeeded in establishing themselves on the opposite coast of France In 912, King Charles the Simple ceded to Duko Rollo and his Normon foilowers the province which took from them its name of Normondy Here they soon ceased to speak their own language, adopting that which was spoken by the native population If in this they took the same course with their Daeish kinsmich in England, the change was a much greater one in the case of the Normans, for the Scandinavian differed far less from the Angle-Saxon, another member of the eamo Teutonic family, thon from the French, which was a daughter of the Latin The dialect which thus grew up in Normand, differed in many particulars from the other dialects of the French language, and is commonly known as Norman French The influence of ths Normon French began to be felt in England, even before the Norman conquest of the country It seems to have been much used at the court of Fdward the Confeesor, who followed the Danish dynasty, and reigned from 1042 to 1065 This prince, though of Saxon birth, had speet his youth in Normaedy Whee he became king of Eogland, he surrounded himself with Normans, exciting thus the jealousy of his native subjects, who in 1052 constrained him to hanish the obnexious foreigners After his death, Duko William of Normand, load claim to the English crown, end the lard-fonglit battle of Husings, in 1066, in which Hereld, the Saxon hing, was slain, end bis ormy totally defeated, established the claim of the Cooqueror This ovent, which has affected the whole subsequent history of England, has had the most important influence on its language. It was not, indeed, the intention of William to suppress the language of his new subjects. He is said to heve made on ettempt, though an unsuccessful one, to ocquire it himself But the political ood social conditions which foliowed the conquest were extremely unfavorable to the language of the cooquered people. Their obstinate resistance and repeated Insurrections led the Cooqueror to treat them with the utmost severity They were shut out from offices Occupier to treat them with the dimest severity. They were since our home concessions of state, they were converted from exclesiostical positions, they were deprived on The court, the noblity, the landed genery, the elegy, the army, were all Norman. This Anglo-Saxoo language was banished from these circles, and the French took its place. The instruction of the schools was given in French alone. There was nothing to stimulate, there was overything to discourage, the cultivation of the native leeguage

TRANSITION FROM ANGLO-SAXON TO MODERN ENGLISH.

§ 31. Periods For five centuries after the Norman conquest, the language of Englan's was in a constant and rapid process of change. During the first of theze centuries, we may believe that it had not yet departed very widely from the earlier type. The last monomert of the old language is the concleding part of the Suron Chron'cle, lo which the history is brought down to the death of King Stephen in 1154. We can not, however, suppose that the writer of that part has used the idiom which was spoken by the people in his own time. The change by which, in grammatical endings, the older rowels a, o, u, have all parsed into e, is found in High German from the beginning of the twelfth century. It began even earlier in our language. In the second century after the conquest, the old inflection, with the change just described, is still for the most part retained, but in a state of much confusion and corruption thus is called the Semi-Suxon period. In the third century, a large part of the old inflection has disappeared, while no great proportion of French words has yet come into the language; this is called the Old Engle hepriod. In the fourth and fifth centuri s, we find a mat bedy of French words mixed with these of native stock, will be the o'l infection is brought down to that minimum which remains in the language at this day, this is called the Middle English period. It must be remembered chat the process of change was gradual and incessant the language did not remain

fixed for n time, and then on a sudden leap to n new position. Hence the periods here distinguished are in some degree arbitrary, at least an regards their boundaries, and writers may be found of the same period who are separated from each other by marked differences of language.

§ 32. Changes It is implied in the foregoing statements that the changes in our language, consequent on the Norman occupation of England, woru mainly of two kinds 1 The lors of the Anglo-Saxon Inflection; and, 2. The introduction of new words from the Freuch. The latter chango did not go on to ony great extent until more than two centuries after the conquest, yet no one can doubt that it was caused by that event. But in regard to the carlier cheaper,—the loss of the accleut infec tion, — it is maintained by some writers that this was in no degree occasioned by the coming of the Normans. A shellar change in the modern languages of Latin origin is often explained from the difficulty which the burburian conquerors of the Roman empire must have found in mustoring the complex system of Latin inflication. The explanation, whether satisfactory or not for the Romance languages, can not be applied to ours, for the change in question had nearly run its course before any large part of the Normans had begun to speak English It is true also that changes of the same nature have been made, and not very far from the same time, in the other Ger manic idloms: in each of them, the one rough chas taken the place of other vowels in grammatical endings, and in each a part of the codings have been confounded with one another, or have disppeared altogether. Whot is peculiar to the English is the rapid ity of this movement and the extent to which it was carried. No written language of Germanic stock, no unwritten dialect of any province or people, shows, even at the present day, a loss of infloction equal to what appears in the English of five imadred This striking peculiarity in the effect compels us to seek for a peculiar 3 cars ago cause, and no cause can be found so likely to produce it, as the long subjection of the English-spealing people to a people of different race and language. The tendencies and influouces which would io any caso have given a new form to the English, as they into to its sister idioms, derived additional force and greater quickness of operation from the depressed circumstances of the English people. The language shared in the sufforing and degradation which fell on those who spoke it. Used only hy the lower clossos, and regarded with contempt by the higher, shut out from the schools, from cultivated society, end, with few exceptions from works of literature, it was left w thout etandards of correctness, it was deprived of those conservative influences which might otherwise have retarded the progress of change and disintegration

§ 33. Semi-Saxon Poriod, 1150-1250. The Anglo-Saxon inflection is still in a great measure retained, but with e instead of other vowels in the endings, and with much confusion and irregularity of use. This period is represented chiefly by four works 1 The Brut of Layamon (Layamon), a long narrative poem, which recites the early fabulous history of Britain It is a free translation, or, more truly, a working over, of the Roman de Brut, composed in French by Waco, and finished in 1155 Layamon was a priest, who lived at Ernley, in North Worcestersbire, near the close of the twelfth century His work consists of 32,000 short lines partly alhierative, like the Angle-Saxon verse, partly rhymed, like the French original, both kinds being very loosely constructed and irregularly mixed together. A second manuscript of the poem affords an instructive example of the way in which older writings were wont to be modernized in successive transcriptions, it is, porhaps, half a century later than the first, and shows a text which is much altered, and decidedly more modern 2 The Ormulum, as it is called by its author, an Augustinian monk, from his own name, Ormin, or Orm The poem—or what remains of it—contonis nearly 20,000 short lines, and consists of thirty two parts, founded on snecessive gospel selections in the daily church service, the narrative being first set forth in a loose para-phrase, and then followed by homilotic comments. The verses are arranged in complets, with a line of eight syllables followed by one of seven they are constructed with much regularity of accent, though without either alliteration or rhymo The ineguage of the peem is more like modern Eeglish then that of the contemporary Layomon, but this comes from its heing written in a different dielect. Its oppearance is rendered uncouts by a poculiarity of spelling, which is not nitbout seterest and value to the philologist it earries out consistently the tendency of Eeglish or-thography to double the consecant which follows a short vower thus, and, this, after, under, are spelt, annd, thiss, afterr, unnderr 3 The Ancren Rivle, or rule of fomalo enchorites, n prose work by an unknown author, contoining n code of monastic regulations for a honsehold of religious ladios. Owing, perhaps, to the nature of its subject, it shows a considerable number of words borrowed from the Fronch and Latin, while in the works before named such words are altogether rare. 4 A met rical paraphrase of the hooks of Genesis and Exodus - It must not be forgotten that during this period each of the Aegle-Saxon dialects was continuing its own course of development or decay The confusion and distress reigning in the North of England were such that we have no memorials in the Northern Dielect during most, if not the whole, of the Semi Saxon period The Southern Dialect, however, has come down to us in an nimost nubroken series of works, including the Aneren Riwle and various homlies and lives of salots, while the Midland Dialect (the descendant of the ancient Merclun) is represented by the latest portion of the Chroniels (1124-1154), by the Ormulum (about 1300), and by Genesis and Exodus (about 1240) The great work of Layamon is referred to the Wort Midlaed Diricet

§34. Old English Period, 1250-1350 Here the Angle-Saxen inflection is to a great extent disearded, but only a moderate proportion of words is yet adopted from the French The principal monuments are 1 A proclamation of King Henry III, issued in 1253, a short but bighly important document 2 A series of metrical remances,—Kyng Alisaunder, the Geste of Kyng Hern, Havelok the Dane, and others, which belong to the latter part of the thirteenth end the beginning of the fourteenth century. They are composed in rhymed verses, and are most of them founded on French originals. The pretty poem of the Owl and the Nightingale belongs to the first half of the same century. 3 The long rhymed chronicle by Robert of Gloucester, who flourished about 1300, and the still longer one by Robert Manning, or Robert do Brunne, who wrote some years later. Both those writers traverse the whole field of English instory, mythical and ventable, from Brut and his Trojans down to Henry III and Edward I. There is also a collection of lives and legends of the saints, which is ascribed (but on insufficient evidence) to Robert of Gionecster. 4. The Gurser Mindi, a rhymed series of Bible stories, legends, etc., covering the seven ages of the world, and containing obout twenty-five thousand lines with some five thousand more by way of appendices. 5 The Avenbite of Invit (the Agan-brite [i.e., Remorte] of Conscience), a translation by Dan Medical of Kent, preserved in an autograph manuscript of 1340

Throughout this period Eegheli was in a state of great dialectical confusion. The

mean between the two servences. Of the works one strated the Proclam flor and mean between that two extremes. Of the works and seriest to Proches Him and

The feetions for the by his with the presented absention by historial abolius. The feetions for the by his way is encluded with emoure by foresse without in the feetines of Foundational F

Browne, whose own style is in a large measure Latin, remarks, "If elegancy still proceedeth, and English pens molatuu that stream we have of late observed to flow from many, we shall within n few yours be fain to learn Latin to understand Eaglish, and a work will prove of equal facility in either " The practice of adding to the English vocabulary v ords adopted from the Latin and the Greek is still carried on with activity, and there is little prospect of its ceasing It is almost necessary as a means of denoting those now objects, ideas, and relations, which are continually appearing and demanding expression The resources of the English for the formation of new words from elemonts already existing in it are so hanted that aid from other languages is indispensable. The new terms which are required by the progress of seience are almost whelly drawn from these sources, especially from the mexhaustible storohouse of Greek expression

THE ENGLISH A COMPOSITE LANGUAGE

§ 40. Proportion of the Elements There is no longuage, probably, in which all the words are formed by its own processes from roots that originally belonged to it What is peculiar to the English is not that it has words borrowed from other languages, but that It has so many of thom, that a large part of its vocabulary is of foreign origin. In this respect it may be compared to the modern Persian and the Wallachian. The French words which have been ingrafted on the native English stock are, with few exceptions, derived from the Latin, and whon added to the almost equal number which have come directly from that language, they make, perhups, four fifths of all our borroued words Much smaller, though still considerable, especially in scientific use, is the number of words taken from the Greek. The remainder of our foreign words can hardly exceed a twentieth part of the whole vocabulary, and are drawn from a great variety of sources - Celtie, Daaish, Dutch, Hebrew, Arabie, Turkish, etc If all the words in a large Euglish dictionary word classed according to their origin, it would appear that the foreign or non-Saxon words mal on decided majority of the whole number. It must be remorked, however, that in such a dictiouary there are many words which, though perhaps put forward by distinguished writers, have never established themselves in general use , and also many words which belong, indeed, to the established phraseology of particular sciences and nrts, but are unknown to the great majority oven of educated people In both classes the number of loreign words is disproportionately large. Hence, if we take all the distinct words used by particular writers, we sholl find a different ratio between the Saxon and foreign elements. Of those used by Shakespeare, it is said that sixty per cent are of boxon origin, and the ratio is about the same for the common version of the Bible But in most literary works of the last two centuries, the foreign element is certainly larger in genorm, doubtless, it would be found, if reckoned in this way, to equal or exceed the Saxon But if, instead of counting only distinct words as they would be given in a vocabulary, we count all the words of a writer as they stand on his piges, we shall obtain very different ratios The Saxon werds will now be found in a large majority, varying from sixty to more than innoty per cent of the whole number. The style of Johnson abounds in words of Latin orper cent of the whole number The style of Johnson abounds in words of Latin origin, but in the Preface to his Dictionary there are seventy-two per cent of Saxon words. In Milton's poetled works about two thirds of the vocabulary are foreign, but in the sixth book of Purndise Lost, four fifths of all the words are Saxon explanation of these appearances has in two facts 1 The words which belong more to the grammer than to the lexicon -which express not so much conceptions of the mird as the relations between its conceptions—are almost wholly Saxon To this class belong articles, pronouns, odverbs from prenominal roots, nearly all prepositions and conjunctions (only sore, except, during, concerning, because, and n few more, are French) These are words which occur in every sentence. In a language, like ours, of scanty inflection, it is hardly possible to form two consecutive sentences The substantial elements of the proposition, nouns, adjectives, verbs, may all be obtained from abroad, but the connecting links, which must unite them in the frame work of sentences, can be found only at home 2. If we turn to these substantial elements, and fix upon the objects, qualifier, states, and actions which most frequently present theauxilves to the mind, and thus call for the most frequent expression, it will be found that n large majority of them are denoted by words of faxon origin. We refer to objects, such as man, horse, bird, body, flesh, blood head, hand, heart, to it, mind, heaven, turd, rain, day, turner, woler, stone, gold, feld, tree, apple, etc., to qualities such as good, all, long, short, cold, hal, hard, toff while, black, etc ; to sections, such as to be, sit, stand, walk, run, da, say, have, break think, feel, love, fear, fird, etc. There are borrowed words of similar meaning, as lear, exple, reir, fice, spirit, air, hour, and mn, river, gem, fruit, flower, etc.; liver, false, ten ler, pure, purple, etc., to move, erter, to ch, please, enjoy, etc., but they are allogether fewer, and generally of less frequent occurrence. The words for tembers lower than a million are all Saxon among the ordinals only second has to be in from the French.

141 Fusion of the Elements The foreign words that have come into our lanraye do not sturd by the medices as a distinct and independent clars they are Andria, subjected to kepiloh laws and analogues, and thus assimilated to the older cruis neef the language. This has taken piece chiefly in three ways. I They are in mant cases second according to English analogy. This assumption of a new acdrain meet the language et " las been a gradual process. In early I'nglish poetry we find cuntre (country), the new constraints and process. In early 1 agust poerry we ame connect (country), every see and charles, presentence being consistent, careful (castle), etc., accentred as in French on the novel keep marked. The magneth, mandre (manner), country had marked as from a front of facilities, pendance, anagusth, mandre (manner), country (country), a logic copage), etc., he often gives, as have marked, with the French accentry yet red unfrequently he will be think arrows, according to Equiph tender of the french accentry to the French accentry to the best accentry to the process of the second of the sec eles to mand the beginning at the went eves to ward the beginning of the word. In the next centure the French accent to wall to see a lot with a greater prevalence of the Roplas. And the latter had estel sid of fissil in Frakesprare's time nearly as at the present day. A rumbof person of a heaven a rest in the French amont, when used as occups exchange to for an Implify early than despit and to depend on only and to comety and to to any relative to the terroral words are declined resurding to Erelish analogy. It is

(such fellows as have seen learned men in their days), will so Latin their tengues, that the simple can not but wouder at their talk, and think surely they speak by some revelation." In like manner, an nuthor of the next century, Sir Thomas receive prefixes which come from the Sixon, as in be-sicge, un-pretending, mis-century. cerce, under-raine, over-turn, after-piece, out-line, etc ; or formative suffices which come from the Saxon, as in large ness, duke-dom, false-hood, apprentice ship, useless, grate-ful, quarrel-some, fool ish, etc. It infords a still more striking evidence of the fusion which has taken place among the elements of our language, that the process here described is in many cases reversed, that particular endings which were found in the leroign words, have become so familiar to the English our and mind, as to be disjoined from their connectious, and applied with more or less frequency to words of notive stock Thus, we find Saxon words with Latin or I rough profixes, as in en-dear, die belief, re-light, inter-mingle, trans-ship, eto, and Savon words with Latin or French formative suffixes, as in forbear-ance, bond-age, afone ment, threv-ery, stream-let, cal able, bure-cl, murder-ous, etc

§ 42 Different Character of the Elements. It must be admitted that the fusion of which we have spoken is not a complete one. The borrowed words, taken as a class, living peculiar character, which separates thom, even to the feeling of unedu-There are, indeed, particular cases in ented persons, from those of matico stock which the ordinary relation does not hold, there are some in which it is actually inverted, as in sign and tolen, color and hue, power and might Hero the familiar sign, color, power, are from the French, and the more poetical token, hue, might, are, from the Saxon But in general the Saxon words are simple, homely, and substantial, fitted for overy-day events and matural feelings, while the French and Latin words are elegant, dignified, and artifieral, fitted for the pomp of rheterie, the subtility of disputation, or the courtly reserve of diplomacy The difference arises partly from the fact already noticed, that the most familiar objects, qualities, and actions have generally retained their primitive Saxon designations. The foreign words been an generally retained their primitive Saxon designations supress derived from the courtiers and scholars who introduced them. To a great extent they stand for conceptions which belong especially to disciplined thought and cultivated feeling But the difference, no doubt, depends also, on the impression which the two classes of words make upon the ear The Saxon are shorter, in great part menos, llobic, and often full of cousonants, while the French and Latin words are longer, smoother, and have greater breadth of vowel secunds 'It can not well be denied that this marked diversity of character between native and foreign words gives to our language a somewhat heterogeneous and incongruous aspect. Yet it furnishes means for great variety in the expression of the same thoughts, and serves to distinguish and individualize the styles of different authors. Among writers who in this respect occupy an extreme position, may be named, on the one side, Bunyan, De Foe, Franklin, and Cobbett, on the other, Hooker, Milton, Johnson, and Chalmers

§ 43. It has been observed that in the Liturgy of the church of England there is a parked tendency to couple I reach and Saxon expressions of the same, or nearly the same, morning thus, "to aelnowledge and confess," "by his infinito goodness and mercy," "whon we assemble and meet together" A similar tendency has been pointed out elsewhere, as in the writings of Hooker

§ 44. It was natural that when a multitude of foreign words were brought into our language, many should colocide lu meauling with words that already belonged to it. In some cases, as in uill mid testament, yearly and annual, begin mid commence, ete, the two words have continued to be used with searcely any difference of mean-But the tendency has been to turn the new material to good account by giving to the words of each pair senses more or less clearly distinguished from each other In body and corpse, love and amour, work and travel, sheep and mutton, etc , the distinction is n broad one in Geom and flower, luck and forlune, mild and gentle, ten and gain, etc., it is slighter and more subtile. The discriminations thus established have added much to the resources of the lauguage, giving it a poculiar richness and deliency of expression

THE ENGLISH POOR IN FORMATION AND INFLECTION.

§ 45. Power of Self-development lost. The English has lost a large part of the formative endings which beloaged to the Anglo-Saxon Many which still appear in English are confined to the particular words that now have them, and can no longer be used in the formation of new words. Only a very few (as -cr, -ing, -ness, for substantives, -y, -inh, for adjectives, -en for verbs, -ly for edverbs) continue to be used with much freedom for this purpose Bo, too, many prepositions and particles which were once freely employed as prefixes in the formation of compound cerbs, are as longer used in this way. From the simple verb to stand the English makes underloager used in this way From the simple verb to stand the English makes under-stand and withstend, the Angle-Saxon had atstandan, bestondan, bigstondan, forslandon, foreslandan, gestondan, 68 tlandon, understandon, widstandan, ymbstandan This deficiency in Taglish is made up in a measure by the use of separate particles, us, to stand up, to stand off, to stand by, to stand to, etc. Still the formative system of the language has become greatly restricted. It no longer possesses the unlimited power of development from its own resources which we see in the Anglo-Sexon and in the modern German If a new word is wanted, instead of producing it from elements ulready existing in English, we must often go to the Latin or the Greek, and find or fashion there something that will answer the purpose By this process our language is placed in a dependent position, being reduced to supply its needs by constant bor-rowing. But it is a more serious disadvantage that he order to expression ideas we are obliged to translate them into dead landuages. The expressiveness of the navterm, that which fits it for its purpose, is hidden from those who are manquainted with the classic tengues, that is, in many cases, from the great body of those who are to use it. To them it is a group of arbitrary syllables, and nothing more. The term thus loses its suggestiveness, and the language suffers greatly in its power of quickenin; and siding thought.

\$49 Freedom of Position restricted. It is one dissilvantage arising from the less of infection that our language is much restricted in the porition and arrangement of words. The result is unfortunate, not only as it tends to memotonous uniformity of expression, but still more as it takes away the best means of representing emphasia, or the superior looportance of a particular word in the sentence. The sin 1's Ia'm sentence, "at z repen deceptl," may be arruped in six different orders without doing violence to Latin idion, the choice of one order rather than applications. the this entire the entering properties of the entering property is a product one the entering property in the entering property is also not be entering the entering property in a product one that it is for any first product of the entering product of the entering of th

demands of n phasis thus the king was deceived by the general; It was the gen ratio ho d ceived the king it was the king who was deceived by the gen erail" advertion was practical by the general on the king sic full, with all u i h los, we as a citen obliged to indicate by the 1 may d vice of Ralas letters what a more highly I facted in gu go could be a shown in the position of the words. It should be said however in justice to the E glub that it uses not by all the free. dom of arra gence t which scantily inflected as it is, would be consistent with personality. It is therefore america in actual variety of arrangement to the French and perhaps not inferi z to the more highly inflected flerman whi h in the ordi nary prose style has limited its natural freedom by theon swient and cumbre restrictions.

\$47 Economical and Want of Emphory The loss of infacti c has red cod a multitude of Engli h words to the form of immorthalies. It is not a non-to-fine to d whole sentences with h not it in no word of greater length. This pac Barries helps us to understand better than most other nations a cabt to da, that primits o mone ylisble rendition which must be a preceded all infected language - condition which has remained unchanged to this day in langu gas ith the Chinese where ayliable is a separate word with its own acce t and its own thintly apprehend meaning. If this monosyllable character gt a corrain plain directness and plat y force to English supression it can hardly be doubted that it is a duad antege to ea phony and rhythm. Pege completes that ten low words oft creep in e as dall line And no one can read Cin cer a poetry proton cing the u accented e as the verse requires, and as it as actually pronoun od in the poet time without regretting that a burried and lur i g pronunciation of our fathers should be d stroyed this please g feeture of the old language. EARLY ENGLISH INFLECTION.

§ 147. The periods in the history of our language which are known as the Old English and the Middle English differ chiefly in the vocabulary, in grammatical points they are not so far unlike as to require a separate treatment. One can be bru for Lere, as the inflectional system is now reduced more nearly to its modern propertions, and in the Ormilum, which, though written about 1200, stands, by virtue of its more northern dislect, far her than Layamen from the Anglo-Saxon, we have already seen much of what is most striking in early English inflection. The molect will be to represent especially the language of Chaucer in its characteristic feats res-

3.148. It must be observed at the outset, that the unscented final se, which is sleet in modern lengths, was generally pronounced by Chaucer A multi-sude of apparent exceptions are accounted for by noticing these two peculiarities in this poet's Apparent exceptions are accounted for by noticing these two peculiarities in sou pour overse. I. The unaccented final expectably united in one spitable with a rect word at the interrings of the rest word, and this union takes place, even when the rest word in a per nouncer adverb with minal h, or a form of the rest to here. 2. As unaccented that-er is often treated as a part of the preceding syllable, its e belong suppressed, expectally where a vewel or histories in the rest word; and sometimes an unaccented

§ 141 The i of these verbs is lost in O, thus, malenn, subj. male, for moken, malie, lufenn (A luvien), to love, oppnenn (A. openien), to open, spellenn (A spelien), to declare In the sing imp, e is sometimes omitted, a 3, mace, in O, for male, loc, O, lol, B, though both have also lote, from lotten (O lokenn), to look.

§ 142 From leaven (pronounced leavien), or libben, to live, A makes pres 1 leave, libbe, 2 leavest (O lifesst), 3 leavest (O lifethth); perf leaved From habben, to have, come pres 1 habbe, 2 houest, hafest, 3 haueth, hafeth, pl hobbeth, subj habbe, perf hafde (also hauede in A., hadde in B), pass. Part haued

In the lnd 1st sing, O has only amm In B and O, co is often contracted to e; thus, O has best for beost, and ben, beth, as well as been, beoth. In the perfix
O writes were, werenn, instead of vere, veren, but in the had 2d sing it has
wass, wert. The plural, sunden, is not found in B, which uses beoth, beth, instead
O has sundenn, but uses also arrn (Eug are). The subj sing st is still found in
O and A, the plur seen in A. In the imperative sing A has also see

(b) gan, d inf ganne, pres (1 ga), 2 gw t (0 gast), 3 geth (0 gath), pl gath, ga (0 gan), lmp ga, pl gath, p act ganninde (B goinde, goinge), pass gon In all these forms, B has o for a A verb zeongen (B zongen, O ganngenn) is also used in the present, and A and B have a perf gengde or geinde. The common performs the common performance the common performance the common performs the common performs the common performance the common performa is code (O 3code, B 3cde) In frequent use, also, is the perf uende, went, from the regular verb u enden

(c) don, d inf donne, pres (1 do), 2 dest (B, O, dost), 3 deth, doth, pl doth (O don), lmp do, pl doth, perf dede, dude (O dide), p act donde, pass don. § 145 O Soveral verbs vacillate between primary and secondary inflection, as, perf beth or besede, from busen, to bow, perf for or feede, from faren, to fare, perf pl heo clumben, B hu clouden, from clumben, to elimb

The verbs fen, to take, hon, to hang, make presont forms from these roots, as, un-The verbs jon, to take, non, to hang, make presont forms from these roots, as, and derfolh, they undastake, but from fangen and hangen, the perfects feng, leng. The verb standen (O stanndenn) rankes perf stod, pl stoden, part stonden (O stanndenn) § 146. D The following verbs of secondary inflection are bregular thenchen (O thennkenn), to think, perf thohte, part thoht, thuncheth (O thinnkethth), seemeth, perf thulte, teuchen (O wirrlenn), to work, perf wrothe, part wroth (in A also workle, workl), buggen (O biggenn), to buy, perf. bohte, part boht; bringen, to bring, perf brokte, part brokt

final -en or -eth is treated in the same may Many of the exceptional cases are undoubtedly attributable to variations and corruptions introduced by the transcribers

SUBSTANTIVES

§ 149 Nominative Singular Where the Anglo-Saxon had a final vowel (a, e, n, u) in the nome sing, the early English (like the Semi Saxon) has -e, ns, oze, heree, ere, herde, lawe, elde (AS oza, ox, heore, heart, eare, ear, herede, (shep)herd, tagu, law, teldu, ngo)

Liven where the Anglo-Saxon had a final consonant, most feminio winds have an added e. as, dede, sorwe, youthe (AS did, deed, sorh, sorrow, proguo, youth), but the verbals in -ymg de not generally add -e, as, conving, less eften connynge, cunning An unerganic -e is also found in the nominative of some masculines and many neuters thus, were (but also were), date, etc. In Chancer these first e's are not unfrequently suppressed in pronunciation, and occasionally, after two consonants, in writing thus, heric is cometimes treated as one syllable, and sometimes

written hert
§ 150 Genitivo Singular The gen sing ends in -es, as, linges, names, from
Ling, name. In Chaucer the -es is almost always a separate syllable Genitives

without are sometimes found 1 accords see with earlier modes of infection 1 as, myn h rie blood his lady grace, hir fi fer hot a but h ren bi g AS, beefon-cyal is properly a compound word

\$ 151 Dative and Accusative Singular The ere sing leelways blotthem to the d t, sing is use ally so. B t where the nom, ends in a common a dati a in -e1 often found with prepositions spe tally at the end of a line in ran as, to bedde

with g life in house o t of his sleepe from hel gold home stery
3152. Plural, The plur has eath all the cases an norm gen dat nor k nore dedes salp no trufes na es hertes (AS nom pl cyninges del acipit tif names Acortes) In Cha seer the plural often cude in a sions for as prose as a), especially where two or more syllables preced [s, shoo pilgryms love s frankeleyns streamles (promou oed servials). Some words still retai the plant of the old V declensions as agen even (yes) such a falso scale) shown falso shoor) etc. while sum others take -s by mi taken a slocy as bretheren a stress (and surre), children (also child e erchildr) lyn (kin) atc. Brom word with word of no try go dri the AS, make the plue like the ig as, pl. dr. good where some (win) file (right,) to (to he or) try (goth you per (expensive). The plurels with change of rowel are fet grees as n teeth sid. as in modern English.

\$183 If the end har we for white not need to the norm of it is added to form the gen. pl. 1 as, folkes severs mennes spales sevenmens co ze les

ADJECTIVES

\$ 186. Adjectives are inflected as in the Ormul m: the pl. of the field site adjective and both mu be a of the definite on its -c as young man you per men. I Connect this flection is almost cot fined to monosylables nearly all adjectives of two or more syllables, and of course all adjects on that and in -e are uniform to come all adjects on that and in -e are uniform. aspect in that and is - are un nected in occas has meanwhat is and traval askets in the sing sepecially after prepositions in bod renames of persons. O the other hand -so of the lad finit pt ral is sometimes omitted when the adjust is in a presist t as steps were gid in profitate participles fashnoss. slway undeclined.

§183 From an interpolation made by King Alfred in his translation of Orosius (the extract here given is preserved in a contemporary MS, and therefore gives a trustworthy representation of the West Saxon dialect of the ninth century)

Ohtero side his liliforde, Alfr de cyninge, pet he calra Nordmonna nordmest bûde. He ewed pet he budo on pemlaude nordweordum wid pa Wester. He sido peah pet pet land sie swidd lung nord pouan, ne lit is eall wiste, bûton on feavum stownin styccemillum wildd lunnas, on luntodo on wintra, and on sumora on fiseade be pa ro si. He side pat he at summe erre wolde fandian hu longe pat land nordryhte kige, 63de hwwder dung moun be nordan paim westenne budo

Translation. — Olitere said to his lord, king Alfred, that he dwelt furthest-north [northmost] of all Northmen—He said [quoth] that he dwelt in the land northward along the West Sca.—He said, though, that that land extended [was] far [long] north from there, but it is all waste, except that in a few places here and thore Finns live, hunting [in hunting] in winter and in summer fishing [in fishing], by that sea.—He said that he on one occasion wished to explore how far that land extended due north [how long that land lay 1 orth-right], or whether any man dwelt north of the waste.

\$184. From the Anglo-Saxon version of Matthew (about the year 1000), eighth classer, verses 1-10

Sidlee pt se H filend of pim munte nyoer-astah, pi fyllgdon him mycle mende his greath hie in hreono to him and hine to him gre-asmedde, and pus ewas Drinten, gri pu wylt, pu milt me geleinsam pi astrehte se Helleud his hand, and hirpode hyme, and his ewa's is wylle, be geeleinsed. Translatton — A D 1007

gersuman unatealiendhee

Translation — A D 1087 — . This being thus done, the king William returned ngain to Normand. A rineful thing he did and a ruefuller befel him. How menuler? Ho [lit., to him] grow-ill, till that it strongly ailed him. What, may I tell? The sharp death, that does not lot-pass neither rich men nor poor, this took him. He died his Normondy on the next day ofter the nativity of St. Mory, and men [man] buried him in Caen at St. St. phen's minister, earlier he up-reared it, and intervard [sithence] manifoldly enriched [conferred goods-out] it. Alasi how loose and how unstable is this mid-world's wen! Ho that was corlier powerful king and monly a land's lord, he had not then of-all land but seen feet measure, and his that was whilton clothed [shrounda] with gold and with gems, he lay then covered-over with mold. He left after him three sons. Robert was nomed [hight] the cliest, who was carl in Normandy after him, the other [second] was nomed William, that bore after him in Figland the crown [legal-helm]—the third was nomed Henry, to-whom the fether bequeathed treasures immunerable [un tell-able]

§ 196. From Den Michel's Ayenbite of Inuit. [Dialect of Kent, 1340 ]

Thy so by eth tho tuolf articles of the eristeno by leue, that eeh man eristen ssel y loue stedeuestbehe, nor otherlaker ho us may by y horzo, hummo ho heth wyt and seelo And therof by eth fuelf, by tho talo of the tuelf apostles, thet hise zette to hyealdo and to loky to allo thon thet wyletb by yborzo. The norsto article is theilich: "Ich belone mo God, the under almust, scoppers of henene and of orthe." This article zotts sayuto Peter Thio other article belongeth to the zone, aze to his god hede, thet is to zigge, thet ho is God, and is theilheh "Ich belene ino Yesu Crust, oure thord, Godes zone, the mader, in alle thinges the belongeth to the godinede, and is calepi thing mid the nader, bete of the persone that is other thanne the persone of the under" This article zetto sayu Ion the godspellere Thy so by eth the tuelf articles of the eristene by leve, that eeh man eristen seel y love

of the mader. This article zette says ion the godspellere

Translation — These are the twelve mrticles of the Christian behef, that each Christian man must [shill] believe steadfastly, for otherwise he can not be saved when he hath understanding [wit] and reason [skill] And of them [thereof] are there twelve, according to [by] the number [tale] of the Twelve Apostles that impointed [or composed, set] these for all those that wish to be saved to hold and to look to The first article is this. "I believe in God, the father almighty, creater of heaven and of earth." This inticle Sunt Peter composed. The second article pertuneth [belongeth] to the Son, is to his godhead, that is to say that he is God, and it is this. "I believe in Jesus Christ, our Lord, son of God, the Father, is all things that pertain to the godhead, and is one and the same thing with the Father except as regards [but of] this person, which is other than the person of the Father."

This article at John the Evangelist [gospeler] composed

§ 197 Trom the beginning of Langland's Piers Plowman [Mixed dialect, Midland and Southern, middle of fourteenth century ]

In a somer seson whom soft was the some, In a somer seson whim soft was the soline, I shope in en a shroudes as in I a sleppe 2 were, In habite as in hereinte unholy of workes, When wyde in this world wondres to here Ae 3 on a May morny ingo on Malverne hulles Me byfel a ferly' of finity into thoughte I was wery for-wandred and went me to resto Under a brode hanke by a bornes side, And as I lay and lened and loked in the wateres, I slombred in a slepting, it sweet as omery 6 And as I lay and lened and loked in the wateres, I slombed in a slepying, it sweyed so merge for Thanno gan I ineten a mervoilouse sweenes for That I was in a wildernesse, wisto I never where, And as I bihelde into the est on linegh to this sonne, I seight a toure on a toff strichlebe y-maked. A dape dale binothe, a dongeon thereinne, With depe dyches and derko and dreidful of sight A fairo felde ful of folke fond I ther bytweine, Of allo maner of men, the mene and the riche, Worchying 10 and wandrying as the worlde asketh.

1 shope me in shroudes, put me into clothes 2 shepe, shepherd 3 are but. 4 feely, strange thing 5 sv eyed so incrye, sounded so pleasant

0 rwerene, dream 7 seigh, saw 8 igit hill 9 trickene y maked excellent made 10 worchyng, working

§ 198. From Wyclis's Translation of the Bible, the first ten verses of the eighth chapter of Matthew [Midhaud dialect, about 1380]

lorsothe when Jhesus hadde comen doun fro the hil, many cumpanyes folewiden hym. And loo's leprouse man eummy age worshipide hym, sayinge. Lord, lifthou wolt, thou maist male me elene. And Jhesus holdynge forthe the head, touchide hym, sayinge. I wole, be thou maist elene. And amoon the lepre of hym was elensid. And Jhesus suith to hym. See, say thou to no man; but go, showe thee to prestig, and offree that Moyses commundide, in to witnessing to hem. Sothely when he hadde entride in the Capharmum, centurio nelyide to hym, proyinge hym, and suide. Lord, my child lyeth in the hous sile on the palue, and is yuol tourmentid. And Jhesus saith to hym. I shall cume, and shall hele hym. And centurio amswerynge suth to him. Lord, I am not worthin that thou entre vaidin my roof, but oouly say by word, and my child shall be held. For whi and I am a man ordeynd under power, hayinge under me kulyius, and I say to this, Go, and he goth, and to an other, Come thou, and he cometh, and to my seruanit, Do thou this thing, and is for the Sothely Jhesus, heerynge these things, wondride, and saide to men suyinge him. Trewly I sayo to jou, I fond nut so grete feath in Ysrael.

goith, and to another, Come, and he cometh, and to my seruaunt, Do this, and he dolth it. And Thesus herdo there things, and wondride, and sende to men that sueden him. Treuh I sero to you, X found not so greet feith in Israel

§ 200. From the Prologue to Chaucer's Canterbury Tales (I tlesmere MS)

Whan that Aprillo with hise schoures soole? The drogito of March hath percod to the roote, And britised every veyno in swich heour, Of which verth engendred is the flour,—Whan Zephirus eek with his sweto breeth Inspired bith in every holte and heeth. The tendre croppes, and the yongo sonne Hith in the Ram his half[c] cours y-ronne, And smale foweles maken melodic. That sit pen at the nyght with open eye, So priketh hem nature in here corages Tham olongen folk to gon on pilgrinage[s]. And palmers for to seeken straungo strondes, And specially, from overy shires endo Of Fingoloud, to Cumturbury they wende, That he hath holpen whan that they were seeke?

§ 201. From the Tale of Melibeus, in Chaucer's Canterbury Tales (Ellesmere MS)

A yong mmi called Melibeus, my ghty and riche, blgat upon his wif, that called was Prindence, a doghter which that called was Sophic Upon a day bifel, that he for his desport is went into the feeldes hym to pleye His wyf and eek his doghter hath he lold limith his hous, of which the dorrs weren fast y-shette Three of his olde foes han it especia, and setten laddres to the walles of his hous, and by wyndowes ben entred, mid betten his wyf, and wounded his doghter with fyre increal woundes, in five sendry places, this is to soyn, in hire feet, in hire handes, in here crys, in lur nose, and in hire month, mid leften hire for deed, and wenten awey

§ 202 From Tree isa's translation of Higden's Polychronicon (vol 11, p 161) [South English dielect, 1885]

Iohn Cornwaile, a maister of grammer, channed the lore in gramer scole and construction of Frensche in to Englische, and Richard Peneriche lorned the manere techings of hym and othere men of Fenerich, so that now, the zere of correlations and three himself and foure score and fyve, and of the secounde frag Related after the conquest nyne, in allo the gramere scoles of Engelond, children levelt Frenche and constructh and beneth an Inglische . Also genthi men haveth now mocho della for to tech hore children Frenche. mocho s-left for to teche horo children Fronsche

§ 203. From Caxton's Prologue to Mulory's Morte d'Arthur. , [1485]

S 203. From Caxton's Protogue to Matory's Morte d'Arthur. [1455]

For it is notoyrly knowen thorugh the vayurersal world that there been ix worthy and the best that ener were, that is to wote, three payra and, the Jeyes, and thre crysten men. As for the payrayms, they were tofore the hierarnaeyen of Cryst, whiche were named, the first Heeter of Troye, of whome thystorye is come bothen in blade and in prose, the second Alpaninder the grete, and the thyrd Julyus Cezar, emperour of Rome, of whome thystoryes betweel kno and had. And as for the three Jewes, whiche also were tofore thynermaeyon of our Lord, of whome the fyrst was due Josue, whyche brought the ebyldren of Israhel in to the lende of by hesto, the second Danyd Lyng of Thermsalem, and the thyrd Julas Machaeus, of these three the The Bylo reherceth at they noble hystoryes and actes. And sythe the sayd merimegon have ben three noble crysten men stalled and admytted thorugh the vayuersal world in to the nombre of the ix besto and worthy, of whome was fyrst the noble Arthur, whos noble actes I purpose to vryte in thys present book here felowing the secondo was Charlemaja, or Charles the grote, of whome thystorye is had in many places bothe in Frenssho and Englysshe, and the thyrd and last was Godefray of Boloyn, of whos actes and lyf I made a book with thexcellent prynee and kyng of noble momorye kyng Edward the fourth.

§ 204 I rom Tyndale's New Teslament, the first ten verses of the eighth chapter of Mattheu [1526]

\$ 199 The same, from Puriey's Recension of Wyelif's Translation [About 1338.]

When Icass was come down from the mountagne, much people followed him. And look a leprouse man cam and worschipide hym, and seeds by m. And look a leprouse man cam and worschipide hym, and seeds by the too the man helps of the sit that Moyese commandide, in witnessing to hem. And whanno he hadde to the Y wole, but too man hit go, showe thee to the presents, nad office that it that Moyese commandide, in witnessing to hem. And whanno he hadde nutrid in to Cafarnum, the ceaturien neighbor him, and preede him, mod seeds large man had to contain the to Cafarnum, the ceaturien neighbor him, not preede him, mod seeds large man had to contain the to Cafarnum, the ceaturien neighbor him, and preede him, mod seeds large man had to Cafarnum, the ceaturien neighbor him, and preede him, and to contain the Cafarnum, the ceaturien neighbor him, and preede him, and to contain the contained him and to man had to contain the contained him and to him and to contain the contained him and to contain the contained him and to contain the mountayno, moch people folowed him. And lo, ther cam a lopro and worsheped him saynge. Master, if thou will thou will then him and to cheek him, saynge I will, be elies, and liming him him believe that the him and to cheek him, saynge I will, be elies, and liming him like to the preets, and offire the paths to the preets, and offire the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and offer the grift to the preets, and there can a lope of the put for the his houd to clean the path to the preets, and

2. The West Europeans have a e o, and q and k sounds respectively in place of itho I and c sounds

3 The East Aryans, or Indo-Germans of Asia, have a instead of a e o, and L and g sounds

If ve transform these statements into an historical view, they show that the Indo-Germans were already, in very aneient times, divided into three peoples, one dwelling in Asia, one in Eastern Enrope, the third in Western Europe

In order to be able to draw further historical information from these linguistic

facts, we must determine which of the three groups has preserved the original system

The agreement of the West Europeans and the East Aryans in the possession of aspirates shows that these were originally common to all Iado-Gormans, and thus belonged to the original language, but were lost at some later date by the Slave-Lettic peoples Likewise it may be proved that the East Aryans also originally possessed e and o, and at a later date replaced them by a The proof lies in the fact that, according to the discovery of Collitz, the I sounds become palatal before a, when c corresponds to this a in the European languages e.g., q is ca = Gr ri = L. q is.

The proof that the L and g sounds were the original ones, and that the g and I

sounds of the West Europeans were derived from these by a kind of partial Lautverschiebung, can not be given here. I refer to the fourth edition of my "Vergleichendes Worterbuch der Indogermanischen Sprachea," where the reader will find in general

a more eareful proof of the statements given here

According to these statements, the sounds of the original language were a coand L and c The East Aryans, when separated from the original people but still united among themselves, gave up c and o, as well as l, and replaced these sounds by a and rThe West Europeaus, at a time when they still kept tegether, shifted the I and c sounds to q and I, but retained the original vowels a co Finally, the Slave-Lettic peoples, while united among themselves, give up the aspirates for medice and tenues

While the Indo-Germans still formed one people, and still spoke one language with the a co and I and c somids, they dwelt probably on the confines of Europe and Asia, in the southern branches of the forest-clad Ural Mountains, as neighbors of the primitive Finnish folk which occupied the central or mineral region of the Ural Mountains From these regions the East Aryans wandered as nomids to the east, tho Western division journeyed towards the west, perhaps through the fruitful district which now is called the Black Forth and reaches from Penza to Kharkov The richness of the soil may have occasioned a change from grazing to agriculture. At all events, West Europeans and Slavo-Lettie peoples were still one united folk when their forosithers took up agriculture. This is proved by the agreement in the terms relating to agriculture e g , Goth argan to plow, L arare, Gr apow = Lith arti, OSliv orgg, E sow, Goth saian, L sero, semen seed = Lith sepu, I sov OSlav segg, etc.

The phonetic system of the original speech was, according to the foregoing, essentially like that of the Slavo-Lettic peoples - It was characterized by the three vo vels a e o, the sounds L and c, and the possession of I together with r B it wo ask non, what linguistic formations and what words in the Indo-Germanic languages belonged already to the original language? The question is properly already solved by the preceding statements. It is practically the same as the question of the first separation and division of the latherto united folk. According to the foregoing inquiry, the East Arjans emigrated from the southern Ural region over the Turanian steppes to Iran and India, as a consequence of which the bond between the emigrants and the parent folk was sundered. From this it follows that everything which in the speech of tho Furopeans and East Aryans is originally identical belonged to the original language In considering this, it is a matter of no consequence whether the word has been retained in several members of the European and the East Aryan group, or wbother it occurs only in one member of each group. So, e.g., the verb dhréughō (I decelve) is to be assigned to the original language, although, outside of the Sanskrit and Zend drugh, it occurs only in the Teutonie, OS bi-druggen = G betregen Likewise grento s (holy) is a word of the original language, although it is retained only in the Slavo-Lettle (Lith exerntas = OSlav sight) and the Zend spenda To produce another example from the English, dhuneyo (I din) was already present in the original language, although it can be certainly pointed out only in the Eaglish din = AS dynnan and in the Skr dhunaya (dhianaya) to sound

If one wishes to ascertain what is common to the East Aryans, and thus restore the East Aryan unity of speech, be must in like manner trace out the first separation which occurred among the peoples of this linguistic group. This was the separation into Iranians and Hindoos of Aryan race, and accordingly all originally identical speech material which occurs west as well as east of the Sohman mountains that sepgrate Iran and India, is East Aryan Here, too, it is enough that a word occur in one member of each group, and so, e g, the comparison of the word moder, mohar, first found in Pehlevi (= Pers muhr seal) with the Skr mudra (seal) would be a sufficient reason for assigning mudra to the Fist Aryan original speech, if one were sure that here some later borrowing from the Sanskrit, or thee tersa, had not taken place

When the Turopeans moved west from the foot of the Ural Mountnins, they remained for some time together They made in common the transition to agriculture. as is proved by the expressions common to West and East Europeans which refer to this occupation. To this period belong also the remaining words which are common to both groups of Europeans, but are unknown to the East Aryans. But this union of the Furopeans was not of long duration, and the phonetic system of the original

speech was not essentially aftered means hile

The Slavo-Lettic peoples remained near the old home. But while still united as one fork, they gave up the old aspirates, and in many other ways altered the inher-stance which had some down to them. They separated at first into Slavs and Baltic (Let'1c) peoples, the Slavo-Baltic (Slavo-Lettic) language is therefore obtained by

The West Europeans, or the ancestors of the Teutons, Kelts, Italic peoples, and Greeks, at some per of while they were still one people and possessed one speech, charged the inherited I and g sounds into q and L sounds. The Greeks were the first to separate from this union while the forefathers of the three remaining peoples still fer rome time continued united. Consequently, the West European group of languages would fall into an older and a more recent stratum. To the older stratum languages would fall into an older and a more recent stratum. To the older stratum belong these words which occur in the Greek and also in at least one of the three remaining divisions. To the other stratum belong the ewords which never appears I in Greek, but which can be traced in at least two of the other three divisions

To the Tentonic unity of speech is to be assigned everything which occurs being nmong the Goths and also among the remauding Teutons, and shows itself to be original In other v ords, the Teutonic people, after separating from the West Full ropean unlon, first divided into West Teutons and Goths. Phonetically, the Teutonic is plainly separated from all its relatives by its Lautverschiebung; the Gotts, or East Teutons, are characterized by the preservation of the old &, which the Nex. Tentons changed into a, o g, Goth gibum ro gave = OS gabun = E gare = OHG, läpun

From the West Teutonie came the High German through a new, though partial, Lautierschiebung, while the remaining dialects, among them those of the Saxons ac.

Angles, kept to the older phonetle system

Thus we have come back to the Angle Saxon element of the Fuglish language, from which we started. We have seen above how this primitive form of the English lar guage has been enriched in historical times through the reception of words from foreign tongues into its vocabulary. At the beginning of our article, the Anglo-Saren foundation was considered as sometiming given, not as a thing to be comprehended in its gradual origin. But now we can distinguish in the Teutonic element in Ergicia several strata, according to the time of their origin

The original Anglo-Saxon kernel of the English language belongs to the periods

ommerated in the following statement .-

I. Period of the original speech

At this time all those words were coined which occur in the original English and nlso among the East Aryans, e. g , E. warm = Skr gharmh-s warmth

II Period of the unity of speech of the Europeans of the East and West.

To this time belong those words which occur in the original English and also r the Slave-Lettie, e.g., F. I sow = Lith s(ju), OSlav s(ju). The phonetic system of this period is not different from that of the original speech, and forms only a fram sition to III.

III West European period

This time is characterized by the substitution of q and L for L and c respectively Here belongs all the original English which occurs at the same time among effect Europeans of the West, outside of the Teutons, that is, among Kelts, Italic peoples, and Greeks, e.g., L. Cech, bool = L fagus beech = Gr.  $\phi\eta\gamma\sigma$ ,  $\phi\alpha\gamma\sigma$ , ck, F lav, AS lag = L lex (ground form legh, dat laghei), akin to  $\Gamma$  lv, low With the statement of the law lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum lum llast example compare the Gr To Keinevov, vineh from its literal meaning, that which is laid down or established, comes to signify law

As subdivisions of III., we might place under IIIa whatever occurs at the same time in Greek and English, under IIIb, what occurs only among the other West

Europeans

IV Period of the Toutonie unity of speceli, after the Lautrerschiebnug Hero everything of the original English is coined which occurs at the same time in

What appears only in Lon and High Gothle, e g, L. holster = Goth hulis'r a veil

German is to be given separately

If one arranges the primitive English, or the Anglo-Saxon element of English, in these categories, or separates it according to these divisions, he obtains ineight into the gradual rise of the same, and reconstructs the prehistoric periods through which the language passed on its way from the original language to the language of first Anglo-Saxons, when they crossed over to England under their Old Saxon horse bunner and coat of arms, which tradition has personified as Hengist and Horsa. In the sola tion of this problem the ctymologist becomes an investigator in a prelistoric field, and his activity may be compared with that of the inthropologist when he arranges prehistoric finds according to the different nges, — the steno age, the bronze age, and the iron nee

Quite different is the task of the etymologist in the investigation of the store of words which came into the Triglish language after the emigration of the Anglo-Sarons from the Continent. Here he must eeparate the different strata in the accretions which in the course of time were added to the original English stock. These strain may here be named again, arranged according to the periods before and after the lat-

tle of Hastings.

L Auglo-Saxon period.

Words borrowed from the language of the original Keltic inhabitants of

the British Isles. These appear to be few Words borrowed from the ecclesiastical language, —caused by the ad P

tion of Christianity, c. g, bishop Words borrowed from the Northern tengues,—caused by the reign of the Danes, e g , ransacl

II. English period from 1066 a. D on.

Introduction of the Old French spoken by the Norman conquerors.

Learned words borrowed from Latin and Greek

Words borrowed later from the various languages, with which the English has come into contact

In the following list of words an attempt has been made to lay a foundation for such an historical investigation of the English language as has been indicated here. To this end I have endeavored to present the share of the English in the first refustoric period, that of the Inde-Germanie original speech, or the speech of the primitive folk hefore the separation of the East Aryans from the parent stock. All the roots and words of the arrangements. and words of the original language are enumerated which are found in the original English, that is, in the Anglo-Saxon vocabulary of the English language, and that form of these roots and words is placed at the head which, according to our preent information, they possessed as parts of the original language. The sounds of the original language as here adopted are—

a o o i u, k kh g gh, q z zh, t th d dh, p ph bh; n m y j r l v s.

The palatals are denoted by k Th g gh, tho semicowels by n y r l v s.

The verhal and pronounced roots are separated from each other, n matter that to quires no justification. The prepositions are likewise grouped together as a separate class, as they usually can not with certainty be referred to either of the above class. of roots. A fourth class is formed by the nouns of the original speech, which are dorived from verbal roots, to be sure, but whose origin is often obscure Finally, as 2 fifth class, the numerals are given, the treatment of which lil ewise presents difficult For convenience of reference, the roots and words in the following lists have beca numbered consecutively from 1 to 310 b, the American editors.

#### LIST OF ROOTS OF THE ORIGINAL LANGUAGE IN ENGLISH

EF" The roots in the f llowing list ere numbered and reference are made to them from the etymol gi s of words in the main vocabulary by means of correaponding numbers.

#### I. VERBAL ROOTS.

136 VVL2115 I move = L "veho"

E reay = Goth urgs, G weg, E reight = G wicht, E aught = AB āwuht, E reey, weigh = G. uägen, h ream, uagon = G uagen, L nave = Goth wēgs, G vooge, E reag, wagged = AB wagran, E weggle, reaggle = LG veaggen, from the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the Teutenie wigan, wag, wigum . cf. L icho I convey, Skr iah, iahami, to movo.

237 V VED-, VND, to wet. E water = OHG wasar E water = OHG wazer, G wasser E wet, adj = ONorso tatr, F winter = G. winter, also E otter = Skr udra · cf. Gr δεωρ water, L unda wave, Skr udd, unăttı, to wet

138\_V Vino to desiro, win

E. wir, terming, tean, non = G gewinnen,  $\Gamma$  teinsomo = G wonnesam, AS wynn joy = OHG winne, G wonne, E teou to dwoll, wone, nont = G nohnen to dwell, gewohnt wont of Skr tan, tanati, to desire, win

139. V Vaskuo I wish

From vnskiio we have F wish, n, wish, v =G wunsch, n, wunschen, v cf Skr vánchate he wishes, enncha wish vyskilő is present of ví vô I desire, V138 From vLvo come D wanhope = Goth wans licking, of Goth wens hope, G. wahn delusion, E wane = AS wantan, E want, v = ONorso tanta of Skr finá lacking, Gr evvis bereaved

140 V VEN- to hart

E nound, n = G. wunde, E nound, v = G verteunden, E woundwort = G wundwurz of Gr afaw I infatuate, ovraw I wound (for o-freaw), Skr rangte to aubdue, ranus enemy Cf VAI to suffer, V128

141 V VLIOI wind

E wire = AS wir, L viriae armlets, of Gr fipis runbon, L. with, n, nithe, of L. viles vine, G weide wellow, akin to L vico I weave, Skr vyā, tyhyati, to wind about, envelop

142 V VERO to ward, guard, perceive

E ware, aware = G gewahr, cf Gr opáw (copiw) I sco, E warn, v = G warnen, E warren, warrant, akin to Goth, warran to hinder, L wear, weir, cf G fischiechr of L tereor I fear, Gr fopaw I see, Skr var, e mith, e muth, to guard, ward off

143. √ VÉRTÖ I turn.

L. sward, e g afterward, ef G vorwarts forward, E. word = AS wyrd fate, L worth, v. = L verto, vorto, I turn, Skr. vart, vartate, to turn

144 V MRGO, VRMGMI, I turn, twist

E verialle = AB veriale, E wrench = G rank crookedness, rank intrigues; E. wrench, v = G. renden, verrenden, also, with p = 1, E wrap, wrapped, warp, v = AB. wearpan to throw, G werfen = OSlav, or lag I throw, properly "torqueo" cf. La vergo I turn, Gr spiusa I turn round, spousos n spinulng top, Shr. tary, ernákti, to turn.

V VERZ , pres. VPZ1 0, I effect.

I. work, n. = G verk = Gr repyo, F worl, v, wrought = AS wyrean, Goth scalriyan, wairhia = Zend verezyčím. I effect, E wright, as in shipwright, wheelwright = Goth. recurits.

126 V VELA, VILLY, to turn, twist

E. wale = AS, wale, Goth wales staff, F well, v = G nälzen to welter, F we'ler, v = LG willern E. woold, v, et G bear then to woold, G welle ware = Lith, wilnes; E. wool = G wolle, Lith, wilnes, Shr krya wool CI L volco I roll, Gr sedum I enfold, Ekr. var, eguite, to wind, surround V BEL- to undulate, Ivil.

E. sca'loue, wallep, wales, cf. OHG scalm heat, Skr arms ware, I weel (= well, |

n) = Goth. walwjan to roll, wülan to boll. 147 was perhaps originally identical

nith V146 148 V Váső I dwell, turry

E was, wast (wert), were = Goth wisan, was, wisum, G war, ware, gewesen, uesen a being, essence, of Shr was, edisati, to tarry, to pass the night. To this last signification we are perhaps to refer E west, western = G west west, as the place where the sun goes for the night.

149 VES, VE (AUS), to light up, become day

E east, eastern = G ost cast, astern Easter, Lith ausz day hreaks, L aurora dawn, Gr avws, nws, Bkr. ushas dawn, alln to vas, ucchatt, to become day, light The European Aus-corresponds to the Aryan us-, both coming from Vs-, a weakened form of VI's

150 🗸 Veskő I wipe.

E. wash, v. = G waschen, not to be separated from G reisch rag, wischen to wipeof Skr pra unch to wipe away (unch is from VNSKIIO)

151 a V sí iko I pour ont

E siere = OHG sigi, genitivo sibes, G. rieb of Gr ihai to sift, rpupouros straining cloth, akin to OHG. sihan to strain, sift, G ceiken, E. sift = AB siftan, LC stiften, G. sichten; T. sile = LG sil, n., stelen, v., E sig urine, cf. G seigen to filter, strain, hero belongs also E sea = Goth sains (from saihvas), akin to Skr. sic, sificati, to wet, pour out, vela a wetting, effusion

151 b √ skikō I dry

E sew to drain = AS seon to strain, filter, OHG sthan, G seihen, and versiegets to dry up · cf Zend haceaya to dry up, hisku dry . 1151b is probably a development from V151a

152 √ srusō I dry

E sear, scie, a., sear, v = AS schilan, OHG suren, nkin to Lith, sausas dry, OSlav. suchă el Gr avos dry, Skr çush, çushyatı, to dry, çushla dry, çush standing for sush, as is proved by Zend hush to dry.

153 🗸 sí zuő I grisp, subdue

E sail = G segel, n, segeln, v, Γ seward = OHG sigwart, from sig sictory = Goth sigls = Shr shhas power, akin to Gr έλω I have, έσχον I had, Shr. sah, shhati, to conquer, subdue 154 V sf DO I sit

E vit, sat, sitten = OHG sizjan, cf. Goth sitan; E seat = AB seot, set, G sitz, E sunset, set-off (= offset), set, v, setting = Goth suhan to set, G so tren, E settle G satz, E settle, n = Goth suls, G sessel, cf. L settle (from settle) E settle, and T settle G satz, E settle, n = Goth suls, G sessel, cf. L settle (from settle) E settle G satz, E settle, n = Goth suls, G sessel, cf. L settle (from settle) E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G satz, E settle G sedla). E settle, v cf L sedeo I sit, Gr. εζομαι, εζω, Ekr sad, sadatl, to seat one's self

155 √ S£LPÖ I glide

E salic = AS scalf contment, OHG salba, Goth salbon to anoint, G salbe, n, salben, v, akin to Gr δλεη an oil final, έλτος oil, fat, Skr sarpis melted butter, spprå smooth (= Gr λιπαρος) sl.Lpō was probably originally sl.upō, of Skr. sarpām: I creep = Gr έρτω, L serpo

156 V SILVÕ I kom E san, sewed = AS sebieian, OHG siman, Goth, singan, E seam, seamster = AS scam seam, G saum, n , saumen, v of L suo I sow, Shr sit, sivyali, to sew 157. √ ShEI- to slilne

theer = AS seir bright, Goth, steirs clear, OHG seir, G schier alieer; E. vhine = AS seinan, Goth skeinan, G scheinen, F shimmer = G schimmer, V schimmer, n, akin to AS selma brightness of Zond Ihshaëta light, clear, Ekr Ahyā to appear or see

158 V SKEU- to cover

E sty = OS stw cloud, sky, E seam, u, seum, v, seumming, seumble, slim, stimmed = G schaum form, schaumen to foam, akin to Skr stu, skundit, to

159 🗸 ani võ to hasten, shoot

E shoot = G schiessen, E sheet = AS recle, regie, E shot = G schiest, E secut = ONorse slote projection, MIIG schiez gubbo side of n building, cf. L could tail, Goth shouts border of a garment, E shut, shulling = AS scyllan, cf. G schiutzen to protect, E shuttle (= shuttle) = AS scechtel, Dan skyttel, cf. G schill shuttle, E skuller = slaytes, E shut, skuttleh, E seud = Dan skyttel to fly the shed, shedding = OS sluddian to slinke, G schillten to pour, shed. The simple root (Shull is in the Goth & Living no co. Shr. cure eving to bester. Granis = sixual (5) kU is in the Goth el ēicfan to go, Skr cyn, cyhi atē, to hasten, Gr σενω (= κρενω) Ì more

160 V які приб I shovo

I shove, shoved, cf AB scedfan, Goth shuban, G. schieben, E shovel = G. schaufel, akin to 8kr lshubh to begin to move

161 √ SKHEG, SKHAG, to move, shake

L thale, thool = AS seeaean, ONorse slaka, E shoel, n, shoek, v. = OHG seeo, n, MHG schorlen, v, E. thank = AS scanea, cf OHG senko shin, G schinken ham, schenkel thigh; E skink, v = OHG seenean, G schenken, from shank slimbone, which served os faucet for the cash cf. Sir khája turmoli, thank him oNorse skink in the blue of the library thanks of the standard shanks Than; to limp, like ONorse of all'r limping 162 V SKHO to shade

E. shade, shadone == Goth sladus, G schatte. cf Gr σκοτος darkness, σκοιδί dark, σκιά shadon, Skr chāyā shade

163 V STA to stand

L. stay, v = OHG sten; E staw, stove = AS stovan, E staddle = AS staddl. E stead = Goth. stops, G, statt, statte, E steady = G stetiq, L stud = AS staddle state, G gestit, from this comes E steed = G state mare, E stool = G. stuhl, L stoom, E stand, v, stood = Goth standan, OHG stantan, stuont, L stall, n, stale, v, to make water, stell, n. = G stall stall, stallen to make water stelle place of L stare to stand, Gr στημι I stand, Sir sthä to stand.

164 V STEIGHÖ I mount

E stigh, sty = AS stige, ONorse stia, OHG stiga, aminstiga, P state = LG steger atep, E stee, stey = LG stige, E, stile = AS stigit, LG steger, F sterny = AS stigrup, G stegrelf, P steward = AS stigeweard, ir Teutonic stiga = Grorize I walk, of Skr stigh, stighnotil, to mount

65 V ST NO I groun, roar

E stant x = ONorse stigate a skin to AS maternal in stigates to make a din

E stant, v = ONorse rijanta, akin to AS gestun din, stuntan to make a din Gr orew I moun, orders a signing, Skr stan to roar 1866 V STLRA, STERU = L "sternere"

L. stare = Goth and startan, OHG staren, G stare fixed, starren to stare, T. stern

adj = AS sterne, eturne, Olfs storne, to be astonished, of L. conservance to territy, E. stern, n = AS steam, of Gr orespa the cutwater of a ship; F stir

stirred = AB strugg OHG storres G of ren; E storm = G sturm E store a tall } EAR elect C stery of Or erophy point, E. Mart, v start a start-up (Exputer) sterns striken, to strew spread out, Ekr ster afre til (from af in = stree) to attem To y strike point: E strew = Goth, strouges, G strews F strew = OGG stre

O strek Or orderent strew organic is all strew fite a or step it to strew 107 -V STL STEE to be present hard. P. stone = G stelle ; cf. Gr mele stone akin to Skr sted to be pressed pra-st me

breased fourther O'Verse stre strumple. 108. V STU- STED to stand fired.

P. H w = G at wen E. eleer v = G alener rudler atomera to atoer of O'cor stours = Gr everage stake : F s or the animal = Goth, shur G sher bull F eren, v m AS straum to make a din, G stousen to be autombbed of Gr ered porch prauper stake wrom I stillen grader filler Ekr står ro etrong allem office where built

221. V GEMIS Woman E queen, quean = Goth. gen s wlfo, Skr jani, as in dri jani having two wives, Zend jens woman Not connected with JEN to produce

222 √ GOLBHO-S calf

L calf = G lath of Gr deldus womb, deldas a joung pig, Skr garbha womb, embryo, apa-gaibha misearrying

223 V GOV com

E cow, pl ku, kine = AS cū, pl gen cuna, G luh, OSlav ln gov-edo horned cattle, Lett glws, OIr  $b\bar{v}$ , L  $b\bar{v}$ s, Gr  $\beta o\bar{v}$ s, acc  $\beta o\bar{v}$ v, Skr gau, acc  $g\bar{u}m$  (=  $\beta o\bar{v}$ v)

224 V GHORMÓS Warm E warm = G warm, Goth warmjan to warm, L formus warm, Skr gharma warmth, heat From GHER- to glow (\sqrt{32}) The Teutonle warm stands for grarm from European ghvormo-s

225 V CAPHOS hoof

E hoof = G huf, Skr capha, Zend cafa hoof, claw Its origin is quite uncertain

226 V CASO hare
E hare = AS hara, OHG haso, G hase, OPruss sasin, Skr gaga for gasa 227 V CERD, CRD, heart

E heart = AS heorte, Goth hairto, MHG herze, G herze, herz ef Lath szirdis, OSlav sridi ce, Gr spadia, L cor, coidis GRD agrees with Skr hid, hidaya, heart The ground form is perhaps CHERD

228 V COINI-S sharpness

E hone = ONorse hein whetstone, of Zend çaini top, peak Akin to Skr çā, çıçātı, to sharpen of Gr xwios cone, L catus shrill, sagacious = Skr çıtu sharn

229 √ guön, gen gunós, dog E. hound = Goth hunds dog, G hund, Lath szü, gen szuns, Gr κυων, κυνός, Skr stā, gen sunas

230 V CRVO- horned L hart = AS heorot, OHG hiruz, G hirsch, from L cerrus = Gr kepafós horned, Zend grea of horn.

231 V ZIVU, ZVU, kuce

231 V ZLVU, NU, knee

E Ince = Goth kniu, G Inic, L. genu, Gr γόιν, -ρό χνυ on one's knees, Skr

jānu, jāu, knee, Zend ganva nom pl

232 V INUS chiu, jau

E chiu = Goth kinnus cheek, G Linn chiu, L gena cheek, genu iaus of the

cheek, Gr γεινε under jaw, cheek

7 Nu agrees with Skr hánu jaw

233 V IIIANS goose

1 goose, pl geese = G gans, pl günse, Lith żasis, gen pl żgsu, L anser (for hanser), Gr χην, Dorie χαι, pl. χαι ες = χανσες, Skr hάπισα goose, swan 234. V /110LTGS Zili TGS, gold.

I. gold, golden, gild, gilt = G gold, golden, vergulden to gild, Goth gulp gold, OSiav rlato, Skr hāfala, cf. hiranya gold, harita hollow 71101 TOS is from the verbal root which occurs in Lith. Lells to be green or hellow (V49)

235. V ZIIJES yesterday E. perferday = Goth guiradagis to-morrow, G gestern yesterday, ONorso gre-L. leri, tester is of prestorday, Gr. exter yesterday, xosfor of yesterday, Skr hyas yesterday, Zend syl

236 V TILO deal, board

E thill = G die'e board, OSlav tlo, filo, ground, floor, Skr tala Perhaps from TELA to carry (V55)

237 V TANÚS thin

E then, thenner = OHG dunni thin, G dunn Teutonic punnga s arose from punnús = TNNÚS Of L. tenur, Gr. -avagos stretched, Skr tanú (for innú) tida 238 V TASDO, TORSDO, thrush

If throwle = MHG drostel, L turdela et Lith stranda-s, OPruss treste, ONorse prostr, L turdus, Gr στρούθος sparrow, Skr tarda za certain bud 239 V DENTS, dat DNTLI, tooth

Il tooth, pl teeth = Goth tunpus of OHG zand, G. zahn, L. dens, Gr obovs, Skr dant, datl a

240 V DEDLU, DERDRU, DEDRUKO-, eruption.

E tatter, tetter (also dartars, dander, dandruff'), akin to OHG zi'aroch eruption on the skin, Skr dadru, dardru, dadruka, ornption on the skin, itch Cf also Lith dedert inc herpes, cruption From the intensive of DER, Gr. depu I flay (1/63)

241 V DERU, DRI U, DRU, wood, tree

E tree, trough = Goth true tree, piece of wood, MHG tree, gen troges, trough. cf Gr δόρν beam, spear, δρύς tree, onk, Skr daru, dru, wood, tree It probably bolongs to DER- to cleave (V63)

242 V porbnos, premos, turf

If turf = LG torf pert, OHG surba turf (G torf is from LG), Skr darbha bunch of grass. From the yorbal root found in Shr darbh to wind, wrap 243 V DAZIIVA tongue

L' tonque = Goth fuggo, OHG zunla, OL dingua, L. lingua (el OPrusansunis, Lith leturis, Oplar gezy-la, OPor. zaia, Zend hizta, hizu, Ekr Jihin, The ground form of the word is preserved in Tentonie and Old Latin. 244 V Dilus (PATER), gen DIVOS, mamo of the highest god

E Tucsday = AS Tucesday, MHO ciestae from Tuc = OHG Ziu. cf L Jupi ter, Gr Zevs ramp, gen Διεός, Skr Dyaushpitä, gen Dieas, Zeus, ek) To be derived from the root DIV (more correctly from DI) to shine

245 V DHUGHXTLR daughter L. daughter = G tochter, Lith. dukte, OSIw dushti, Gr θυγάτηρ, Skr duhitar From Dilugii to be of uso (V68), us o g E maid, Goth magabs, from magan to be strong

246 V DHUR, DHURA, door

E door = AS duru, OHG, two, G thur, ther of Lath drava-s yard, Gr bips door, L. fores Skr. drara 3 ard, evar, dur. door agrees with dhvoro-s, dhur 247 V PATÉR, loc PATÉI I, dat PATRI I, father

L father = Goth fadar, G tater, OIr athir, L pater, Gr πατηρ, Shr pitä, loc pitari, dat pitrė It ls derived from Pλ to protect (√75)

248 V PETRO-feather E feather = G feder, Gr rrepor, Skr paira From the root found in Gr rivo man I fly = Skr pat to fly

249 V PEÇU cattle L fee = Goth failu cattle, G weh, L peeu, Skr phru, poru In the mean ing "possossion" E fee agrees with AS feeh, Goth. failu, cf L peeuna prop

erty, money 250 V POD, dat PODí I, foot
E fool, pl feet = Goth fotus, MHG tuoz, G fuss, pl fusse, L. pes, Gr roof,
Skr pad It belongs to PLD to go (V77)

261 🗸 BHĀZHU-S shoulder joint. E bough = OHG puac shoulder joint, shoulder, MHG buoc, G. bug, Gr τηχνς

forearm, arm, Doric raxvs, Skr būhu, Zend būzu 252 V BIIANSO- cow stall

L boore (ef goore = G gans) = ONorso bus, MHG banse ef Goth bansts barn, Skr bhūsa con stall 253 √ BHEBHRU-S boaver

L. beater = G biber, OSlav bebril, L fiber, Skr babbru a sort of felmeumon, also as an adj , brown, Zend bawri beaver of E brown = G braun 254 V BHERZĀ, BHRZĀ, birch
Γ birk, birch = G birle, Lith berža-s, OSlav bičza, Skr bhūrja a kind of birch

Here belongs E barl = G borke

255 V BHODROS good

E batful, battel, batten, cf Goth batnan to be profited, E better, best (bett) =

G besser, best, E bote, boot = OHG puoza profit, penance, compensation, G busse penance, compensation, of Skr bhadra auspicious Perhaps it is akin to the Skr bhand to praise

256 V BHUZO- buck. E buck = Zend būza, ef Skr bukka (from bhug-ka?)

257 √ BHUDHNO- ground, bottom

E bottom = AS botm, OSax bodem, G boden cf Gr πυθμην, Skr budhna. Cf I body = MHG bottich, pottich From bottom has sprung bum the buttocks, cf MHG budeming tripe.

258 V BHRATOR brother
Γ brother = Goth brobar, OHG pruoder, G bruder, L fiater, Gr cphrwp. Done opatwo = Skr bhritar

259 V NAGIIO nail L nail, n, nail, r = AS nægel nall, Goth naghan to nail, G nagel, n, nageln, of Gr övek nail, L unguis, Skr nal ha (from nagh ka)

260 √ MABHĀ nwo (of a wheel), navel E nave, navel = OHG napa nave, napalo navel, G nabe nave, nabel navel, Old Prussian nabis nave, navel, Lett naba navel, Gr oudalos, L. umbilicus, Skr  $n\bar{u}bhi$  nave, navel. 261 √ NASĀ nose

L nose, nase, ness, nozzle = AS nosu, nasu, nose, OHG nasa, G. nase, L nasus, nose, nose, Skr nas, nosa, E nostri = AS nose pyrel

202 V NLPÖT grandson, descendant

E nephew, a union of AS nefa (= OHG nefo, G neffe), and F. nereu, from

L nepos grandson, nephew, descendant = Skr napūl grandson, descendant 263 V NI VOS, NEVIOS new

E. new = Goth. muyes, G neu, OSlav novů, Lith naugas, L novus, Gr 14505. Skr nava, navna Here probably also E now = Skr nu, nū, now This is probably ably of pronominal origin, from NE- this

264 V BISDÓ S nest E nest = AB nest, G nest, L nīdus (from nisdus), Skr nīdá nest (from nisdu) 266 V North anglit

E night = G nacht night, Lith naktis night, OSlav noshti, L noz, nochum, Gr.

## EXPLANATORY NOTES

ON

## THE REVISED ETYMOLOGIES.

Ir was intended that the etymologies of the former edition should be simply revised—that is, should be retained in the present edition in matter and form except so far as errors had been detected, or new discoveries made, or better methods of presentation devised. The application of this rule has led to several important changes, a brief notice of which may be useful

I A method has been adopted by which the instory of the words treated may be indicated. The older English forms, if known and differing from those now in use, come first, then the earlier forms, - Anglo-Saxon if the word is native, French, Latin, Scandinavian, etc., if the word is from a foreign source. Not infrequently a word is in this way traced back to two or more languages, thus, the French words in English usually come from Latin, but not always directly Such words as apricot, escori, guice, spy, will illustrate the arrangement of forms. When the direct history has been followed as far back as possible, then cognate words in other languages of the Indo-European family are added, but these kindred words are always clearly distinguished from the actual sources of the English words. For comparatively rare or obsoleto words, the history is not, as a rule, carried beyond the immediate source of the English forms, but common words receive fulier treatment. No attempt is made to give roots, but an idea of the present views of scholars as to the probable primitive forms can be obtained from Professor Fick's "List of Roots of the Original Language in English," pp xxiii-xxxi, to which reference is made by number under the sign V. The historical order here indicated is departed from in certain cases where no meonvenience or misunderstanding seemed likely to result, namely, when a foreign word, usually a French one, is given in an old form, while that now in use, if the word still exists, is different. In these cases the modern form is added immediately after the old one, readers thus being enabled to recognize the English word as really identical with the modern French one, though not, properly speaking, coming from it. Examples of this may be found under the words oble, catch, governor, and many others It was often doobtful whether a word came into our language directly from Latin, or passed through French first on its way ioto English In such cases, if the Latin is given as the source, the possibility that the Trench was really the immediate cource is indicated by putting at the end of the etymology the French form with the abbreviation "of" preceded by a colon. Sometimes a different wording has been employed to express such a doubt clearly

II By recognizing and indicating this historical order of vord forms, it has been possible to omit a considerable number of forms which throw no light on the history of the Eaglish words. If a given word comes from the French, and the French word is a direct descendant from the Latin, then the Italian, Spanish, Portuguese, and Provencial cognates are evidently unimportant. If, however, the French word is from Italian, for example, the insertion of the Italian word is necessary for the complete history of the English one.

III A special feature of the revision is the eareful and extended use of cross references. Derivative words refer—except in case of rather uncommon (or technical) words whose full history is less important—to a simpler form when one exists, naire de l'ancienne l'where the final etymology is given, and under this simpler form reference is again made to the most interesting or typical derivatives from the same root. The words known as dooblets, in which the same original word appears in the language in two or more differing forms, as guard and ward, each having its own history, regularly light on incidentally

refer to each other. By this means not only is the history of a word given, but attention is directed to kindred words, whose relations, often not obvious at first sight, are made clearer by the history briefly indicated in the etymology of each. The composite character of the English vocabulary, and the great fertility of roots, are thus illustrated. Common words, such as two, five, fen, father, core, water, full, lond, red, thin, be, core, stand, etc., will serve as illustrations. This system of references, the same in principle as that used by Skeat in the Etymological Dictionary, has here been carried out, it is believed, more thoroughly and consistently than in any other English dictionary.

IV In general, the final etymology has been put under the commonest form of the simple word, — that which is in most familiar use in the language. This is usually a native English word, or a word early adopted into English. Compare father with paternal, foot with pedal, unspect with 1999, three with trio, etc.

V The fact that not all the etymological problems of English have been colred, and that much work is devoted to the subject, with a consequent steady advance in our knowledge, makes obvious the need of caution. Especially is this true when, as here, the attempt is made to popularize come of the results of scientific philological study. The frequent use of such words as "perhaps," "possibly," "probably," the abbreviation "ef.," which makes no positive exerction, will show that in the revision the danger of too positive statement has been kept in view.

VII Besides the Rev W W Skeat's Ltymological Dictionory of the English Language, many other books and philological journals were used, particularly Kluge's Ctymologisches Wörterbuch der deutschen Sprache, the fourth edition of which became available towards the close of the work. These works, with Mitzner's excellent but incomplete Old English dictionary in the second volume of his Allenglische Sprachproben, Stratmann's Dictionary of the Old English Language, and Sievers's Angelsuchrische Grammatil, among others, furnished a solid basis for the Germanie side of English For that part of our vocabulary which comes from French or other Romance languages, the reliance was mainly on Diez's Etymologiches Worterbuch der romanischen Sprachen, with Scheler's supplement, and the additions and corrections due to other scholars, and found in the periodicals Romania, and Zeilschrift für romanische Philologie, and elsewhere, together with the various lexicons, especially Littre's Dictionraire de la langue française, and Godefroy's Dictionnaire de l'ancienne langue française, so far as it was available. The invaluable New English Dictionary, edited by Dr Murray, could be used only for a second revision of a number of separate articles, almost all in the letters A and B, and for soch words beyond the first letters of the alphabet as the first parts of that work throw

## STANDARD OF PRONUNCIATION.

§2 The ultimate standard of pronunciation for the English longuage is the usage that prevails among the best educated portion of the people to whom the lauguage is remacular, or, at least, the usage that will be the most generally approved by them The pronunciation of this class of persons, all over the world, is for the greater part of the words of the language substantially uniform, and distinguished by only comparatively unimportant shades of difference

There are, however, sundry diversities of importance which affect the pronunciation of a good many words. And there is no country or locality the custom of which con claim precedence as the everywhere acknowledged standard by which such differencee are to be edjudged The most approved pronunciation in London and the southeast of England is in some points different from what prevoils anywhere else But, notwithstanding the advantage connected with the metropolitan position, the usage of London and the viciuity is not roally the standard for the other parte of Great Britain itself, in the sense of securing netual conformity, or even of being acknowledged as the model which should be followed. There are as yet but few of the best educated of the American people who are disposed to take the usage of Londou as the etandard for their own pronunciation. Thus there is in fact no single absolute and universal standard to serve for every ease

Uniformity is to be preferred to diversity There is no reason why it should be deemed desirable in itself to eet up an American as opposed to a London or an English standard. But any fashlon anywhere intrinsically bad chould be avoided the nosal tone in speaking, which is yet too commonly beard in America, is a thing to be corrected, and would be such even if it had become the fashion in London, ee any habit of pronunciation whatevor that comes in as a change for the worse should be strenuously resisted, oven if it should have gained foothold or have become the

ruling mode in the higher eireles in London

The aim of a pronouncing dictionary should of course be to serve as an exponent of the usage which is the ultimate strudard of pronunciation. In the cose of diverse usages ableh have extensive prevolence, either within different local houndaries or side by side in the come community, a dictionary that is to sorve for universal use should take note of each of them, without, however, being required to notice local peculiarities not approved by the best educated people. This is all that the dictionary has to do, except that it may and should present the reasons, when such exist, which render one mode of pronunciation preferable in itself to another. Its proper office is to hidicate and record, not to dictote and prescribe. So far as the dictionery may be known and acknowledged as a faithful interpreter of the actual usage, so far and no further, and in no other senso, can it be appealed to as an authority It is only in its representative copacity that a dictionary may ever be taken as itself a stendard of pronunciation This would still be true of any work of the kind that might exercise euch influence and gain such escendency as to become a universally accepted and virtually authoritative standard

§ 3 The task assumed by a pronouncing dictionary is not easy of achievement Supposing no doubt to remoin as to what is the actual usage to be indicated, oven then nothing more than an approximation to excetness con possibly be attained The sounds which we indicate by the same symbol, and whileh, it may be, we regard as identical or absolutely alike, have in fact only a certain general resemblance in common, and are subject to allowable variation within certoin limits. This is true universally, while occasionally the limits are so wide, and the actual variations so considerable, that the symbols need to be especially noted as having only an indeterminate value as exponents of common usage,—as in the case of 3 (3rb), and of 4 (4rn), and 5 (forn), in this Dictionary (see §§ 87, 113, 139) What we mark in any case is only a general type of sound Each element undergoes variation as conjoined with this or that other element in a syliable or in a word or phrase the ti (fise, ttine, etc., § 131) is a signal instance. Pronunciation modeled after a common standard will vary somewhat in different localities, and somewhat as given by different fudividuals in the same community, and even as given by the same person at different times Differences in stress, quantity, and pitch have effect upon orthospical quality In the case of unaccented syllobies, there is in the vowels an obscurity and uncertoints, a want of uniformity in usage, and an allowable and proper variation according as the utterance is quite rapid or more or less deliberate, which make it pecularly manner

difficult to define and describe them processly. The proper medium has to be sough between the fudiscriminating fashion which would reduce these vowers to the smalle dimension, giving them all the same neutral sound at all times, and on the other hand a pedantic and affected precision which will deprive the syllables of their prope character as unaccented (see §§ 36-41)

There are, moreover, sundry uses of words in which some departure from ti ordinary standard of pronunciation is allowable, or even absolutely inevitable lent emotion will subdue and boud the words to a fitness for the expression strives after It was aptly said by a master of dramatic art, Mr Heary Irvia "You can not stercotypo the expression of emotion, . the speaker who is sound ing the gemut of human feeling will not be restricted in his pronunciation by th dictionary rule" In singing, the exigencies of the art require certain deviation from the normal pronunciation of spoken words, though none are to be made with out good reason Poets now and then take liberties with the accent of words, or somotimes, in setting verso to music, violence is done in the same act to the prope accent of the verse and of the word, euch deviations are, of course, exceptionel

The means of indication at command for a pronouncing dictionary are unavoidable imperfect. The fact will hordly be credited by those who have not tested the matter by special observation that it is impossible, in the case of come of our rowel sound to select for an example any word not subject to such diversity of pronunciation : to render it unfit to serve the purpose in other than a most imperfect manner this is and must be the ehlef means of indication to be employed.

This inodequoes is a cogent reoson, in addition to others, for resorting to ti positions and motions of the organs as a means of identifying the sounds. But the method also is beset with difficulties. The organs as employed in speaking are, for the most part, out of eight, and have to be observed through the toetuel or the mu cular senses, and those perceptive faculties require to be developed for this partic lar sorvice by special training, and may comotimes need to be aided by artifici devices. In this as in every method there is required, of course, a discriminating car for the arileulate sounds of speech, winch, like an ear for music, may be said wanting while the power of hearing is without defect. When a correct description of the organic process has been furnished, there will still be some difficulty in apply ing the instruction, so long at least as the requisite training is neglected in or schemes of education. It is to be added that, in pursuing this method, some allow anco ie to be made for differences in the shope and structure of the organs in differences ent persons, and for the somewhat different ways in which sounds nearly or esser

tially the same may possibly be produced
Since no single method is perfectly adequate, the best attemable result is to be gained by omploying the different methods that are any way available, and makin one supplement the defects of another

§ 4 In preparing the rovised editions of this Dictionary issued in 1847 and in 186 thorough endeavor was made to ascertom the actual usage which might properly b taken as the standard of correct pronunciation, whether in America or England Th words in the vocabulary were marked in accordance with what was believed to b the pronunciation most generally approved by well-adnested people in America, aut in cases of difference between American and Figlish usage, or of divided usage i America or in England, and especially in cases of disagreement among authorities thore was added a reference to the statement of such difference or disagreement i the "Prunciples of Pronunciation," or else to the "Synopsis of Words Differenti followed in these particulars, and the pronunciation as given in 1864 is retained except when decisive reasons for a change have become apparent. In some cases of divided and unsettled asage, the word in the vocabulary is supplied with alternativ forms The plan of respoiling for prominciation is adopted in this revision, as preerrible on the whole to the former plan of direritical marks without respelling and the unaccented syllabics are marked, as well as the accented, instead of boin left to the guldaneo of general rules, — something of this kind being demonded i order to supply a want that has been feit, and that inas proviously been left ur supplied, mainly because of the difficulty of accomplishing the end in a satisfactor,

### SYSTEM OF ENGLISH VOWEL SOUNDS.

Note — The System of the Yowels which is here presented has for its hasis the | such as come from a flute or an organ pipe so hadiy blown that the instrument refuse manner of their formation by the organs, and agrees, in its general features and the main part of the nomenclature, with that advanced by Alexander Molvillo Bell and the same as modified by Henry Sweet, though differing from both in some points of considerable importance. A synopsis of the echome is presented in the Diogram at the foot of the next following page

§ 5 YOWEL SOUND, whether uttered with tone as in speaking alond or merely whispered, has its source in the glottis, that is, the vocal cords, or vocal ligaments with the narrow opening between them, in the upper part of the larynx (see Fig 1) The vocal ligaments, with their membranous covering, serve to produce tone in speaking and singing, in just the way the lips do in blowing a horn or trumpet, with this important difference, that they have a capacity of adjustment for tone modulation such as the lips have not Whispered vowel sound ie mide by friction of the breath against the vocal corde or the arytenoid cartiloges, which ere not then drawn close together as they are for tone vibration, and there is also, in most if not in all

close together as they are for tone vibration, and there is also, in most if not in an earth, some sound produced by friction in the passage through the mouth. The round thus originated is variously modified by resonence in the eral cavity, which is modified to different forms by different ndjustments of the flexible and morable parts of the mouth, namely, the tongue, soft palate, jaw, inps. checks, and the walls of the pharyiax, and hence arise the qualities by which vowels are distinguished ero from another. The massl vowels, as in French, and a resonance in the massl passage, but a massl tone is always a hierarch, in French, recomposite in the masal passage, but a masal tono is always a blemish in English speech, except in the proper masal consonants, in, in, in (§ 107)

proper masal consonants, n., nr, nr (§ 101)

In speaking aloud or in ainging, the voice may be pitched higher or lower at pleasure carrying with it all the while for any individual vowel the characteristic quality imparted by resonance from the suitably adjusted oral cavity. The process is explained by Helmhoitz as the reinforcement of a part of the compound tone that is, sues from the larynx. In a whisper, we have tones elected from the month cavity

to speak but etill gives out wind; toucs of recognizable degrees of pitch, and each whispered vowel has its own characteristle tone, which is of a definite pitch invaria ble for that vowel Thus, whether the vowel he voiced or whispered, it is the ton proper to the cavity as adjusted for the vowel, that serves, in the one way or the other, to produce the characteristic quality

§6 Every part of the oral cavity — or, more precisely, the whole passage from the larynx at one end to the outer edge of the lips at the other — will more or less modify the sound, but for any one vowel, only a certain portion is instrumental in giving the characteristic quality by which it is induidually recognized. This part, as thus omployed and adjusted, may be called the VOWTL-CHAMBER for that tokel, through the action as a resonance chember, the vowel quality comes into being In the for mation of a vowel-chomber, there is in every justance a PLACE OF CONSTRICTION made by a more or less close approximation of some part of the tongue to the hard palate, or the soft palate, or the pharyngeal wall, on each eide there is actual con tact, leaving a passage through in the middlo, for some vowels the ifps are controcted making n superadded place of constriction. The vowel chember consists of the passage at the place of constriction within the mouth, and together with this, in most cases, the carity, or compartment, before or behind this place,—unless both the one before and the one behind be included. To make the vow ci-chamber complete for : clear vowel sound, the lateral margins of the tougue are firmly applied all along to the sides of the plurynx and soft printe, or also still further on to the borders of the hard palate, and for the labial vowele the walls of the chamber are formed in part by tha cheeks and lips. A tenso condition of the soft parts of the walls is requisite for the resonance that is essential to the production of a vowel sound

The position of the lower jaw is important, though in a subordinate and accordary tense, and through its connection with the organs directly concerned Thus, when

. See Fowel Theories, by Alexander Graham Bell, in "American Journal of Otology," July, 1879

allows of longue configurations and positions of erailed difficult a impossible. The position of the lower law may sometimes affect fed racily that of the largest and

even th t of the soft palate. In all this field of inquiry it is important & dist.mguish the incidental from the countial.

47 The character of the recensive proper to any on ity and thus to any particul reweshainber will depen to the size and shape of the certity and together with this the natura and condition of the material of which the servest parts of the including walls are composed. The term MEROVENCE as descriptive of the moves by set A rosed quality to imported meads to be taken, however as implying more than the simple resumance w should here if the sound were of outside origins as the current of worst breath strikes upon or rube against the wells of the crat passage in one or another way or place, the effects thus produ ad will mingle with and otherwise mod'fy those due simply to the size s.ape, and structure of the early force of

them will be really fricative a a in vocal speech and thas similar in kind to such as haracterise certain of the consonants. The specially effective age y may also be determined to a particular portion of a owel-chamber by the energetic action an tense condition of such part and by a direction of the worst current so as to implaye upon the same. The tone proper se the vowel-chamber se a remnant cavity simply while it is a prime factor is not the only factor in determining the quality of a ve We find thi view of the matt r confirmed if we try to other rowel sound while drawing in the breath. We can by this process ellett vocal tone; but we can in this way muk only a faint enyronimation to the worst qualities o ked in the ordinary mann : the again the flowing tones at the singing voice bring out these qualities

less distinct y than do the tones of speech which are, as we may my throws into the crai ce ity instead of figwing to.

Som vowels are taken more easily at a low and others at a high pitch. B I this is do mail by if not wholly to the connection, by conscio and Lyment, between the larger and the root of the temporal is consequence of which terrial recutions at the longs a favor the adjustment of the largus for a big t and Abers for a low r patch. A change in the pitch of a gi en cowed may the involve access being in the sit pe I the row 1-chamber but not so great as to furld a gufficiently accorate definition of the m eral owet positious.

\$ 2. For the vowel & (Arm 6h), -with its "wide" variant & (fate 11den, \$\$ 13, \$1),—the country than is made by preventuating the frome bark part of the tone to the back wall of the pharpux the place is thes very mear to the payous and read of the brogge (see Fig. 1). Above this place, the wowel-chamber curve forwarand open grainally between the tengue on the coe bond and the pharyngest wall and not pulate on the other. It reaches no further forward then the front limit of soft pulsts the vew I get its nomental qual? In the space than bounded ough schlors to some modification by means I parts of the mouth I other forward: runt out of the tipe, though it may bepair will not officerate the haracteristic quality of the vewel-

This may properly be describeted the CPR 1 THEGAT FOWEL, since it to ker in the threat and the part adjacent, and with the threat in the apper or forward part quite open, settling obstructed nor constraint, or that it would be inflorted and thrown forward directly and without Madranov from the planyaged wall. By the first is keep must the Joseph with passage that runs from the ment hot the escopi-ery and the larger — has proper menting at the word as spitled! # phillions harrow it true trail But her wild name takes when in repose For the nerrow, the tengue is pressed with some ferce toward the palato or pheryngeal wall, making coatact and meeting resistance on the literal margins, and being thus firmly braced in position. For the wide, this pressure is not exerted, and thus support is wenting, the tengue is merely projected into position, and ferus upon nothing, or only spreads itself against the tooth or other parts on each side, and finds in any way but slight support,—hence the commonly abrupt character and naturally short quantity of the wide "A sert of precision and firmness" in the one case, and the opposite in the other, heve been emphatically noticed by Mr Bell (University Lectures) as differentiating quelities of the "primary" and the "wide"—See § 21

The widening cruses change in the shape and size of the whole vewel-chember. It makes it larger in the case of the front vewels (§ 10). In the case of the operators is (inrm, § 8) narrow, ñ (ñsk) wide, it is to be noted that for the narrow the fore part of the tougue is of necessity pressed downward and rather retracted, while for the wide it is projected forward and considerably raised,—in consequence of the videning at the place of constriction. Also in the back rawels (§ 11), the fore part of the tengue is necessarily less retracted for the wide than for the narrow, the lahal remaining or contraction is at the same time less, and is made with less tension. The chemiel through the back part of the mouth is in all cases mede larger for the wide.—See Figs. 1, 3, 5

The changes in the form and position of the tongue, from the narrow to the wide, corry with them corresponding changes in the position of the lower low

All the front rewells are converted from narrow to wide in the way shown for A (cfire), in Fig 3, and all the back vowels, as shown for oo (food), in Fig 5

§ 11 The narrow mud the wide may, in n given ease, be regarded either as different vowels or as different forms of the same vowel, but are commonly spoken of as different vowels. The two of each pur are perceived as cheracterized by the same fundamental quality, and as differentiated by features common to all the wide and the opposite appearance to all the wirew.

§ 15 There oro intermediate degrees of morrow and wide which need to be noticed (§§ 23, 48), and there are forms of forcible tengue pressure away from the painte, making vowels still more open than what we call the wide, and with prolonged quantity, as heard in certain provincial and rustic modes of speech (see § 50). There are also various shades of sound between the high and mid, and between the mid and low. And overy vowel is subject to variations in position and in sound as conjoined with different consonants. These many and minute varieties can not all be defined with accuracy. In a vowel scheme for ordinary uses, only the more prominent and plainly distinguishable diversities are to be marked, and the fixed points on the scale are to be taken with some letitude of variation.

In the case of the open threat or pharyngeal vowels, of which we have noted a norrow, it (arm), and a wide, it (1st), in nicer malysis might give os many varieties, though not so strongly marked, as we have in the other groups, their is to say, a high, a mid, and a low, and of each of these a norrow and a wide. But, for ordinary orthorpical purposes, such a minute subdivision is unnecessary. Only, when the wide a is prolonged, it takes a narrow form, but not identiced with it (irm), being made with the place of constriction higher up in the plarynx. The vewel quality, as unde higher or lower in the way here described, will noturally very with the higher or lower pitch of the voice. And it is to be remarked that the ordinary "Italian a" in English, as in father, etc., is heard in various forms as higher and lower in organic position. The a (usic) will, indeed, be ordinarly higher as well as wider then the it (irm).—See § 50.

§ 16. (a) There is a fourth order of vowels in addition to the three above described (§§ 8, 10, 11), though it would not be altogether amiss to regard it as a variety running through the other three. To this the term MIXED is applied in the Beli nomenclature. It comprises, in the Laglish, α (αιτι), α (αμ), on α (αιτι, ενα) Sounds of this order occur also in the first part of the glide between the initial and the final elements of the leag i and on diphthongs (§ 19 0), and make the glide between any vowel not of the mixed order and a following r, to which consonant

takes when in repose For the nerrow, the tengue is pressed with some ferce toward | the mixed rowels themselves bear a close resemblance Unaccented rowels tend, the palate or pheryugeal wall, making coatact and meeting resistance on the lateral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part, to a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over to the neutral for the most part is a sound of this sort, when they do not go over the neutral for the most part is a sound of this sort, when they do not go over the neutral for the most part is a sound of this sort, when they do not go over the neutral for the neutra

rowel—Sec §§ 17, 38, 39, 85-95, 105, 123, 124, 139-14?

These are called "mixed" because regarded as formed by a kind of bleading of the organic positions for the front and the back vowels, or a neutrality between them. Though the term, as thus understood, is not wholly imprepriate, the more essential characteristic of this class is that the passage of the place of constriction—which in this case is both longer and much more open than it is for the other vowels—has the part of the tengue along the middle line depressed and the lateral borders raised, so us to form a sort of trough, and to make, in conjunction with the palate, in rough approximation to a cylindrical channel.\* Instead of a passage with cross section somewint crossent shaped, concave on the palate and convex on the tougue, as for other vowels, we have a passage concave on both tougue mid palate. And this passage may he regarded an constituting the entire vowel chamber, being, as it is, the main and the effective perton of all that might be included in the designation.

(b) The vowels of this class may properly be subdivided into FFONT and BACK, and under each may be distinguished a HIGH, a MID, and a LOW, also, under each of these, a NARROW and a VIDE. The front mixed are made mainly under the hard palate, and the back mixed mainly under the self palate. For the high of each the vowel-chamber reaches well forward, and in the change from lugh to nid, and again from mid to low, falls back romewhat in place, and is made larger in dimension. The English A (Arn), narrow, and K (Hip), wide, are mid-back mixed; E (Forn), narrow, and E (over), wide, are mid front-mixed. The high front-mixed, — which, labelly rounded, maled the in French and in German, — we have in English es the brief luttial element of K (High, § 182)

The high-front mixed, just above described, are closely related to the high front tonces, \$\vec{0}\$ (\$\vec{0}\$\text{cr}\$, \$\vec{0}\$) and \$\vec{1}\$ (\$\vec{111}\$), the mid, \$\vec{0}\$ (\$\vec{0}\$\vec{0}\$\vec{0}\$), to the mid front, \$\vec{0}\$ (\$\vec{0}\$\vec{0}\$), a variant pronunciation in ferm, enteropy, to low instead of mid,—more common formerly them at present,—is nearly related to the low-front, \$\vec{0}\$ (\$\vec{0}\$\text{cd}\$) and \$\vec{0}\$ (\$\vec{0}\$\text{cd}\$), \$\vec{0}\$ (\$\vec{0}\$\vec{0}\$\vec{0}\$), though not so obvious, because these (\$\vec{0}\$ and \$\vec{0}\$) are labelly rounded, while the \$\vec{0}\$ and \$\vec{0}\$ are not so, or but slightly if at all, a veriety, low instead of mid, beard as a directic or an individual peculiarity in the pronuncition of these towels, has a quite obvious affinity to the open threat, is (infin.), is (\$\vec{0}\$\vec{0}\$\vec{0}\$). The Diagram exhibits these relations in the leading instances. The existence of the relations of here pointed out justifies the introducing of such terms as front-mixed and back mixed.

The fi (firn) and I (forn) are distinguished as narrow, from fi (fip), I (evIl) will. They are marked as such by the executed characteristics of the narrow and wide of the other groups (§§ 13, 21), only in this case we have for the wide a concavity made less deep, instead of a convexity flattened down, and we have the bracker action for the narrow made by a pull downward on the middle line and a fine pressure at the sides. It is no matter if, by a partial change in signification, of a kind not uncommon in secutific as well as in popular language, it so comes about that the wide have the interval between tongue and pulate no greater in time case than the narrow, since the essential and more important characteristic remains, as before described (§ 13)

(c) The rounding of the tongue in these rowels produces an offect for the car somewhat like that of hip rounding. Tongue-rounding and hip-rounding are combined in the French on and ii, German is and ii. The term tongue rounded would in feet describe the whole class more occurriely than mixed. It is to be noticed that the hip-rounding takes a characteristically different shape in the mixed from what it does in the beck rowels. There is some degree of hip-rounding in ii (vise), and even a slight degree in if (vise), and even

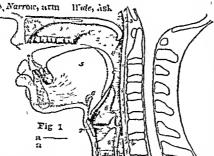

(d) The mixed vewels are closely allied to the consenant r, into which they are

They the or dismissioned heise tooks about a reasonable had are distinguished as independent and an experimentally (§ 1% p. n. Damen, of contract take abstraction from their environment.
As appeared by this environment as Ting this work or picture, quartery was not except their

muscles that drive the air from the lungs, but of those which stretch and stiffen the vocal cords for tone vibration, and of these which hold the mouth organs in the various positions and configurations for vowel resonance, and move or hold them for the consonant articulations. We thus bave reaction against, as well as direct propulsive action upon, the rocal current And much of this reaction goes not to increase the loudness, or power, of the sound, but to impress upon it certain modifications with greater distinctness and effectiveness Thus, the prominonee given by necentual stress is not merely due to greater londness, or intensity, of sound, but sometimes as much, if not more, to the fuller distinctness of the articulation

Besides simple accentual stress, we shall have occasion in the sequel (§§ 163, 164, 275) to consider stress as laid upon different parts of a syllable, or of a vowel or consonant element, -namely, the beginning, middle, or end, -and as gradual or abrupt

§ 32. Stress in utterance is a thing of degree, and is entirely relative te an absolute determination is found in the least stress with which a syllable can be uttered and yet be perceived as a syllable Above this least degree in one syllable or mero, other degrees may exist in other syllables of the same word, and thus form a ground for distinguishing a primary, a secondary, or even a tertiary accent

§ 33 In Fightsh, stress is the chief, and is commonly regarded as the sole, constituent of accent. Yet, quantity is ordinarily combined with stress that is to say, syllables that take the absolutely least degree of stress commonly take, at the same time, the absolutely shortest quantity, that is, the shortest possible for the syllable and with higher degrees of stress there go corresponding prolongations in quantity and quantity, in its turn, carries stress along with it. The two things are separable, but, in Eaglish, the two are ordinarily combined, so that an increase or disarnution of the one involves an increase or diministion of the other - See § 30

§ 34 The syllable or syllables that, in a word or phrase, may he uttered with the absolutely least stress and quantity—or with a near approach to this quite least degree—are said to be LYACCENTED. The one syllable which takes the relatively greatest stress and prolongation is, of course, an ACCENTED syllable. In many words of several syllables — usually of more than three—there is occasion to not two accents, a stronger and a weaker, denominated a PRIMARY and a SECONDARY accent, distinguished in this Dictionary by a licaver and a lightor accentual mark, as, e g, mag'ni-fi'or, af'fa-bil'i ty Thero is, in many three syllable words, as, e g, mag'ni-fi'or, af'fa-bll'i ty such a secondary accent It may fall on the first syllable, as in un'der-take' con'tra-dict', in which case it is usually marked in dictionaries Or it may fall on the third and flual syllable, as in mng'ni-fy, the final syllable of this word Laving equal stress with the third in mang'ni-fi'er, and thus differing from the third in van'i ty, and as in the verb proph'c-st, which differs from the noun proph'e-cy in such cases it is not the custom to insert the accent mark, in this Dictionary, when the vewel of the syllable is long, the secondary recent is implied by the mark of long quantity, as, rangint if, ded'i-c'ite, turipen time

There are, also, words of two syllables, neither of which can be properly spoken with the absolutely least stress and least quantity, such as n-men, fare-well, conquest, horse-rake, house-top, heading most of the two-syllable compounds, and many words not of that class as joined with other words in a phrase or n sentence, the more feebly accented of the two syllables has accentual prominence above the unacconted syllables with which it stands associated Thus, the & in winc's pross, ab'scess, con'test, ac'coss, re'gress, etc, differs from the & in lifer. ess, tall'est, av'es, Con'gress, etc There may be as strong a secondary accent employed in dis-taste', dis prove', etc , as in dis're gard', dis're pute' has not been common to mark such words as taking a primary and a secondary necent, one of the syllables having been reckoned as necented, and the other as unaccented; though the fact of the two necents is sometimes noticed by grammarians The New Fuglish Dictionary by Dr Murray gives the two marks in the case of n-men and a number of two-syllable compounds, and the same is done in this

There are no principles by which to determine the necent in English , and in many cases some variation from the more customary form will pass unnoticed eral tendency of the language is to carry the chief accent back towards or to the first ernt tendency of the language is to early the cine meet accent covariant of to the hirst syllable. In the case of some two-syllable words, the final one is necented for the verb, and the other for the noun or adjective, as, con test, and con'test, sub-ject, and sub'ject, ab-sent, and ab'sent, etc. But many others are accented alive for both noun and verb, as, de fent, re gard, at-incle, enp'ture, gesture, al ly', re-marit', etc

§ 35 It is to be observed that there are distinguishable degrees and shades of accentual stress and quantity, besides the two which we mark as primary and secondary. No less than four or five degrees may be found in some single words, such, for Instance, as incommunicability Also, there can be, in this matter, no precise determination of degree, and hence it becomes, in many cases, a mee question for decision as to whether a spliable should or should not receive the mark of secondary accountiation. Initial and final syllables usually make no more than a quite near arreach to an absolutely least accent, this falls more commonly and properly upon medial syllables.

That differences of accent will have effect in MODIFYING OR CHANGING THE QUALITY of articulate elements is evident from the foregoing definitions of ricess nul of quantity. Certain of the elements require a considerable degree of articulative stress and some extent of time for their clear enunciation, while others articlements and some extent of time for open cical chumerton, while others are committee with a more relaxed, or less tense, condition of the organs, and with a quicker deliverance of the sound. It is, however, the quantity, and not the stress, that directly affects the quality—See §§ 30, 33.

§ 37 All the naturally look voxels (§ 21) and the diffusions are under acceptual stress, either primary or secondary (though indicated in the Dictionary).

may be, conclude only by the vowel quantity) they never occur under the weakest stress; they can not suffer weakening or loss of accent without alteration of quality

the last analysis, into muscular tension, -- tension, bo it observed, not merely of the | T (Toe), eithough, as thus weakened, these do not come down to the absolutely least necent, - see §§ 21, 42 The fi in scrifte is nearly as wide as the & in boningt The second & in co'res, when it turns to &in ce're-ai, is hardly distinguishable from the quite wide i in se'ri al. The t in they' and & in ev'er differ from v (vld) and v (forn), simply as wide from narrow The narrow & of in form' becomes the wide o in in'for ma'tion, the narrow o (vid) in im poso', the wide o (o-bey') in im'po-sition; the narrow is (arm) in b ir'bn-rous is considerably widezed in bir-bu'ri an, if it does not indeed become the quite wide a (ask) - See § 15 and the Diagram A diphthong, when deprived of accent, is necessarily curtailed, - either preserving the middle portion (§ 19), as milloril (my lord), or the middle and terminal element, as in 1-o'ta (§ 101) or the terminal. as mi lord', - if, indeed, this last be not a survival rather than a development

Among the naturally SHORT VOWELS (§ 21), there are differences to be The high front-wide I (pIt, § 104) undergoes but slight alteration as deprived Thus, between the youels in the accounted and the unrecented syllables in pit'i ful, fin'ish, in'fi nite, in stil', there need he only a slight and hardly appreciable difference in quality The mid-front-wide & (Ind, § 83) with least accent tends to I (III), as in riv'et, kitch'en, riv'et ed, helr'esses In situations where it holds its proper quality but slightly modified, — as in Cf-face', Cx-ist', though weakened, it does not sink to the degree of least accent, but here, in very rapid speech, it may fall into the neutral-vowel sound (§ 17) The low-front-wide A (hm, \$ 50) is not er given with quite the least accent, not it may have a weakened accent, tith a slight modification of quality, as in at-tack', af-ford', al low', ac-cept', and in rapid speech may change to a (ask) and then fall to the neutral place, —nad especially in memphatic monosyllables, such as unit, etc. The Lean not itself gradually pass into an obscure you el sound. It is apt to drop forward into & thus accept and except are not distinguished by the illiternic, and c'in in vulgar speech becomes ken, and even kin

§ 39 In the other naturally short vowels, there is a general tendency, on the remissien of accent, to fall towards or sink into the neutral vowel sound (§ 17), a sound which is taken only by syllables with the least necent. The o in con-nect', rec-olloct', etc (§ 120), has some tendency this way, but rather adheres to its proper sound, yet as medified and somewhat obscured, but does not, in such case, take quite the absolutely least accent. The letter o in final syllables with the least accent, as in fel'on, at'om, big'ot, act'or, ote (§ 124), may be regarded as first tabling a it sound as in son, or a sound of that class, whence it often passes over to the obscure neutral sound The u m aw'ful, ful fil', etc (§ 138), has some tendency to the neutral quality, but is well able to retain its proper sound somewint modified. The it (18h) and it (Mp) need suffer but slight alteration by the meahening or less of acceut, as m so'fn, hot'.1-n3, cun'cus, un done', etc., — partly perhaps because they are so near to the neutral vowel

§ 40 The TENDLACIES, on the remission of accout, may be survied up as fol-The narrow long vowels tend to the wide form, - see §§ 21, 37, and the Dia Of the wide short rowels, these at the three extremes of the scale, namely, a (asic), oo (foot), and I (III), and also the mixed I (II), bave their quality but shightly changed by loss of necent, - & (End) and & (Min), of the front group, tend in the forward direction, though a fair) has equal proclivity toward a (ask) or a (app) and thus to the neutral vowel,—for all the wide back vowels, namely, a (vid), b (vines), u (full), or oo (foot), the tendency is to the neutral form, into which, indeed, overy short vowel will sometimes fall. In general, the marrow and long, when shortened and widened, may then further, in very rapid speech, take the course of the wide short vowels, as indicated above — See § 48

In hurrled and careless colloquial speech, these modifying and obscuring tendencies, in both word and phrase, are intensified. Such colloquial usage, however provident it may be, will be acknowledged us a deviation from the standard of correct pronunciation. In England, the virtual obliteration of the secondary accent of words as a common fault. s a common fault. The opposite error of exaggerating the secondary accent is more or less common in America, but only to a limited extent among the well educated

§ 41 These tendencies take the REVERSE DIRECTION when, instead of secent remitted or weakened, we have the quantity of a vowel, or both the stress and quantity, increased In all cases of quite deliberato speech—as in orntorical delivery, and especially in that most effective kind of emphasis which makes use of long-drawn time,—also in the measured rectal of verse,—we have increased quantity and stress upon both unaccented and accented syllables, while yet their relations to each other as such remain unchanged. The contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contraction of the contra as such remain unchruged The ordinarily obscured vowels of unaccented syllables are then and thus made to take some clear rowel sound. It is often a nice point to determine what the sound is that is thus to be taken. It should be, if possible, in the sound is that is thus to be taken. every case, a sound between which and the obscure unaccented sound a gradual transition in possible and natural and easy. It will not, indeed, for the most part, reach the exact and full sound proper to the vowel as necented, — thus, in the word sen'fite, however deliberately spoken, the vowel as necented, — thus, in the stale of the exact sound it has in the word fite, — see § 42. But it should make a more or issue near approach to the more or less near approach to this, — yet retaining enough of the modified form to Indicate that it belongs to an unaccented or weakly accented syllable

§ 42 In the marking of the pronunciation of unaccented syllables, in this Dictionary the interest of the pronunciation of unaccented syllables, in this Dictionary the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interest of the interes and a in Infant, oral, etc (§ 69), excepted—the mark of that one of the clear towels employed in accented syllables to which the unrecented vowel is to be considered as making the property and the unrecented vowel is to be considered as making the property approximately and the unrecented vowel is to be considered as making the property approximately and the clear that the control of the clear that the control of the clear that the control of the clear that the control of the clear that the control of the clear that the control of the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear that the clear sidered as making the nearest approach when properly uttered in quite deliberations, as a stronger, and mit, cor rect. The sound thus indicated should at all times be held clearly in the mit. specific,  $\mathbf{G}_0$ ,  $\mathbf{G}$ Practical matter, it is doubtless best to indicate the modified sound by a modification Fress; they can not multi wrakening or 1048 of account minimum. Thur, C (6-3 cont', § 78) differs in quality from 5 (5-3 c), f (1-de'n, § 101) from D l'pir, etc., from the narrow 5 in firm, mir'ey, etc. The absence of acceut sufficiently distinguishes the wide  $\tilde{\epsilon}$  in every

muscles that drive the air from the lungs, but of those which stretch and stiffen the vocal cords for tone vibration, and of those which hold the mouth organs in the various positions and configurations for vowel resonance, and move or hold them for the consonant articulations. We thus have reaction egainst, as well as direct propulsive nction upon, the vocal current And much of this reaction goes not to herease the loudness, or power, of the sound, but to impress upon it certain modifications with greater distinctness and effectiveness Thus, the promiuence given by accentral stress is not merely due to greater londness, or intensity, of sound, but cometimes as much, If not more, to the fuller distinctness of the articulation

Besides simple accentual stress, we shall have occasion in the sequel (§§ 163, 164, 275) to consider stress as laid upon different parts of a sylloble, or of a vowel or consonant element,—namely, the beguning, middle, or end,—and as graduol or abrupt \$32. Stress in utterance is n thing of degree, and is entirely relotive. The newest The pearest

to an absolute determination is found in the least stress with which a sylloble can be uttered and yet be perceived as a syllable Abovo tims least degree in one syllable or more, other degrees moy exist in other syllables of the same word, and thus form a ground for distinguishing a primary, a secondary, or oven a tertiary accent
§ 33 In English, stress is the chief, and is commonly regarded as the sole, constitu

ent of accent Yet, quantity is ordinarily combined with stress that is to say, syllables that take the absolutely least degree of stress commonly take, at the same time, the absolutely shortest quentity, that is, the shortest possible for the sylloble, and with higher degrees of stress there go corresponding prolongations in quantity, and quantity, in its turn, curles stress along with it. The two things are separable, but, in English, the two are ordinarily combined, so that an increase or diminishing the stress along with it. nution of the one involves an lucrouse or diminution of the other - See § 30

§ 34. The syllable or syllables that, in a word or phrase, may he uttered with the abountely least stress and quantity—or with a near approach to this quito least degree—are said to be unaccented. The one syllohle which takes the relatively greatest stress and prolongation is, of course, an ACCENTED syllable words of several syllables - usually of more than three - there is occasion to noto two recents, a stronger and a weaker, denominoted a PRIMARI and a SECONDARI accent, distinguished in this Dictionary by a heavier and a lighter accentual mark, as, e.g., mag'ni-fi'or, nt'fa bil'i-ty There is, in many three syllable words, such a secondary accent It may fall on the first syllable, as in unider take, con'tra dict', in which case it is usually marked in dictionories. Or it may fall on the third end finol cylleble, as in mag'ni fy, the final syliable of this word Leving equal stress with the third in ming'ni fer, and thus differing from the third In van'i-ty, and as in the verb proph'e-sy, which differs from the nonn proph'e-cy in such cases it is not the custom to insert the accent mark, in this Diction ary, when the rowel of the syliable is long, the secondary accent is implied by the mark of long quentity, as, mag'nt fy, dod's cate, tur'pen-time

There are, olso, words of two syllobles, neither of which can be proporly spoken with the absolutely least stress and least quantity, such as a men, fare-well, conquest, horse-rake, house-top, heliding most of the two-syllable compounds, and many words not of that closs as joined with other words in a phrase or n sentence, the more feebly recented of the two syllables has accentual prominence above the unaccented syllables with which it stands ossociated. Thus, the & in winepress, nb/secss, con/test, nc/elss, re/gress, etc, differs from the 6 in heir/test full etc, nr/cs, Con/gress, etc. There may be os strong a secondary occent the cas, in the case of the protos, etc, as in dis're gard', dis're putes' It has not been common to mark such words as taking a primary and a secondary accent, oue of the syllables having been reckoned as accented, and the other as unrecented, though the fact of the two occents is remetimes noticed by grammarians The New English Dictionary by Dr Murray gives the two marks in the case of n-men and a number of two-splishle compounds, and the same is done in tius

There are no principles by which to determine the eccent in Figlish , and in many cases some varietien from the more customary form will pass unnoticed. The gencral tendency of the language is to carry the chief occent back towards or to the first syllable In the care of some two-syllable words, the final one is accented for the verb, and the other for the noun or odjective, os, con test' and con'test, subject' and sub'ject, ab-sent' and ab'sent, etc. But many others are accented alike for both noun and verb, as, do fent', re gard', at tack', enp'ture, ges'-

ture, at ly', re-mark', ote \$35 It is to be observed that there are distinguishable degrees and shades of accentual stress and quentity, besides the two which we mark as primary and sec-No less than four or five degrees may be found in some single words, such, for instance, as incommunicability. Also, there can be, in this matter, no pre-cise determination of degree, and herce it becomes, in many cases, a mee question for decision as to whether a syllable should or should not receive the mork of secondary accentuation Initial and final syliables usually make no more than a quite near approach to an absolutely least occent; this falls more commonly and properly upon

\$30 That differences of accent will have effect in "ODIFYING OR CHANGING
THE QUALITY of articulate elements is evident from the foregoing definitions of stress and of quantity Certain of the elements require a considerable degree of articulative stress and some extent of time for their clear enunciation, while others are compatible with a more relaxed, or less tense, condition of the organs, and with a

are computable with a more relaxed, or less tense, condition of the original which a quicker deliverance of the sound. It is, however, the quantity, and not the stress, that offectly affects the quality — See §§ 50, 33.
§ 57. All the naturally fone now due (§ 21) and the diplottings are under at reducil stress, either primary or recordery (though indicated in the Diethonary, it and entiral stress, either primary or secondary (though indicated in the inectionary, it primary for some first primary or secondary). They have the fully account under the weakers and by the rowel quantity) they have never occur under the weakers practical mater, it is doubtless best to indicate the modern that they have weakers best to indicate the modern that they have weakers best to indicate the modern that they have weakers best to indicate the modern that they have when fully account materials are sufficiently distinguished the inerty, \$ 78) differs in quality from \$\tilde{v}\$ (Cool), \$\tilde{v}\$ (de'a, \$\frac{1}{2}\$ IOI) from \$\tilde{v}\$ (hough they have when fully account materials the mark they have when fully account materials the mark they have when fully account materials the mark they have when fully account materials and they have when fully account materials and they have when fully account materials and they have when fully account materials are the market and they have when fully account materials and they have when fully account materials are the modern than the sufficient materials and they have when fully account materials are the modern than the sufficient materials and the materials are the materials and they have when fully account materials are the materials and they have 
the last analysis, into muscular tension, - tension, be it observed, not merely of the | I (fee), although, as thus weakened, these do not come down to the absolutely least recent,—see §§ 21, 42 The fi in sen'fite is nearly as wide as the fi in bon'net. The second of in ce'103', when it turns to one co'roal, is hardly distinguishable from the quite wide I in so'i I al Tho o in o-boy' and o in ev'or differ from o (vid) and o (form), simply as wide from narrow The narrow o of in form' becomes the wide of in in for-ma'tion, the narrow o (old) in im pose', the wide & (&-bey') in im'po si'tion, the nurrow it (lirm) in b ir'ba-rous is considerably widened in bir ba'ri an, if it does not indeed become the quite wide n (11SIc) - See § 15 and the Diogram. A diphthong, when deprived of accent, is necessarily curtailed, - either preserving the middle portion (\$ 19), as mil lord' (my lard), or the middle nud torminal element, as in 1-o'ta (§ 101) or the terminal, ns mi-lord', - if, indeed, this last be not a survival rather than a development

§ 38 Among the naturally SHORT VOWELS (§ 21), there are differences to be The high-front-wide i (pit, \$104) undergoes but slight alteration as deprived of accout Thus, between the vowels in the accounted and the unaccented syllables in Dit'i-ful, fin'ish, in'ii-nite, in stil', there need be only a slight and hardly appreciable difference in quality The mid-front-wide & (End, § 83) with least occentends to I (III), os in riv'ct, Intel'an, riv'at ad, Incir'ess-as In situations where it holds its proper quelity but slightly modified, - as in cf-face, or ist', though weakened, it does not sink to the degree of least accent, but here, in very rapid speech, it may foll into the neutral-vowel sound (§ 17) The low-front-wide n (Am, § 56) is never given with quite the least accent, yet it may have a weekened accent, with a slight modification of quality, as in ht-tuck, hf ford, allow, ac-cept', and in rapid speech moy change to a (ask) and then fall to the neutral place, - and especially in memphatic monosyllables, such as and, an, am, that, The is con not itself gradually pass into an obscure rowel sound. It is apt to drop forward into & thus Account and Except are not distinguished by the flutcraic, and c'in in vulgar speech becomes ken, and oven kin

§ 39 In the other naturally short vowels, there is a general tendency, on the remismon of accout, to fall towards or sink into the neutral-rowol sound (§ 17), a sound luch ie taken only hy syllables with the least accent. The o in con nect, rec ofloct, etc (§ 120), has some tendency this way, but rather adheres to its proper sound, yet as modified and somewhat obscured, but does not, in such case, take quite the absolutely least accent. The letter o in flual syllables with the least accent, s in fel'on, at'om, big'ot, act'or, etc (§ 121), may be regarded as first taking & ŭ sound as in son, or a sound of that class, whence it often passes over to the obscure neutral sound The 11 in aw'ful, ful-fil', cte (§ 138), has some tendency to the neutral quality, but is well able to retain its proper sound somewhat modified The u (isk) and ii (iip) need suffer but slight alteration by the neakening or less of accent, as in so'1.1, bot'n-113, can'ous, un-done', eto, —partly perlaps because they are so near to the ucutral sowel

§ 40 The TENDENCIES, on the remission of necent, may be SUMMED by es fol-The narrow long vowels tend to the wide form, - see §§ 21, 37, and the Dia Of the wide short vowels, those of the three extremes of the scale, namely, i (úsle), do (foot), and I (III), and also the mixed I (up), have their quality but slightly changed by loss of accent, — & (End) end & (Kim), of the front group, tend in the forward direction, though & (Kim) has equal proclisity toward a (ask) or i (tip) and thus to the neutral rowel,—for all the wide back rowels, namely, o (5dd), o (5bey), u (full), or 60 (160t), the tendency is to the neutral form; into which, indeed, every short rowel will sometimes fell. In general, the narrow will have the every short rowel will sometimes fell. nud long, when shortened and widened, may then further, in very rapid speech, take the course of the wide short vowels, as indicated above — See § 48

In hurried and careless colloquol speech, these modifying and obscuring tenden-cies, in both word and phrase, are intensified Such colloquial usage, however prelent it may be, will be echnowledged as a deviction from the standard of correct pronunction. In England, the virtual obliteration of the secondary secent of words as a common fault. is a common fault The opposite error of exaggerating the secondary accent is more or less common in America, but only to a limited extent among the well educated.

§ 41 These tendencies take the REVERSF DIRECTION when, instead of accent remitted or weakened, we have the quantity of a vowel, or both the stress and quantity, increased In all cases of quite deliberate speech — as in oratorical delivery. and especially in that most effective kind of emphasis which makes use of long-drawn -also in the measured recital of verse, —we have mercased quontity and stress upon both unaccruted and accented syllables, while jet their relotions to each other as such remain unchanged The ordinarily obscured vowels of unaccented syllables are then and thus made to take some clear vowel sound. It is often a nice point to determine what the sound is that is thus to be taken. It should be, if possible, in a provide the sound is that is thus to be taken. every case, a sound between which and the obscure unaccented sound a gradual transtion is possible and natural and ers. It will not, indeed, for the most part, reach the exact and full sound proper to the vowel as accented,—thus, in the word take the exact sound it has in the word fite, however deliberately spoken, the vowel in the final syllable would never take the exact sound it has in the word fite,—see § 42. But it should make a more or less near opproach to this,—yet retaining enough of the modified form to indicate that it belongs to an unaccented or world accessed with the indicate that it belongs to an unaccented or weakly accented sylleble

§ 42. In the marking of the prominciation of unaccented syllables, in this Diction ary, the intention is to give in each ease—the e in pru'dent, nov'el, etc (§ 91), and a in infant, o'ral, ctc (§ 69), excepted—the mork of that one of the clear vowels employed in accented syllables to which the unaccented vowels abberuit sidered as making the necessary approach when properly utfored in quite deliberate speech; as, Cx-Presc, and mit, correct. The sound thus indicated should at all times be held clearly in the mind of the necessary and the properly utfored in a constant of the properly in the mind of the necessary and the properly in the mind of the necessary and the properly in the mind of the necessary and the properly in the mind of the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the necessary and the n times be held clearly in the mind of the speaker. In the case of the naturally long vowels when under weakened occut  $(\bar{u}, \bar{v}, \bar{t}, \bar{v}, \bar{u})$ , it vould, in theory, have been sufficient to retain the mark they have when fully accented  $(\bar{u}, \bar{v}, \bar{t}, \bar{v}, \bar{u})$ ; but, as a practical matter, it is doubtless have when fully accented  $(\bar{u}, \bar{v}, \bar{t}, \bar{v}, \bar{u})$ ; but, as a practical matter, it is doubtless best to indicate the modified sound hy a modification of the mark. The thousand of the mark. The absence of accent sufficiently distinguishes the wide & in ever,

muscles that drive the air from the lungs, but of those which stretch and stiffen the vocal cords for tono vibration, and of those which held the mouth organs in the varions positions and configurations for vowsl resonance, and move or held them for the consenant articulations. We thus have reaction against, as well as direct propulsive action upon, the vocal current And much of this reaction goes not to increase the foundess, or power, of the sound, but to impress upon it certain modifications with greater distinctness and effectiveness Thus, the prominence given by accontual stress is not merely due to greater loudness, or intensity, of sound, but sometimes as much, If not more, to the fuller distinctness of the articulation

Besides simple accentual stress, we shall have occasion in the sequel (§§ 163, 164, Besides stress as laid upon different parts of a syllable, or of a vowel or consonant element, -namely, the beginning, middle, or end, -and as gradual or abrupt

§ 32 Stress in utterance is a thing of degree, and is entirely reletive. The nearest to an absolute determination is found in the least stress with which a syllable can be uttered and yet be perceived as a syllable Above this least degree in one syllable or more, other degrees may exist in other syllables of the same word, and thus form ground for distinguishing a primary, a secondary, or oven a tertiary accent

§ 33 In English, stress is the chief, and is commonly regarded as the sele, constituent of accent. Yet, quantity is ordinarily combined with stress that is to eny, syllables that take the absolutely least degree of stress commonly take, at the same time, the absolutely shortest quantity, that is, the shortest possible for the syllable, and with higher degrees of stress there go corresponding prolongations in quantity, and quentity, in its turn, carries stress along with it. The two things are separable; but, in Inglish, the two are ordinarily combined, so that an increase or dumuntion of the one involves in increase or diminition of the other — See § 30

§ 34 The sylloble or syllables that, in a word or phruse, may be uttered with the absolutely least stress and quantity—or with a near approach to this quite least degree—are said to be UNACCENTED. This one syllable which takes the relatively greatest stress and prolongation is, of course, an ACCENTED syllable In many words of several syllables—usually of more than three—there is occarien to note two accents, a stronger and a weaker, denominated a PRIMAR) and a SECONDARY accent, distinguished in this Dictionary by a liewier and a lighter accountal mark, as, e.g., mag'ni-fl'er, af'fa bill'i ty There is, in many three-syllable words, such a secondary accent it may fall on the first syllable, as in un'der take', con'tra dlet', in which case it is usually marked in dictionaries. Or it may fall on the third and final sylleble, as in mag'ni fy, the final syllable of this word laving equal stress with the third in mag'ni fi'er, and thus differing from the third in van'i-tv , and as in the verb proph'c-sy , which differs from the noun proph'c-cy in such cases it is not the custom to insert the accent mark, in this Dictione-cy in such cases it is not the custom to insert the according to in this Dictionary, when the vowel of the syllable is long, the secondary accent is implied by the mark of long quantity, as, mag'ni fy, dcd'i-tite, tur'nen tine.

There are, also, words of two syllables, neither of which can be properly spoken.

with the absolutely least stress and least quantity, such as a men, inre-weil, conquest, horse-ruke, house-top, including most of the two-syllable compounds, and many words not of that class as joined with other words in a phrase or a sentence, the more feebly accented of the two syllables has accentual prominence above the unaccented syllables with which it stands associated Thus, the E in wine'press, all'scess, con'test, ac'ess, re'gress, etc., duffers from the E in heir'press, anyseess, convest, access, regress, etc., duters from the c in fiery-ies, inil'est, ax'es, Converess, otc. There may be as strong a secondary accent employed in distaste, dis-prove, etc., as in district gard, district pute. It has not been common to mark such words as taking a primary and a secondary accent; one of the syllables having been reckened as accented, and the other as unrecented, though the feet of the two accents is sometimes noticed by gramma-rius. The New English Inchangry by Dr. Murray gives the two marks in the case of n-men and a number of two-syllable compounds, and the same is deno in this work

There are no principles by which to determine the accent in English , and in many cases some variation from the more customary form will pass unnoticed. The general tendency of the language is to carry the chief accent back towards or to the first syllab'e In the case of some two-syllable words, the final one is accented for the verb, and the other for the nonn or adjective, as, con test' and con'test, subject' and sub'ject, ab-sent' and ab'sent, etc. But many others are accented Jeer and Run'jeer, and serv and any serv, see But many others are secented alive for both norm and verb, as, do fort', re gard', at-tack', cap'ture, gos'

ture, ally', re mark', etc.
523 It is to be observed that there are distinguishable degrees and shades of accentual stress and quartity, besides the two which we mark as primary and sec-No less than four or five degrees may be found in some single words, such for instance, as incommunicability. Also, there can be, in this matter, no precise determination of degree, and hence it becomes, in many cases, a nice question for decision as to whether a syllable should or should not receive the mark of secondary accent ration. Initial and final syllables usually make no mere than a quite near affronch to an absolutely least accent; this falls more commonly and properly apon

tacellal sylubles.

On That differences of accent will have effect in Modifying on Charging to That differences of accent will have effect in Modifying the foregoing definitions of THE QUALITY of articulate elements is evident from the foregoing definitions of

the last analysis, into muscular tension, -- tension, be it observed, not merely of the | T (Tee), although, as thus weakened, these do not come down to the absolutely least The second o in ce'rt's', rben it turns to oin ce'rt'-n1, is hardly distinguishable from the quite wide I in Se'ri al The & in 5-bey' and & in ev'er differ from the quite wide I in Se'ri al The & in 5-bey' and & in ev'er differ from & (51d) and & (fern), simply as wide from narrow The narrow & of in form' becomes the wide of in in'ion marton, the narrow o (ofd) in im pose, the wide & (5-bcy') in im'po si'tion, the narrow it (irm) in bar'by rous is considerably videned in bar-ba'rl in, if it does not indeed become the quite wide à (asle) - See § 15 and the Diagram A diphthong, when deprived of occent, is necessarily curtailed, — either preserving the iniddle pertion (§ 19), as mil lord (my lord), or the middle and terminal element, as in f-o'ta (\$ 101) or the terminal, as mi-lord', - if, indeed, this last be not a survival rather than a development

§ 38 Among the naturally SHORT VOWELS (§ 21), there are differences to be noted The high front-wide i (pit, § 104) undergoes but slight alteration as deprived of accent Thus, between the vowels in the accented and the unocconted syllables in pit'i ful, fin'ish, in'ii-nite, in stil', there need be only a slight and hardly appreciable difference in quality The mid-front-wide & (&nd, § 83) with least occentends to i (iii), as in riv'ot, kitch'on, ilv'ot-od, heir'oss-os In situations where it holds its proper quality but slightly modified, -- as in Ef-face', & ist', -- though weakened, it does not sink to the degree of least accent, but bere, in very rapid speech, it may fall into the neutral-vowel sound (§ 17). The low-front-wide n (Am, § 56) is never given with quite the least accent, yet it may have a weakened neecnt, with a slight modification of quality, as in at-tack', af ford', al low', Mc-cept', and in rapid speech may change to a (ask) and then fall to the neutral place, —and especially in unemphatic monosyllables, such as and, an, an, that, ctc. The a can not itself gradually pass into an obscure rowel sound. It is apt to drop forward into & thus accept and except are not distinguished by the illicrate, and c'in in rulgar speech becomes ken, and oven kin

§ 39 In the other naturally short weels, there is a general tendency, on the remission of accent, to fall towards or sink into the neutral-vowel sound (\$ 17), a round which is taken only by syllables with the least accent. The o in con neof', rec oflect', otc (§ 120), has some tendency this way, but rather adheres to its proper sound, yet as modified and somewhat obscured, but does not, in such ease, take quite the absolutely least accent The letter o in final syllables with the least accent, as in fcl'on, at'om, big'ot, act'or, etc (§ 124), may be regorded as first taking ŭ seund as in son, ora seund of that class, whence it often passes over to the obscure neutral sound. The u la aw'inl, ful fil', etc (§ 138), has some tendency to the neutral quality, but is well able to retain its proper sound somewhat medified The is (1sl.) and if (ip) need suffer but slight alteration by the weakening or loss of aceat, as in so'fa, bot'n-ny, cau'eŭs, ŭn done', etc ,—partly perhaps because they are so near to the neutral vowel

§ 40 The TENDENCIES, on the remission of accent, may be summed up as fel--The narrow long vewels tend to the wide form , - see §§ 21, 37, and the Da Of the wide short vowels, those at the three extremes of the scale, namely, n (nsk), So (foot), and I (III), and olso the mixed il (Up), have their quality but it (insit), 00 (100t), and it (iff), and else the mixed it (ifp), hate their quality obselfshity changed by loss of accent,—6 (End) and it (ifm), of the front group, teal on the forward direction, though it (ifm) has equal proclusty toward a (ask) or it (ifp) and thus to the neutral vowel,—for all the wide back vowels, namely, of (6dd), it (6bcy), it (ifull), or of (foot), the tendency is to the neutral form, into which, indeed, overy short well will sometimes fall. In general, the narrow and long, when shortened and allowed was the firstless in the neutral speech, take and long, whon shortened and widened, may then further, in very rapid speech, take the course of the wide short vowels, as indicated above — See § 48

In lurried and carcless collequial speech, these modifying and obscuring tendencies, in both word and phrase, are nuturalised. Such collequial usage, bowever prevalent it may be wall be collected. lent it may be, will be ocknowledged as a deviation from the standard of correct pronunciation. In England, the virtual obliteration of the secondary accent of words is a common fault The opposite error of exaggerating the secondary accent is more or less common in America, but only to a limited extent emong the well educated

§ 41 These tendencies take the REVERSE DIRECTION when, instead of accept remitted or weakened, we have the quantity of a vowel, or both the stress and quantity by horsess. tity, increased In all cases of quite deliberate speech — as in oratorical delivery, and especially in that most effective kind of emphasis which makes use of leng-drawn time,—also in the measured recetal of verse,—we have increased quantity and stress upon both unaccented and recented syllables, while yet their relations to each other as such remain unchanged. The ordinarily observed young of unaccented syllables are then and thus made to take arms also are then and thus made to take arms also are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are then are th are then and thus made to take some clear youl sound. It is often a nice point to determine what the sound is that is thus to be taken. It should be, if possible, in overy case, a sound between which and the obscure unaccented sound a gradual transation is possible and naturel and easy. It will not, indeed, for the most part, reach the exact and full sound proper to the vewel as accounted, — thus, in the word sen'ate, hovever deliberately spoken, the vowel in the final syllable would never take the exact sound it has in the word fate, -- see § 42 But it should make a more or less near approach to this, - yet retaining enough of the modified form to indicate that it belongs to an unaccented or weakly accented syllable

§ 42. In the marking of the prenunciation of unaccented syllables, in this Incline ary, the intention is to give in each case—the e in pruident, noviel, etc (50), and a in infant, or or of the class THE QUALITY of articulate elements is evident from the foregoing definitions of alreas and of quantity. Certain of the elements require a considerable degree of articulate elements require a considerable degree of and a in infant, o'ral, etc (§ 69), excepted—the mark of that one of the elements require a considerable degree of and a in infant, o'ral, etc (§ 69), excepted—the mark of that one of the elements are comparing the with a more relaxed, or less tence, condition of the organs, and with a query deliverage of the round. It is, however, the quantity, and not the excess, that directly affects the quality—for (§ 20, 3)

§ 77. All the industry plus of vowels (§ 21) and the directions when under weakened accent (the speaker. In the case of the naturally low overs when under weakened accent (the first principle of the organs) of the under weakened accent (the first principle of the principle of the under the mark they have been fully accounted (the first principle of the under the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently distinguishes the wide to indicate the modified sound by a modification of the unart. The absence of accent sufficiently times be held clearly in this mind of the speaker. In the case of the naturally low vowels when under weakened accent  $(\bar{n}, \bar{c}, \bar{t}, \bar{o}, \bar{u})$ , it would, in theory, have been sufficient to retain the mark they have when fully accented  $(\bar{n}, \bar{c}, \bar{t}, \bar{o}, \bar{u})$ , but, as a prictical matter, it is doubtless best to indicate the modified sound by a modification of the mark. The absence of accent modificate the results at the wide  $\bar{c}$  in every

§ 75 The letter c has seven variations of sound: 5, t, c, &, &, &, accented; and &, the wide variant, unacconted, besides its use as a silent letter and its use with consonant value, and besides the sound of obscure quality indicated by e (state), as see in § 94. For e as part of a digraph, see §§ 44, 49, 57, 70, 76, 80, 82, 84, 85, 97, 99, 103, 104, 108, 113, 126, 131, 141, 143

§ 76 (1) E, & as in Evo, mute, con'creto', cen'tl pulo', etc., with the name sound of the letter, and liaving equivalents as in feet, beam, de-celve', peo'ple, koy, Cre'sar, ma-chine', fleld, quay, Phoe'bus, Por'tu guose', etc. Tho

vowel is commonly called the "long e"

§ 77 This is the high-front-narrow vowel (§ 10) As actually uttered, especially when preceded by a consonant, it is not usually this absolutely simple element it commonly starts at a slightly wider degree, somewhat towards i (III), and moves to a position the closest possible to a consonant T, -in obedience to the diphthongalizing tendency of the language — See § 127.—It is a fault to end it in an actual y sound.
—See Fig 2.

§ 78 (2) E, t in unaccented syllables, us t vent', t-plt'o mt, ert ate', delin't-ate', so-ei't-ty, shorter usually than accented & (&ve), and somewhat less narrow, vorging towards, or sometimes even reaching, the wide I (III) See § 37 § 79 To give I (Np) in place of E (as so-el'N ty), or to give the quite narrow

form & (as so-ci'c-ty); is, in elther ease, offensive to the ear of a correct speaker.

§ 80 (3) E, 9 This, in genuine English words, occurs only with i or y added, so as to make a digraph, as in clight, prey, vein, etc. The sound is identical with fi (file, § 44), and will be indicated by \( \bar{a}\) in the respelling \$81 \cdot \text{In naturalized and half naturalized foreign words, as force, fluide, albee,

ballet, consommé, ailobo, auto-da fl, Jose, and in the interjection of and in a fow other instances, we have this sound of a accented, but without the vanish (§ 45) ln 7 (III) In such cases, it may, in the respelling, be well enough indicated by the symbol fi (§ 48)

§ 82 (4) E, & as in End, pet, ten, er'ror, etc., otherwise as in feather, heli'or, looyard, friend, di rer'e-ss, sa'a-fœt'i-da, bur'y, guess, a'ny, said, ote, the so-called "short e,"—mid-front-wide, correlative of the narrow o (eight), said, ote, falo),—see § 45, 47 The syllable is usually closed by a consonant sound.

§ 83 Un Accented it ocenta, as in the cuse', the large', tf-free', as-tate', trre'no ous, lev'el, in'tel-loet', enr'net, and sometimes it verges to or ton ards I, as in ro'ses, hors'es, fair'est, vis'est, riv'et, end'ed, vick'ed, vvool'en, kitch'en, en-cour'age, — see § 38 The pronunciation of hors'es, chick'en, vvit'ness, as hors'uz, chick'en, wit'aus, — u (un) for e, — is not approved

§ 84 (6) £, ê as in thêre, whêre, also in heir, etc., only before r, —identical in zound with A (eAre, § 49), —heard also as unaccented in whêreby, whôre in', etc

§85 (6) L, & as in fern, err, her, er'mine, vergo, in-fer', per vert'. -otherwise as in sir, bird, earn, mirth, myr'tle, guer'don, etc It occurs before r and in accented syllables, but not when the r precedes a vowel or another r in the following syllable of the same word, as in vCr'y, pör'il, mCr'ry, Cr'ror, hō'ro, pör'i-od, etc, except that verbs having this sound of the letter almost always retain it when inflected or suffixed, as in eon för'ring, de-tör'ring, oon för'rer, ro-för'ri hle, etc,—compare § 49 In England, the word eleric is still commonly pronounced with the 't (urm) sound (§ 57), as Borkoley and Derby were till of lato. And, in New England, an it ('irm) or û (eûro) sound was once usual in such words as sorve, earth, earn, term, otc. For ser'ge int, see § 57 § 86 This is the mid front-mixed-narrow vowel (§ 16), — distinguished as front

from the back û (ûrn), and as narrow from the wide unaccented & (over, § 90)

587 The distinction of sounds here noted, as between & (forn) and û (ûrn) is quite clear, and the majority of orthospists at the present time are in favor of cheering it. It is at the same time true that, by the majority of English speaking people, it is not actually observed. But those who employ only one of these two sounds do not all use the same one there are some who habitually pronounce both fern, or sir, and urn, burn, with the distinctive & (forn) sound, while others give to form and sir the proper  $\Omega(\Omega \mathbf{n})$  sound. The unsettled usage makes such diversity allowable — see § 3. One desiring to find out whether there is for him any distinction of the kind may do so by trying whether he can conceive of a sound admissible in urn, turn, hurl, turbid, and yet objectionable in earn, torm, girl, in terred'

§ 88. By Waller, the o in this case is marked &, as in bod, End, etc., and the 1 is marked in some words &, and in others & (&p) Yet he says. "This sound for o] before r is apt to slide into short u, and we sometimes hear mercy sounded as if of cr and ir, when distinguished from ur, as "deheaces of pronunciation that pre vail only in the more refined classes of society, "describing the sound as one that hes between  $\bar{u}$  ( $\bar{u}$ le) and  $\bar{u}$  ( $\bar{u}$ p) The New English Dictionary, by Dr. Murray, employs between it (iiie) and it (iip) Inc New Linguis Dictionary, by Dr Aurray, employs two different symbols, one for the sound in fern, fir, etc., and another for that in urn, fur, etc., it o rowels being, he says, "discriminated by the majority of orthospists, though commonly identified by the natives of the south of England" The dictionaries of Stormonth and of Ogilvie distinguish between the 6 in hier and the u in build; but they assign the former sound to nearly every case in which we have the smaller are as in himself and the country of the sound of in him.

in bud; but they assign the former sound to nearly every case in which we have the spelling ur, is in burn, hurl, oc-cur', etc., giving the sound as in bud to u before r dendled, as in eur'rent, tur'ret, hur'ry, oc-cur'rence § 80 The 8 (Ern)—the sound as here intended to be understood—is quite near to the French eu, as in jou, jouine, lenr, amateur, etc., and to the German e, oc, as in school, Goethe, etc., the difference being that the French and German words take more of a lablal modification—See §§ 16, 86

§ 90 (7) Utaccerted & (before r), -as in ever, render, lover, sover,

it or inclines to it, - see \$\ 10 b, 135 Closely related to this is the sound explained below (\$\ 91-91); na also the voice-glide (\ 95) - See \$\ 105, 124, 135, 145

§ 91. The o before n in unaccented syllables, -as in pru'dent, sov'en ty, rai'ment, con-ren'ient, cre'dence, de'ern cy, etc , - takès a sound of obscure quality in rapid speech In the case here presented, - of the zi followed by another consonant, -the question arises whether the sound, when prolonged, becomes the same as does that of o before r, -see § 42 In such words as difference, inference, reverent, there is a plain similarity between the road of the middle and that of the final syllable, if the words are pronounced as they usually and naturally are by the majority of well-educated people. The many make the calutihigher than it is before r, but should not change it to C (Liid),—though, indeed, this form is inculexted by some orthocals. The e before n in wool'en, kitch' on, etc., takes properly the & (Euch) sound, which in rapid speech tends toward f (III),—see § 83 To allow a sound like & (Ench) in descent, pen'i tent, sev'en ty, etc , would bring in a tendency in these cases to let the sound fall to I'ffli), which certainly should be avoided Another fault, not less to be avoided, is that of suppressing the ell privident, do'cent, etc., giving only the volce-gide (§ 93), as if to be pronounced privident, etc. In words like com/ment, con'vent,—correct with & (End), not & (ev'er),—we have the final syliable actually under a secondary accent.

\$92 Bofore 1, the unaccented c is, in some error, like that above before n. as in nov'el, in'fi-flot, while in the livel and some others it takes the form explained below (5 95); - but, in many eases, it is commonly and properly given as 6 (čud), thus in jew'el, eru'el, cam'el, gos'pel, fun'adl, an'gel, chan'ncl In some of these, and in other words of the kind, there is considerable diver "

sity of usage ns between these sounds.

§ 93 Anthorntes differ as to the true character of the obscure unaccented sound of o before n, 1, r (\$5 90-72), or hesitate to decide upon it Mr Ellis (Larly English Pronunciation, pp 1161-1163, and Pronunciation for Singers, p 139), prefers most deeldedly his equivalent for & (forn) obscured, rather than & (end), in in'nocent, prividence, etc.,—the same which he gives for the e before r, as in readicer, polyhor, ever, etc. The New English Dictionary, by Dr. Murray, gives the o in moviment, sovier-al. (-cr.), as the "obscure" form of e in yet, ten, and mirks the o in en tally, and also the e in add/od, as the "obscure" form of the vov of that is "long" in ferm, fix, earth, and "ordinary" in ever (-cr) and in mi'tion (-on). Mr. Ellipassigns a quite different sound to the e in add/od, namely, nn'tion (-on) Mr Ellis assigns a quite different sound to the e in add'ed, namely,

that of & (End), or & failing that X (111) These authorities are thus at variance.

§ 94 In the case of words like pru'dent, nov'el, etc (§§ 91, 92), because of the difference of opinion as to what the clear sound of the c before n or 2 should be when prolonged (§ 42), and to avoid misleading such as might not clearly apprehend the sound if I were employed, the rowel will be indicated by a bare Iralio e in the

spelling for pronunciation

\$95 The unrecented rowel of obscure quality before m or I, as above (\$\$91-94), is sometimes reduced to the attenuated form called the soice-glide (§ 17), expressed not only by an e, but by an i or an oronel lotter, — e being most frequently writen after 1,—as in ent'on, henvien, o'pen, shriv'el, a'ble, gen'tio, nar'ilele, bu'sin, cons'in, par'ilou, sea'son, etc In some cases, the articular pound for the n or I is so nerry the same as it is for the preceding consonant that no round need come between such the cases as it is for the preceding consonant that no round and come between such the cases as it is for the preceding consonant that no round and the cases as it is for the preceding consonant that no round and the cases as it is for the preceding consonant that no round as the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case of the case need come between, oud the ra or I may serve in place of a vewel for the formation of a separato syllable, as in ent'en, gold'en, svol'len, enn'dle, cat'ile-etc But, even in these eres, it is allowable to break the contact of the organs for a instant, and interpose the voice-glide. When the articulative positions are quite different, the voice glide naturally intervenes in making a separate syllable with the lor

n Thus a sound comes between b and I in a ble, as not in white, a "bless, blow, and between p and I in apple, as not in apply, and between p and I in apple, as not in apply, and between p and I in appearance." k and I in the kle, as not between the same sounds in cloud, acclaim, etc. and in e'ven a sound comos between v and n, as not in everning

Syllables are also made by m with the voice-glide, which in that case is more hearly albed to it (itp) than to it (ev'er), as in schism (siz'm), chasm (kit m), mi'ero-cosm (köz'm), etc

Syllables thus made with m, 1, or m, may be closed by an added consonant, as in strength'ened, hap'nened, chasms, rea/sons, rea/soned, pol/soned, settled, on feetbled

The voice-glide (§ 17) differs from other cases of the neutral vonel by its extreme hrevity only—ordinarily the extrement possible,—und, when followed by n er in is more nearly related to E (evier) than to ony other clear vowel sound in slowly repeating the lane is Western to the control of the lane is well as the lane is the lane in the lane is the lane is the lane in the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the lane is the la repeating the line "Was not spoken of the soul," there are different forms supposible for "spoken." We may dwell on the closing consonant only; but it will sound better to dwell broden it. better to dwell briefly also on the voice glide, and, for the clear vowel to be thus approached (§ 42), &(ov'er) is far preforable to u(up), while t (end) is least of all to be allowed

In this Dictionary, an Arosthorne (1) is used in the respelling for pronunciation to indicate the vowel chann or the voice-gilde, as, par'd'n, a'b'l, etc

§90. (8) The letter e silent As annexed to a consonant at the end of a syllable, yso. (6) The letter estent As annexed to a consonant at the end of a system this letter has no sound of its own, but serves, in accented syllables, to indicate the preceding vowel as long, as in cime, tone; and may be regarded as forming with that vowel a sort of digraph But in some instances the preceding vowel has become short, as in cive. There is the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the short, as in give, hive, bido, done, hypo-crite, etc., is short also in office, promise, ex-amine, etc. It also marks the preceding consonant cor grassoft, as in service, raying. as in service, ray'age, vice, o blige' In the endings ed, en, of past tensy' and particular of some the service. and participle of verbs, the e, except in the solomn style, is for the most part elided, — unless the verb stem ends in d or t, as in add/ed, e-mit/ted, thus requiring the ed to be fully propagate. the -ed to be fully pronounced

\$97 The letter e, with consonont value Like the short I (\$ 105), when o mix § 17 The letter e, with consonont value. Like the short I (§ 106), when a mix-cented is closely followed by another vowel, it naturally takes on, or falls into, independent of a consonant j sound, and the e thus makes, or may make, with the following vowel an impure, or semiconsonantal, diphthong (§ 19 b). In Shakespeare and Milton the words hideous and lineal make but two syllables, and lineal make that two syllables, and lineal make that two syllables, and lineal make in two syllables, and lineal make that two syllables, and lineal make that two syllables, and lineal make that two syllables, and lineal make in two syllables, and lineal make that two syllables, and lineal make in two syllables, and lineal make in the consonant and changes its sound, as in right eous (rifehus; by some pronounced rifyus, rifeht us, etc., § 277), kranf'deur (grand'ur, by some, grand'yff. \$90 (7) Unaccurrent & (before r), —as in ever, reader, lovier, sorier, sorier, sorier al, perform, rover-ent, inference, inference, inference, the constant of the accented & (firm, §5 &5, 14, 16 b). It quality as such is plan in deliberate utberance, though somewhat obscured in rapid speech. The closing element of the en in grandour has this sound, and that of the a in nature, pleasure, etc, takes on the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights; by some, grandour) for the entire the consonant and changes its sound, as in rightfeous (rights) for the entire the consonant and changes its sound, as in rightfeous (rights) for the entire the consonant and changes its sound.

(m)Mh. Demarks the sound of the c has charged the preselt g consumer, it is yellil appear a peculity in a heavest 16 to preselt g consumer, it is yellil appear a peculity in a heavest 16 to prove the a following worst 5 in orecasting (5ab 5aTh) nau as-a'don ( shi b' bhi), she Orthonyt to are now more presently in fac of the allowing the rower to take consument with it all to ear in ne-ons (afth) hith cours (5d 3 ) the coal (4-ah), morfis-a-bid (18-bid) and thin his to \$6 \); for \$0.5 \); 135 "T((graph).

§ 18. This letter has fire variations of sound ( I; I) 1; I; I; I beddes its use with conseant also; and beddes its significance as evolve-gid (§ 2).

with the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of

it or inclines to it; -- see (§ 19 b, 135 Glosely rolated to this is the sound explained below (\$5 91-94); as also the voice-glide (\$ 95) — See \$\$ 105, 124, 135, 145.

\$01. The obefore n in unaccented saliables, - as in pru'dent, sev'en to, rai'. ment, con-ven'ient, cre'dence, de'cen-cy, etc , — takes a sound of obscure quality in rapid speech. In the case here presented, - of the m followed by another consorant, - the question arises whether the sound, when prolonged, becomes the sume as does that of a before r, -see § 42. In such nords as difference, infer-ence, reverent, there is a plain similarity between the vowel of the middle and that of the final syllable, if the words are pronounced as they usually and naturally are by the majority of well-educated people. The n may make the salitishigher than it is before r, but should not change it to & (End), —though, indeed, this form is inculcated by some orthogonats. The e before n in wool'en, kitch' en, etc., takes properly the & (Eud) sound, which in rapid speech tends toward I' (MI); - seo § 83 To allow a sound like & (ond) in de'cent, pen'i-tent, ser' en ty, etc , would bring in a tendency in these cases to let the sound fall to I (III). which certainly should be wolded. Another fault, not less to be avoided, is that of suppressing the our pruident, descent, etc., giving only the voice-glide (\$ \$30, 21 If to be pronounced praidint, etc. In words like com'ment, con's ent,correct with & (end), not & (ev'er), - we have the final syllable netually under h secondary necent

§ 92 Refero 1, the unrecented e 18, in some cases, like that above before n, 48 in nov'el, in'fi-del, while in shriv'el and some others it takes the form et planed below (§ L), — but, in many cases, it is commonly and properly given as & (End), thus in jow'cl, cru'el, cam'el, gos'pël, fun'nël, an'gël, chan' In some of these, and in other words of the kind, there is considerable direr-

sits of usago as between these sounds

§ 93 Authorities differ as to the true character of the obscure unrecented sound of o before 11, 1, r (65 90-92), or hesitato to decide upon it Mr Ellis (Karly English Pronunciation, pp 1161-1163, and Pronunciation for Singers, p 189), prefers need decidedly like equivalent for C (form) obscured, rather than S (find), in industrial cent, pru'dence, eto, — the same which he gives for the c before r, as in read'-cr, rob'hen, ev'er, etc. The New English Dictionary, by Dr. Murray, gives the our mo'ment, sevier al (-er-), as the "obscure" form of o in jet, ten, and man's the o in en tall, and also the o in add'ed, as the "obscure" form of the vored that is "long" in fern, fir, o refli, and "ordinary" in over (er) and in martion (-on) Mr I liss assigns a quito different sound to the oin addred, rarely,

that of 5 (Cnd), or 8 falling into 1 (111) These authorities are thus at variance.

§ 94 In the care of words like prin'dont, nov'el, etc (§§ 91, 93), because 6 the difference of opinion as to what the clear sound of the o before mor a should be when prolonged (§ 42), and to moid misleading such as might not clearly appreher? the sound if a vere employed, the sowel will be indicated by a bare Iralic o in the

pelling for pronunciation

\$ 65 The unrecented rowel of obscure quality before n or 1, as above (\$50.56) is sometimes reduced to the attenuated form called the roce-plide (§ 17), expected not only by an e, but by an 1 or an o vowel letter, — o being most frequently relies after I, —as in entien, henvien, o'pen, shriv'el, a'ble, gen'ile, par'il ele, bu'sin, cons'in, par'ilen, enc'on, etc. In some cases, the articulative penties for the nor like a prochethe section. for the n or l is so nearly the same as it is for the preceding consonant that rescent need como between, and the m or I may serve in place of a vonel for the formational a separate syliabie; as in euten, gold'en, savol'len, can'dle, cat'lle, e But, even in these cases, it is allowable to break the contact of the organs for are instant, and interpose the voice-plaie. When the articulative position are quite diff.

cut, the solec-cilde naturally intervenes in making a separate syllable with the le-Thus a sound comes between h and I in a ble, as not in a bler, a blesh bless, blow, and between p and I in applie, as not in up ply'; and between is and I in tackle, as not between the same sounds in cloud, accimin, en and in even a sound comes between wand it, as not in everning

By lables are also made by m with the role-pilde, which in that erse is made proxity albed to it (hip) than to C (ox Gr); as in schism (six'm), cluster (six'm),

mi'ero-cosm (köz'm), etc.

Fyllabler thus made with m, I, or m, may be closed by an added consonnt, as in strength'ened, hap'poned, chasma, rea'sons, rea'soned, pol'soned,

settled, on technical

To reiengil o (§ 17) differs from off er cares of the neutral rosed by its extra brevity only -- ordinarily the extrement possible; -- and, when followed by it is a last is uncertainty filed to 6 (over) than to any of er clear yours saund. In size is repeating the line "Was not scoren of the soul," there are different forms appearable for "spoken." We may due! on the gooing consonant only, but it will be set to do do line of the soul of the soul only the state of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul of the soul factor to ducit briefly also on the votes of it; and, for the clear word to be tree approach 1 (142), E (ever) is far 1 releable to H (Hp), while E (End) is least the ואמיירביינים

In this Dictionary, an appearance (1) is used in the respelling for premiorisists in indicate the restricts on or the rence file, as, paridin, airl, etc.

FM (2) To letter a silent. As annexed to a consonant at the end of a relative of the first opening of the own. \$100. (4) to 3 as he mide. Selfs to 1 the secretar's short open in the gap way as he have a replicated, and one work is known than and one in the gap house, This is the low-back-ordin-count were)—no passed, that is, is our selection, though, is fact, a columnity prices in it not provided the whole form of the ordered prices, in the columnity to the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of the selection of others retaining the I unchanged and without commental. Feet except the con on

вев § 62. § 120 Unaccented exchanges with & are naturally closed by a consonant, as in con clude', oc-cur', op press', dis'con tent', ree'ol-lect', ro'com mit', falling into the neutral sound in very ripid speech. They are rarely final syllables, tho & (son) sound (§ 124) being commonly given in finel syllables. - See § 39

§ 121 (5) O, o as in do, prove, tomb, ote; with sound the same as 50 (§ 126), and represented by 50 in the respelling for pronunciation.

(6) O, Q as in wolf, wom'an, hos'one, etc., with sound the same as oo (§ 128), and represented by oo in the respelling for pronunciation.

§ 123 (7.) Ö, & as in son, done, other, worm, etc., doubled in flood, blood, etc., — with sound the same as û (ûp., § 141), or before x as û (ûrn, § 139). and, in the respelling for pronunciation, represented by these symbols in accented sylinbles

§ 121 In UNACCENTED SYLLABLES the & occurs frequently; as in ac'tor, at'om, wel'come, fel'on, bish'op, big'ot, etc , with sound either as u (up) or as 3 (ever), or between the two, munly as influenced by the succeeding and somewhat by the preceding consonant. In the respelling for pronunciation, it will appear before r ns v (§ 90), and in most other cases as v (§ 142), but somotimes before n it represents increly a voice-glide, as beelt'on (bik'in), ren'son (re'z'n) —See §§ 29, 95

§ 125 The double letter oo has two sounds, marked oo and oo, besides the oo In door, and in flood, etc (§§ 108, 123).

§ 126, (1) 00, 00 as m moon, food, fool, boot, etc., with equirelents in do, canoe, group, rude, ruo, recruit, rheum, drow, manceuvro, the double letter oo is the special representative of the sound in English.

§ 127. The sound is that of the high back-narrow-round vowel (§ 11), and is made with the lablal opening still more contracted than for o (old, \$108) As ordinarily spoken, especially when joined to a preceding consonant, it is not this absolutely simple element, but begins with a very brief sound of 60, or one intermediate, gliding quickly from this to the narrow position on which it dwells and rests, and which brings it near to a consonant wo sound, - compare § 77 - See Fig 1

§ 128. (2) Oo, oo as in foot, wool, good, crooked, etc. Equivalents are o (wolf) and u (full) It is the wide correspondent of the narrow of (§ 126) Orthorpists do not always agree as to what words shall be marked oo and what oo Thus, in Stormonth's, the Incyclopadic, and Smart's Dictionaries we have hook, soot, and in the Imperial Dictionary of Ogilvic, hook, soot, and Walker limits the "shorter" sound of no to the eight words, wood, wood, good, hood, foot, stood, understood, withstood — There are local diversities as between these sounds—The op sound is heard in Fugland before x, instead of the 60 (100d) common in America, as in poor, sure, etc — See Fig 5

## Ou, Ow, and Oi, Or

§ 129 For the analysis of these two diphthongs, see § 19 Fxamples are out, wit, ote, and oil, hon, ofe. The oil is often mispronounced by gring the initial as it (init) instead of it (usit). Unicerated, or only secondarily accorded, we have

on lo out rn'goous, out-livo', out run', etc

As digraphs, these combinations of letters take several other sounds, as in soup, route, Zouane (war or recent'), soul, coulple, griev'ous, know, billow, knowledge, chum'ois, avoir-du pols', choir, tor'tolse, etc

 $\xi$  120 This letter has six variations of sound, viz.  $\pi$ ,  $\pi$ ;  $\pi$ ,  $\pi$ ;  $\pi$ ;  $\pi$ , —besides its use with consonant value, — and besides the exceptional sound, like I (III), in hus'y, let'tuco, fer'ule

For a na part of a du raph, or trigraph, or diplathong, see \$\xi\$ 44, 51, 57, 70, 76, \$\xi\_2\$, 54, 90, 103, 103, 115, 120, 121, 121, 131, 139, 141-141.

(1) D, a' as in ase, a-base', fa'slon, pare, mate, cabo, tane dily, like, jury, lidan in, infiner ous, etc ; the so-called "long u," having equivilents as in bount, feedal, fend, pow, one, fleu, view, one, sult, vule, yen, you

\$ 132. The general type of the sound is that of a diplithong, which has no (160d) for the terminal and main part, and for the initial a very later and conneceent elettent, which is the high mixed rowel (§ 16) nearly related to I (III) or to I (Ive), and In the greater number of cares there comes in, as a connecting glide, a more sinces' or even qui's displaces, the initial towel element. When Free ded by cer ta'n consonrata, the y gillo has a fendency to be fused with the consonant, thus taking the shape of a sibilant, shi or zh, gilile,—the whole process leading in what is called the process leading in what is called the process leading in what is called the rid is the fleet,—should be accordly particled. Also, in no case whaterer should the y no mil be forced in when it will not come in smoothly as a clide # r 65 174, 17%

first There is a hy-rean lay, act only on the final element 650, but in some first There is a hy-rean lay, act only on the final element 650, but in some degree on the initial consent, bosoning gradually element if he way through The bosoning that element bears a close restriction to the Fr neli 11 and the German is the bosoning and the Franch is and the first with a Franch is and and with 650 (fixed), taking also the interrenting of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the alld's we have the exact annul in the werd after. This inhillization of the entire hat mg is a pract of important at to lookers in toled. It on see, in lood, naturally

with h. p. ra, w. aris boards, infire, white view § 134. At the lacking of a sylladie, ne in flar, Write, etc., the (labalized) indial completences it marks d'oplice I by the (likemen labialized) while, while A hero

§ 119 For a certain faulty promucciation of this rowol, changing it to a (ask), | with difficulty, and need not be attempted, as in suit, as sunce, lute, jury, there, en thus, asm, and after t or il, the it may better be given without the y, as in tune, tutor, due, dulce, duty In all these cases of y omited, the untial rouel element is retained it would be quite wrong to give an ordinary of (food) for the entire sound in such words The y, if attempted after t or d, is apt to degenerate into a sibilant, and produce, with the consenent, a decided tsh or dzh sound, thus making time the same as Jew It is better not to allow more promiuence to the sibilant sound after t or il than the slight degree that goes with p, as in puro, e, no in eubo, and oven with f, as in fow. The 3 sound after d or n is common in England, us in duo, now, etc , but not in America. As exceptional, the s m sure, sugfar, and their derivatives, is entirely displaced by the sh doveloped from the 3 sound, and the towol is reduced to a simple oo (food) or oo (foot) sound, -see §§ 136, 137.

> § 135 (2) \$\hat{U}\$, \$\hat{u}\$ representing a modification of the sound of \$\hat{u}\$ (\$\hat{u}\$so; \$ 131), hi imprecented syllables, as in \$\hat{u}\$-nite', grad'a nte, ac'ta-nte, em'a late th.multh-ous, in-dividu, adju-taut, conju gate, su ju eme, in'su lur, lu-cid'i ty, iu di-'so lu ble, uni'u-u blo, un'the, un'thre, verdur, cent'sure, sent'sural, is suraling, mens'ure, otc. The sound differs from that of it (§ 152) by taking for the flual element the wide of (1601) instead of the narrooo (food), and, efter t, by a partial or entire change of the v into a more or less clear Bh, and neurlly after d into a zh glide; as in ma'ture, vor'dure, etc. A preceding s, in a syllable not initial (as in cen'stire, sen'sti al, etc), takes more commonly nu sli round, and a z or an a sonaut (as in azinre, solizare, lei'sare, ens'th-nl, etc) takes n zli sound, and the vowel becomes nearly, if not quite, the same in sound as u ([o]/fill, § 135). But the preceding s roundns unchanged in faith, and sometimes also in medial syllables, as in su-promes, com/sh lar, in/sh-lar, etc. After j or l in the same syllable, the vowel has nearly or exactly the come of the large the sound of u (joy/ful); as in ju dl/clal, ml/ju-tunt, 1u tid'-1y, in dis'so lu hle, etc.,—see § 133 Before r, in rupid speech, the sound eiten inclinet towards T (ov/Tr), usin mu'ture, com'suo, etc.,—see § 90

> Note - The original sound of the letter 11, as in the Latin, - and 19 still retained in the Italian, Spanish, and Gorman, — was the simple sound of oo (food) or oo (foot) In the time of Chancer, the promunciation of this letter in the English, which was then substantially, if not absolutely, the same as in the French, -may even then have fluctuated between the perfectly simple sound now heard in the French and a sound more or less decidedly diphthongal; as it oppours to have done in Fugland, for the leading sound of the letter, down through the seventeenth ord far into the eighteenth century. The 3 sound made its way into the diphthong and gained prominence in it by degrees, while the diphthong Itself gradually guised a more full development, with greater weight and a tongue position farther back given to the terminal element

> \$ 136 (3) U, u only after r, as in ruido, ruimor, unital. The sound does not differ essentially from that of So (1501), \$ 126). It may, however, with propriety take a brief initial in SO (1504), or nearly this, somewhat more prominently than does the So after other consenants (\$ 127). The sound occurs after 8, as exceptional, in surpound its definition than bearing a sound occurs after 6, as ex ceptional, in suro and its derivatives, the s heard as sin (§ 134)

§ 137 (4) II, u as in bull, full, put, push, pull, otc., with sound the came as 60 (foot, § 128), hered also m suffer a as all (§ 131) § 133 Unicontro the u occurs in the spinble full ras in joy/ful, joy/ful

ness, ful fill', etc., also, after x, in fru-gal'l ty and a few other nords (see 39). The fi siter s with an six sound, and after s or z with a zix sound, is reduced nearly or quite to the equivalent of this slarple element, no in containe, senten niength al, notine, etc., and also after a with its proper sound, and after I and I as in ship promes, contain lar, 10-child th, and in tant, etc.— See § 125

(5) Û, û es la ûrn, ûrge, bûrn, hûrl, etc., with equivalents as m worm, journal, cie, before realy The sound, as more commonly heard, is the narrow form of the mid back mixed towel (\$ 16), corresponding to the wide at (in) § 141) But the pronunciation varies considerably,—then conet taking concitines an extreme low back position like that in air or work, as these words are very commonly spoken by the Iriali, but often taking the mid front position of S (Grin). The

monly spoken by the Irish, but often taking the mid front position of \$(\$\text{Grm}\$) \text{ The variation is both in different words and in the same words as from different persons. See \$57, and the reference to the dictionaries of Stormeath and Ogitic in \$63 \\
\$140 \text{ The vowels of the mixed kind (\$ 16) are closely allied to the consensul r, -those of the back position, \$(\$\text{in})\$, \$\text{in}\$), \$\text{in}\$ (\$\text{in}"), to the r may the back position at the front, \$\text{in}\$ (\$\text{in}"), \$\text{in}\$ (\$\text{or}"), to an r further forward. The curvature of the tengne, in their formation, as similar to that for r, is the ground of this relation. These vowels glide on to the r in such a way that the point of transition from vowel to consonant is not closely all identifies the such as whether the restriction from vowel to consonant is not closely all identifies the such as whether the restriction from vowel to consonant is not closely all identifies the such as a constant to the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction from the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction of the restriction to consonant is not clearly discernible,—or, when the r loses all consonant quality, is absolutely indiscernible See §§ 250-252.

\$141. (A) Ŭ, ŭ as in ŭp, biid, tüb, ñs, ŭsh'or, ñn'der, eto , the "shori u," with equivalents as in son, does, blood, touch, etc. The road is the mid back mised-wide (§ 16) in our scheme, it is placed manag the mixed by Mr Ellis, though randed not as a mixed but us n back rowel by Mr Bell —See § 24

\$ 142. In pracery or art incer the rowel eccure in erredge, said nitt, vol. the ry, elicitm stance, otc., and falls readily into the "neutral road" The ou in lilous, etc., of in por poise, co in dun't con, etc., usually the out in bellious, etc., and the final element of the con in right'onus, etc., and etc. ion in gra'clous, etc. and the o in at'om, irlesome, un'tion, etc (§ 124). have essentially the same sound

(1) U silent as part of the silent digraph no in plague, rogno-tongue, rat'n-logue, nu tique', (to, and of others inguinge, guard, guess, co-quotte', guide, build, pla'gue, etc. Sea references in § 130

§ 163. One form of abruptness is produced as initial, by forcing a passage through etween the worst cords preced tightly and resistingly together the striking the ly ... asterminal, by booki g the tone shrupily through the re haction is railed the "catch I the glottia," or the check of the tone bruptly .... \* a check of the riot process. I haviou as raises the "catch I the glottle," or the close's of the glot in the fine more propelly describ g the extice as initial; and the latter as leculinal. The abrupt sex may may in an easy; and in the lowest degree will be barely preceptable as such as all. The mat'r here set forth is important for the harmtenization of the surd matter, p. £ h (§ 180, 139).

" TE -A vowel, by Itself, may be utt md with obsuptaces of this kind or as A rea-A worsh by Radii, rany he uit red will shruptone of this had on an Italian may in 1 with o concentral precision; an arranda with none these a precise distillage line between the shrupt and the great al, o between what Mr. A J Ellic chin is between the shrupt and the great al, o between what Mr. A J Ellic chin is between the other ones will of the own he of the owner. I English precise the state of the desired of the owner, I English precise the state of the control of the owner, I English precise the state of the owner, and still more in the Danish, it appears as a characteristic of the precise greater of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the owner of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of

\$16L Another form of emphasis initial or terminal, occurs when the breath part I n in sound, or any other breath sound precedes or follows. In the case of it initial as in the c lumation ha, a mone time is given to the breath organs and th breath current, while the ocal cords are the part, and the they are struck

a Aspertable d of implection and excited by Dr. C. M. Mirk 1 and by an proved there's gifth inspect to permutating h. 4. and c. in German in pertain cases.

forcibly and suddealy the instant they are brought together for tone vibration, while in the case of terminal h, as in all, the tone ceases abruptly the instant the cords are reloxed and separated for the passage of the tonciess breeth; - see § 181 For the surd fricatives, f, s, sh, th (§ 198), the effect is similar, with the only difference that arises from the less force employed, — as in foc, sec, show, thin, off, ass, ash, bath, otc., as such syllables are commonly uttered

§ 165 (7) CLICKING This is altogether different from breath sound and from larynged tene The sound is produced by the sudden ead forcible impact of one surface upon another, or hy the sudden and forcible separation of two adherent Sounds, we know, cau be produced in such ways by the hands, and in some such ways, which are familiar to everybody, by the hips, and by the tongue within the mouth Action of this general description actually bours a not unimportant port in the artical tion of the unite consenants (§§ 186, 187), and, or such, comes under the same general category with the so-called "clicks," which form a striking feature in the languages of soms uncivilized peoples

(8) TRILL This, in speech, consists in a series of rapidly recurring purtial, or perhaps sometimes entire, interruptions of a prolonged sound, as the effect of a current of breath, somant or toncless, driving some one of the organs away from a position of contact or of proximity with another, to which it constantly returns by elastic or muscular force; -as in the cass of the trilled r Such action is possible, not only with the tougue, but with the hips, with the uvula, with the epiglottis, and with the vocal cords The general process is essentially the same as that by which tone is itself produced a trill sufficiently rapid would be heard as an untrilled and smooth tone.

Note - A trill, in music, differs from a trill of the kind above described, by alternating between two tones of slightly differing degrees in pitch, -and, in singing, is effected, of course, by action of the vocal cords.

### HI THE MORE GENERAL CLASSES OF THE CONSONANTS

The consonants may be classified in a general way under the following heads, as

thoy are elso exhibited in the Table subjoined (§ 179) § 167 (1.) ORAL and NASAL For the oral consonants, the passage from the larynx through the nose is, or at least chould be, entirely cut off, by having the soft palato closed upon the wall of the pharynx, es a valve, - thus leaving open the prasago through or into the mouth For the masal consonants, m, n, ng, the presage through the nose is open, by depression of the soft palate, tims allowing the stream of vocalized breath to pass, while the way through the mouth is cut off

§ 168 The masal consonants are made by breath sound in whispering, but in

speaking aloud are not normally so made in any case

While the oral consequents form a quite general class, the masal consequents, as a special class, will have further consideration bereafter (§ 207) § 160 (2) SONANT and SURD The consequents that are made with obstructed

tone, as before described (§ 155), are, because of their tone quality, distinguished as "sonnut," - the same toria being applied to the vowels, made all with pure tone The consonants that are made with breath sound only (§ 163) and those made by muto netion (§ 166) are denominated "surd," because of the absence of tone. The sonant elements are otherwise called roiced, or vocal, or intonated, or phthongal The surds are otherwise styled nonsonal, noncocl, valceless, unanionoted, toncless, and sometimes, less properly, unispered The surds ore sometimes distinguished as there, or, in the case of p, t, 1, es hard, end the cognets senents, as neal, or flot, or soft The substitute for tone, employed in whispered speech for the sonants, was described above (§ 154)

§ 170 All of the sonant consonants have corresponding, or cognate, surds, except r, 1, m, n, ng, w, y, as shown in the Table below - See §§ 179, 215, 214

§ 171 The difference between sonant elements and breath sounds is not the difference between tone and noise The breeth sounds are indeed noise, or such in large part, but it is noise of a special kind Some of the somants, and indeed any of them at some times, may have a large edmixture of noise, yet without, or apart from, any element of breath sound

The rule that a surd consonant is followed, in the same syllable, by only a surd, and a sonant by only a sonant, — as in Whipped (hwipt), robbed (röbd), locked (lökt), egged (egd), lashed (lisht), lodged (löjd), hissed (hist), advised' (vizd'), whips (hwips), babes (bubz), laugus (lais), lives (livz, v., or livz, n. pl.), chintz (chints), apse, adz, etc — holds in most cases, but does not holdfor the senants I, r, m, n, ng, w, and y, as in help, art, curse, hence, else, smile, smite, ply, try, fly, ink, quill, cue, -with bulb, hard, Mars else, smilo, smite, ply, try, ily, ink, quill, cue, — with buill, hard, Mars (cz), etc, — except in the case of verband no ni infections, as in Ichia (kilz), killed (kild), curs (kūrz), hens (būrz), etc. Wo have an exception also io the dth of width and breadth. Compress loo lymph, strength, and see § 215 § 173. It is not difficult to utter the surds, — that is, the mere breath sounds, — corresponding to the sounds, I, r, m, n, nrs, w, and y, but, except in whispering, such sounds form no part of the Fighsh language, as ordinarily and properly apoken.

§ 174 The preceding statement is subject to the qualification that the surd form of 1, r, m, n, v, or, my allowably occur as a glide (§ 162), especially after a continuous surd, as in flow, sly, free, smith, snow, swilm, furno (§ 132), and, indeed, sometimes after a mute, as in play, try, twine, etc. But this is merely a transitional sound, through v luch the sonant form of the same is quickly reached The sh sound heard, whether properly or improperly, in tube, etc (§ 134), is evolved, as a glide, out of the surd form of y, — see § 187 Were the y glide to lose sonant quality throughout, we thould have, for tube, a quite improper pronunciat on like tehoob.

§ 175 By some authorities, and particularly by Dr James Rush and others after him,—though by one or two at a much earlier date,—the term a pirate has been exist as an equivalent for surd as here employed, aspiration being taken to signify breath sound surply The term was originally employed to distinguish the third rariety of the mutes in Sanakrit and Greek, remely, p, t, k, as followed by n rough breathing, of h sound (p+h, t+h, k+h). As these sounds were finally replaced in the Greek and Latin is the mere breath sounds, like f, the as in this, and che as in the German, the term "aspirate," or "aspirated mute," was carried on and apiled to these. But, askie from this, the term "aspirate," by most grammarians and reset phoneticians, a applied exclusively to the rough breathing or the h sound.

The scrant consecunts were denormated by Dr. Push "subtonics;" for which

term, by others, "subro-al" has sometimes been substituted.

§ 176 (3.) MOMENTARY end CONTINUOUS The mute consonants, whether surd, p, t, k, or seaent, b, d, herd g, we necessarily brief in duretion they can not, like the continuants, be sustained as long as the breath will held out. The same is the case with the corepound consonants, ch, j, etc, of which the mates, t, d, ferm a part,—see §§ 210, 211. The 11 sound has (§ 181),—as have also its compounds (§§ 212, 214),—essentially an abrupt character, which briegs it properly among the momentary

All the sonant clowents outside of the mutes, and all the breath-sound consonants except the in, are continuous, being limited only by the duration of the breath in e

siaglo expiratiou

§ 177 (4) PLACE OF ARTICULATION. The classification of the consenants according to the place of obstruction especially concerned in their formation, is of great importance. The total obstruction may cover much more than the place bert referred to, and meant to be designeted as the Place of Articulation Thus, for t, d, 11, and 1, the whole length of the tongue is involved, from the root to the tip, but it is the point, or extreme front part, that is especially concerned in the effect. In the case of I, the whole of the tougue is also involved, the centret being made at the tip, and the margin about the front, while at is the sides of the tongue back of this thet ere more directly concerned in the production of the sound, and this part 18, therefore, to be taken as the place of articulation

§ 178 LABIALS, DLNTALS, PALATALS, GUTTURALS, etc. With the place of articulation at the lips, we have the labial consonants p, b, m, w; though the w involves obstructive netion between the back tengue and the soft palate, as well as at the lips The f and v, though sometimes made by the lips alone, yet belog commonly made with the upper teeth against the lower lip, are properly described as lable deatals The proper articulating position for t, d, 11, 5, 7, and one variety of r, 1a the Eaglish, is taken with the point of the tengue on the hard palete, commonly not far from the front teeth, though sometimes actually on the teeth, or again, the part of These consothe tougue back of the point may be employed, instead of the point nants are classed together under the mane of dentals. The th, surd (as in thin) and seaent (as in thin),—made between the point of the tongue and the teeth, may be designated as lingua dental, though, whose the teeth are wanting, the second may be well produced between the teague below and the gums and ilp abova, it is, however, commonly ranked among the deatels. The piece of articulation for sh, zh, and the compounds ch and j, and for one variety of r, is on the upper surface or the point of the tongue and the bock part of the hard palate, and they are therefore called palatols Also, 3, and oven 1, may be classed with them under the same name, the place of articulation for these includes a part of the soft palate us well as of the hard palate The gutturels are k, g bord, and ng, the place being on the solt palete and the back part of the tongue. The nasals, m, n, ng, mey be discriminated ns labio-nasal, lingua-nasol or dento-nasol, and guituro nosal.

All these are sometunes arranged in three classes, namely gutturals, and labrais, as above, with an intermediate class under the name of linguals and semotimes with

the designation paletel substituted for guttural

## § 179 TABLE OF CONSONANT ELEMENTS IN ENGLISH

|                                                                                  |           | NASAL  |                   |                        |        |

§ 180 Supplement to the Table For this sake of simplicity, none of the compound, or diphthongal, consonants, except oh and j, ars included in the Table which might have a place in it will be described hereafter (§§ 212-218) Othera

There are some who would insist on a place in the Teble for a surd (wh) corresponding to the sonant w, and for a special surd corresponding to 3; — see § 183

### IV. SPECIAL CLASSES OF THE CONSONANTS

§ 181 THE IL SOUND The consonantly stands by itself as an element sui general It differs in meny respects from the other breath sounds—It has no fixed place of articulation, except that the glottis always has a share in its formation. Its articula the position is various, being always very near to that of the rowel with which it is joined, and differing from it only in being somewhat wider. It differs, too, from other breath sounds in being made with a wider opening and the emission of a greater volume of breath, and in being made with some friction all along the oral passage But what distinguishes it most of all is its abrupt character, which requires it to ba-classed as one of the momentary elements. It has been usual to describe if as continuous, but if, say la the syllable ha, we lengthen out the has a breath sound, wostill have to give a new impulse before ne strike the vowel, and such prolongation is not normally employed. The chrupt gilds to or from the vowel, as in Inc. or 1th, is really the essential thing—the breath may be expelled with so little friction as to be quite insudible, and jet the is be perfectly recognized by the abrupt offect in the vowel — See § 175
§ 182. The articulative procedure for this element is a movement · — at the outset,

vocal cords are widely apart, and the position of the organs in the movement — at the dutes of h initial, as in ha, ho, hay, he, the glottis is wide open, that is, the vocal cords are widely apart, and the position of the organs in the mouth is more open than that required for the following vowel; at the end of the movement, the vocal cords come close together for tone, and at the same instant the organs fall into position for the vowel. In the case of a final h, as in ah, oh, if the in is actually sounded the former of the vowel.

sounded, the foregoing process is reversed - See § 164

§ 163 The Is sound is capable of preceding or succeeding any voiced consonant, sough in such case liable to run into the voiceless form of the consonant. In the

ancient Greek, as is e cough branching. It often proceeded r as well as the worst. In the Webb issuing these attempts of 1, and makes also that It hand these forests and and the worst. hand, smite, snow, etc The quality belongs more fully to 1 and r than to m and 11, the former heing so employed in a greater number of eases than the latter

§ 207 NASAL CONSONANTS The general mode of fermotion for these has been already described (§ 167) The sound consists of tone from the larynx modified moinly by resonance and partly by friction For m and n (\$\\$ 242, 243), communication with the oral passage is open, but exit by that channel is cut off by closure of the lips, and by closure of the tongue against the hard palate We thus hovo resonance in on oral chamber and in the nasal passage at the some time, and together with some friction in the letter For ng (§ 246), only the pharynx and the masal passage ore concerned, the seit pulate closing down upon the back tongue so as to cut off the orei cavity forward of this point. Friction may be mercased by the muscular action of the nestrals, and of the lips and checks as connected with them Too much friction will produce a disagreeable nusal twang

Tho mg cau not in English begin a syllable An n or m, - but not an mg, may be preceded by a sharp at the beginning of a syllable, as in snow, smile, etc., an ii, but not an in or iig, may take the a sound after it at the close of a syllable, as in house, dance, wince, etc., all three may take a z sound after

them, as in hams, comes, wins, tons, hangs, wings, etc

During the glide (§ 16f) from a masal consonant to a vowel, as in my, no, etc. or to an s or z as above, the previously depressed soft palato will he in movement toward contact with the pharyngeal wall, and not yet actually in contact with it, while at the same time the hips, or the tougue and palate, are changing from their positions of contact The glide sets in at the beginning of these movements, thus somewhat of the quality of the masal consonant will be corried on late the fellowing clement. A similar effect will ensue in the glide from a vowel or an s to a nasal consonant, as in an, am, snow, etc In the ease of a vowel between two nosal consonants, as in man, name, etc , there will be a twofold effect of the kind But, in this as in all cases, the meal quality, in well spoken English, will be limited to the briof glidling portions of the vowel - Sec § 161

§ 208 For the way in which the masals are joined to a preceding explosive consonant, as in ent'en, o'pen, Whit'ney, Step'ney, hack'ney, hack'man, etc, see above (§§ 95, 158, 191), and for the peculiar form which they take in the compound consounts mp, nt, nk, otc, as in jump, scut, ink, etc, see below

(\$215) Fer 11 or m as filling the place of 1 towel, see § 95 § 209 COMPOUND, or DIPHTHIONGAL, CONSONANT COMPOUND, or DIPHTHONGAL, CONSONANTS Certain consonant sounds are composed of more simple consonant elements so blended that the product is properly described as diphthongal Only two of this kind were presented in the Table given above (§ 179) These and others will here be explained

§ 210 (1) Tho ch, or tsh, as la church, watch, has for the initial element what is essentially a t, though a t mode somewhat further back on the tengue then an ordinary t, —or rather, the contact, while inclusive of the point, covers a part of the tongue hack of the point. With this is combined an alrupt sh sound, made by a position somewhat further forward and more open then on ordinary sh, and replacing the pull of simple breath that is characteristic of t (§ 186) It is to be noted, howover, that, when opening upon a vowel in the same sylloble, this sli sound wholly precedes the vowel, and is not, lil o the explosive hreath of a simple t, simultaneous with the beginning of the vowel sound (§ 186) While she by itself is a continuous consount, the compound (tsh) is to be classed as momentary (§ 176)

The ch sound is followed in the same syllable by no consonant sound except only

by t, as in watched (wellt), etc — See §§ 172, 229

In most cases the ch sound has been developed from an original Anglo-Saxon or Latin ic sound, as in church, chin, hatch, charity, etc. It is also made by the fusion of a t with a following 3 sound, as in quosifon, righteous, pfeture, nature, etc.—See §§ 97, 106, 134, 135, 187, 203

(2) The j, or dg, or g soft, -as in jar, edge, judge, goin, pounded of a d and a zh (the z in azure) sound, with the same conditions and qualifications as those above stated for ch It is throughout the sonant correlative,

or cognate, of the surd ch

§ 212 (3) Concerning the win as in when, what, why, etc., there has been a difference of opinion, especially as between American and English authorities, the former contending for an h sound preceding a proper w, while Messrs Bell, Ellis, Sweet, and others insist that the wh represents simply the surd correlative of the ordinary sonant w Either way, and at all events, one thing is clear the sound is abrupt and momentary (§ 176), instead of being continuous like the sonant w

As a matter of fact, this wil, by the greater part of even the well educated peopls in England, is actually spoken precisely like vy, the word when not differing at all from won Nov, the customary wef the English language begins with a brief sound of oo (foot), - this is the main part of the difference between an Inglish and a German w A proper h sound prefixed to this produces the sound represented by wh in whon, etc., as commonly heard in America, and as pronounced by some, cessive one to the other, — such as we have in play, sky, hold, harm, gle if not by most, of the well educated people in England, when they speak in what strive, east, eanst, etc., all which are double, or triple, but not diphthongal

they themselves regard as the correct way The word wen, with an It sound prefixed, gives us when The word who, with the wovel struck very lightly and followed by a long i, makes the word why

It is, indeed, not difficult to utter the surd, or nonvocal, correlative of the senart w, and to pronounce the word when with such a sound prefixed to the vorel. This will give to the vowel the same abrupt beginning it has in hen In this way, the vocality comes in not till the vowel is struck. The other theory brings in the vocality, or souant quality, before the vowel is reached. This is the essential point of difference between the two conflicting views

§ 213 The key sound in quite, quality, ote , and the try in twine, etc , are compound and mementary sounds, analogous to the will as above, the case is the same even with the gry sound hi guano

Norr All the instances here adduced were referred to, in a previous paragraph (19b), as containing an impure vewel diphthong made by the w sound as a connecting girdo This view may be taken with some advantage Yet, since the preceding mute, t or k, as in twine, quite, or the aspirate h, as in when, can not be proleaged, as cau the s m swlm, but combines with the w in on abrupt momentary sound, it is more exact to treat the ve in these cases as part of a compound consonant.

§ 214 (f) In regard to the initial sound in hue, humid, huge, etc, there is the same difference of opinion as in the case above noted of the wh some regarding it as the surd correlative of the senent y, and others, as un h sound preceding the

3 part of the vowel

The consonant 3 always begins with a brief vowel sound (§§ 205, 272), - which, in the y part of the rowel ii (fise), is the high-mixed (§ 16 b) rowel element nearly related to I (III) An Is sound preceding and combined with this y makes the com pound and momentary consonant which, in Time, etc., is followed by the vowel of (food) or oo (foot)

What would otherwise be regarded as part of the impure diphthong \$\tilde{u}\$ (fisc, \$ 19 b) Is here viewed as detached from the rowel and combined with the preceding In in a compound consonant, just as was done in the case of wh (§ 212), as explained in

the Noto after § 213

§ 265 (5) The up in jump, presumption, etc, with the mpt in exempt, etc, the nt m sent, the nd in hand, etc, the nk in ink, etc, the ng in singete, and the nich in benich, inch, linch, ete, are peculiar compounds. In the mp in jump, ete, the masality sets in, — by depression of the soft palate,

while the lips are approaching for closure, and continues till they close, and thus gives the Impression of an in The lip closure is abrupt and foreible, and made with the percussive, occlusive, and implosive oction before described (\$ 180), and thus gives the effect of a p, oven without the help of the breath explosion (\$ 191), which will ordinarily be added at the close. In a word like exempt, we have the first part of a p, given as above described, and the last part of a t, thus the total combustions and relief to the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the closely of the close tion mpt will not be simply m followed by f These compounds are momentary consonant sounds, while m by itself is n continuous consonant, and may actually be prolonged for emphosis,—as, for instance, in lame,—this cannot properly be dono with the m in lamp, jump, etc. The m, m such cases, represents merely the glide (§ 161) from the vowel to the position for an m

§ 216 The compounds nt in sent, etc , and nik in inic, etc , are to be explained In a similar manner So also is the nch (ntsh, § 210), in hench, etc Somewhat of a similar choracter appertains to the 11d in liand, etc., also to the nig at the end of a word, as in sing, etc. (§ 246) The pronunciation of bench, fuelt, etc., ls not properly represented to the woy in which it is done by Walker and others, ha

bensli, insli, etc

\$2f7 (6) In x (ks), as in box, etc., an abrupt s sound trenches upon the simple breath explosion of the surd mute k., and the compound is momentary. The same is to be said of ps and ts, as in cups, its, etc., and of nx m anxious, etc in mps, nts (jumps, cents), the s is in the same wey combined with the compounds exploined above

§ 218 There is a difference between conts and sense, although in the abrupt transition from the m to the breeth sound of the s, it is not easy to avoid entirely an explosive sound like the vanish of a t. But in cents the t is distinctly given, while the n is more fully brought out in sense, and the s is not so abrupt Also, hand-

some may be made to differ slightly from hansom

§ 2f9 DOUBLE CONSONANTS All of the diphthengal consonants, as above, have two or more components closely blended, of which one, as a separate element, would be momentary, and at least one other would be continuous, and the compound product becomes a momentary sound. The case thus differs from that of n mere junction of two or more consenants under one stress impulse, as simply successive one to the other, - such as no hove in play, sky, hold, harm, glow,

# THE CONSONANTS OF THE ALPHABET (WITH THE CONSONANT. DIGRAPHS) IN DETAIL.

§ 220 This is a label somet mute (§§ 178, 195), as in boy, cab, elib, rollber, beauty, bring, blow, able, lierb, bulb, xhomb, robbed (rold), role, ft is usually silent after m in the same syllable, as in bomb, cun'bearier, etc climb, tomb, also before t, as in debt, doubt, sub'ile, olse m bdel'lium the for b in Spanish, see § 220, p ixxxviii

O' this letter there are two kinds of sound -

O' it is fetter there are two kinds of sound —

(a) One like a sharp (§ 225), marked C, C, and represented by a in the respelling for profundation, this sound is taken before c, f, or y, as in code, of a fl, c) press, acid, glance, force, alec, ctr — (b) In a few words the letter has the z sound, as in sacrifice, suffice, discern — (c) When cc or ct is followed by another results to the community of the same with the characteristic to the active the color of the community of the community of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of the color of th rowel in the same stillable, the she sound is taken, either by the e alone, - as in towed in the same stander, the sum is taken, ensured by the council by the council by the council by the council together,—as in occasi, victority—or by the council together,—as in occasi, victority for the sound is otherwise represented by the instant, question, Christian, 186, 231. [Proposition of the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the council by the c

represented by Ic in the respelling This sound is taken before a, o, or u, or a con sonant, and at the end of a syllable if net followed by 1 or e, as in call, cave, cold, ple'ture, act, cthies, ac'rld, cry, clay, arc, tale, sane'tlon, dise, nlmnne, sean, uc'cord, unc'gi-mate, and before e in sceptic, and before in scirrons, etc — See § 232

NG.

\$246 This digraph represents a simple cound, namely, that of the gutturenasal eonsonant, which is made, like the surd it and the oral conant hard g, by contact hetveen the soit palate and the hack tongue, hut, unlike them, with a free passage hetween the soft palato and the pharyngcal wall, - ace \$\$167, 207. It occurs only at the end of syllables, as in long, wing, hang, sing, song'stress or with no added at the end, as in tongue An added inflection causes no change, as in sing'or, wing'ed, etc., except that in the comparatives and superlatives of long, young, etc , the g goes with a proper hard g sound to the inflection, while the n takes to itself the ng sound; as, lon'gor, lon'gest.

The ng at the end of a word is reelly diphthongal and momentary, as in long, etc (§216), the sound is thus abrupt, and does not name of prolongation, it etops suddenly with the orgens in position for a nonnasal hard g sound But when another syllable is added, it does not take this abrupt character, and can be prolonged for em-

phasis or any other purpose , as in lon'ger, fin'gor, sin'gio, etc It is a common fault in some quarters, and on the part of some people, to give the n instead of the ng sound, in the inflection of the present participle, ns, iivin', bringin', instead of living, bringing In words like sicken, quickon, the n sound preceded by k, if the ng sound be substituted for the n, the mispronunciation will ordinarily fail to be noticed by even the most carcial observers.

§247 This is the labial surd mate (§ 185), as in pen, pay, cup, enpo, pray play, harp, help, spy, spread, oppress, upper, happy, otc It is silent as initial before n, s, sh, and t, as m pnenmatics, psaim, pshaw, ptarmigan, also in raspberry, receipt, sempstress, accompt, corps, and their deriva-tives. For the diphthougal mp in lamp, etc., mpt and mpts in tempt, tempts, etc., see §§ 215, 217

#### PH.

§ 248 This digraph occurs chiefly in words of Greek derivation, and has usually the sound of f, as in phantom, sylph, philosophy, ctc It has the cound of v in Stephen; and, according to most orthospists, in nophow, though in America it has commonly its regular sound of f in the latter word In diphthong, triphthong, ophthalmy, naphthn, and other allied words, and their derivatives, the ph is sometimes sounded as p

§ 249. Q is in all cases followed by u, and the two together bave commonly the sound of Evy (§ 213), as in queen, conquest, etc., but have that of Ic m a for words from the French, as in coquetto, etc., as has also the ending que in an tique, burlesque, o'c.

#### R.

§ 250 The r, when pronounced as an actual consonant, is a sonant fricative element, and belongs to the palatal, or else to whet is called the dental, class of consonants (§ 178) Its several varieties all hear a close relation to vowels of the consonants (§ 116) Its several variences an ocar a close reaction to vowces of the mixed order (§ 16), namely, ŭ (ŭp), û (ûrn), č (fërn, ovër), and n glide of this kind naturally intervenes between a vewel not of this class and a fellowing r. These roycles are made with an approximately cylindrical passage between tengue and priate taking this positiou, and simply raising the point of the tongue, for frietion of the hreath against the edge, gives by this means the r sound, while raising the point of the tenguo still higher and into centact with the palate gives the position for the nasal n, and for the surd and senant mutes, t and d In the words firm, fern, burn, hurt, bird, etc , we have actually these three positions in succession, in just this order; and, by interposing an B on the way, we get after the vowel the triple consonant ret, as in first, burst.—See § 140

There are two leading varieties of the consonant r to be noticed, - besides also the vowelized x, as a third variety, which is not really a consonant, and besides a substitute that is sometimes used, made by a trill (§ 166) of the uvula, or of the epiglottis Reference will here be had, when not otherwise stated, to the pronunciation of those

who speak the r niways as a consonant.

who spear the r niways as a consonant.

§ 251 (1) The se-called dental (§ 178) r, having the same place of articulation as 8, z, t, d, and n,—that 13, between the point of the tongue and the hard palate net firs back from the front teeth,—is employed before a vowel; as in rise, try, 6rd, arrny It is so used by these who de, and by those whe de not, employ the vowelized r in other elimitions. The dental variety is also favored, rather than the palatal, by conjunction with front vewels (§ 10), and with lahial or dental consoman's (§ 178); as in fear, fern, preach, trace, hring, linrp, hurt, etc. It is usually trilled (§ 166) somewhat, but not strongly so.

The rh in rhetoric, rheum, myrrh, etc., is sounded simply as r

§ 252 (2.) The palatal r, made between the point of the tongue and the palate it a place near the junction of the bard palate with the soft palate, is the r that naturally goes before or after the rowel is (lirm) or any of the back yowels (§ 11), and rang goes before or after the rower is cirrain or any of the back range, range, roun, each felore or after a guttural consonant, as in firm, firm, war, range, roun, each from parts of the United States, the point of the tongue is curled back, in such a way as to bring the r under the class of elements sometimes called "corebrals." The palatal r is less apt to be trilled than the dental r

Norm - When an r comes between a vowel and a consonant, or between two differert youels, one faroring the palatal and the other the dental variety, no general rule can be laid down determining which shall provail, but the one that precedes has tather the advantage over the other.

§ 273. (3.) The vowel like, or vowelized, r, which prevails at present in London and the South of Fingland, is employed in all rituations, except when a vowel zound trumsdistely exceeds a their in the same or in a following word, —in which cases some form of the reseauctions and is given. The vorelized its heard seiter and novel is the mixed order (§ 16), & (forn, ever), fi (firn), if (fir), or as a mers prolongation of the rowel preceding, as in war, far, more, hore, where, causes an abrupt beginning of the n (§ 158).

care, carve, cart, heard, harp, hard, worm, warn, worn, farm, far-

ther, turn, fern, western, etc. In New England, a usage has prevailed, not approved or much used by well educated people, which simply dropped, or chided, the r in the situatione above noted, not giving it representation in sound at all But the x takes generally, in the United States, n more or less clear sound as a consonant in all situations.

NOTE. - According to Mr A. J Ellis, it is permissible, oven in London, to sound the ras a smeoth consonant in all cases in which it commonly takes the vowelized There would, therefore, seem to be no good renson for not doing so, and thereby wolding the multiplication of what are really local, if not provincial, homonyms and the liability to ambiguity and mistake arieing from the factitious similarity m sound of western and Weston, manner and manna, forn and fun; birds, bards, and buds, soro and saw, lore, lower, and law, and the like in other instances Besides this objection, there is the naturally resulting habit of adding a consenant r to words ending in a when the following word begins with a vowel, as Minerva(r) is ., the idea(r) of, etc.

§ 251 In the case of worde in which roccurs between two vowers of which the first is long and accented, such as ho'ro, so'rious, wir'y, de sir'ous, there is a etyle of pronunciation prevalent in England, but not much in vogue in America, which deubles the r, making it smooth or else merely vowclized at the end of the first syllable, and rough and trilled at the beginning of the second, as hc(r)'ro, sc(r)'ri ous, etc In Amorica, it is more frequently used in words formed with an infliction or euffix after the r than in other cases, as in se-cur/(r)ing, poor/(r)er, etc.

§ 255 This letter has four different sounds, all of them eibliant (§ 203), two surd

and two sonant (§§ 169, 179), as followe -

(1) The proper sound of s as a surd elimant (§ 203), is made by breath forced through a contracted channel between the tongue and the hard palate near the front teeth, and impinging upon the edges of the upper or the lower teeth, as in see, so, hiss, yes, scorn, sky, sly, smile, snow, spy, square, stay, swim, cuffs, picks, cups, cuts, scuso, curse, best, message, dispiny, lisp, gipsy, absurd, morsei, absolve, basis, nuisance, practise, falso, etc.
The point of the tongue may be raised to the upper gums, or it may be depressed behind the lower teeth, making the contracted channel not so near the point of the tongue Equivalents are — c coft, as in cell, civii, vice; sc, as in geene, science, etc., sch, as in schism, schedule (as some in England pronounce,

§ 277), ps, as in psalm, psychology, ctc § 277 (2) The sonant s (§§ 199, 202), — marked §, — corresponding to the surd, as above, le made by the same articulative position, except that the tengue is presed as above, le made by the same articulative position, except that the tengue is presed somewhat closer to the palate The sound is precisely like that of z; as in 15, has, ribg, ridog, eggg, iiig, aims, rung, lives, engy, palgy, pangy, damsel, ologervo, pleagant, accuse, position, dismal, disease, hughand, grigly, resolvo, presido, etc. The sis sonant as the final sound of some crist and any as the final sound at the contract of the sis sonant as the final sound of some crists. and surd as the final sounded the cognate nouns or adjectives, as use, abuse, diffuse, rise [n & t often alike sonant], house, etc Notice close, with sez z in verband noun, and s sharp in the adjective Compare advise (v), advice (r.), etc

§ 258 There is a diversity of opinion among ortho-pists as to whether the z or the sharp s sound should be omployed in some of the words formed with the prefix dis- (Walker, eto, lavorng diz-, lato orthoepists, dis-), as disarm, disburge, etc , also in the case of the termination -eso of gentile nouns, as in Chinese,

Japanese, etc § 259 (3) S takes sometimes the sound of \$1 (§ 203), by fusion with a following y sound (§ 272), with consequent vowel change, as in version, mansion, convulsion, censure, sonsual, sure, sugar, etc., in the case of a doubled, the first is assimilated to the second, as in pussion (pxsh'ún), issue ('fsb'h) in a few words a takes the sheard and the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the sheard at the shea few words a takes the sh sound while leaving the following vowel unchanged, as in

Asintic, mausca, etc — See §§ 97, 106, 135, 221 § 260 (4) S takes the cound (zh) of z in azuro (§ 274), by fusion with a following y cound, when it is preceded by a vowel in an accented syllable; as in vigion, declared a syllable; as in vigion, decl'sion, ad-ho'sion, sua'sion, ex plo'sion, con-fu'sion, pions'ure, lef' gure, vig'u al, u'gu ry, etc , also in seig'sion, ab-seig'sion, re seig'sion.

### SH.

This digraph, —as in slinrp, slitne, rish, usher, —represents a surd sibilant (§ 203) made between tongue and palate at a place farther back than the s It is commonly reckened as a simple element. But the description by Brucke seems more necurate, which makes it to be n composite element, consisting of an S sound made at the point or front edge of the tongue and, as simultaneous therewith, a heath country of the tongue and, as simultaneous therewith, a breath sound made farther back, and like the German cli in icli The S part of the articulation must, however, be more open than for an ordinary s. The sh in Ergist takes also more emmonly a sightly diphthongal character, with the s constituent more prominent in the must and the same takes to the constituent more prominent in the must and the same takes to the constituent more prominent in the must and the same takes to the constituent more prominent in the must and the same takes to the constituent more prominent in the must are the constituent. more prominent in the initial and the simple breath senind in the terminal perhotion.

The sound is otherwise represented by c or s with or before c or 1, and by t or st with or before 1 (§§ 97, 106), by 6, sometimes, hefere u (§§ 134, 135, 259); as in welved in the x in anxious, huxury, etc., by ch in chaise, etc., by chs if fuchsia, and by sch in school, schottische, from the German.

**T.** "

§ 262 This is the dental surd mute (5§ 178, 185), as in tio, it, note, try tuno, twine, stay, stray, art, last, npt, sent, aft, act, salt, next, at tend, etc. For the cound of t in different cituations, see Suno Mures, 55 185-194

For it sounded as shin nation, etc., and as ch in question, see \$105.

The sound is represented by ht, ct, th, cht, ght, phth, as in doubt, indict thy me, yield, night, phthisic, etc., also by the verb inflection -ed are suid elements other than t (§§ 96, 229). The tis allant in Nintthow, mortgage handboy, chasten, linston, often, listen, etc., but in chasten, etc., ausses an about homomore of the method.

§ 263. This digraph is used to represent two lingua-d stal fricative sounds (55 I S 1 9 198, 1.9) a surd and a someni; both made with the sam articulati a 

with b eatl o baths father northern, sic \$2.4. And America the

sometimes not foll to that part of the consonant which is on the stronger side, especially in the case of initial syllables, as in lim ag'ine, en-a'ble, up-on', un-on'sy.

A rerupulous discrimination and drowing of the line between weak junction and

loose junction is not in all casos practically necessary

In the creens consecutive nunceented syllables with a consonant between the vowels, it is often almost n matter of indufference, so far as concerns the pronunciation in ordicary speech, whether the consonant sound be regarded as attached more closely or prominently to the preceding or to the following syllable, us in nom'i-inil, def'i-nite, fel'o ny, phan'ta sy, sec'u-lar, ad'ju-tant, wag'on er depends on very slight differences in the distribution of the stress

The SOUND of on alphabetic element will be DETERMINED to n considerable extent by the relation it has to the other ports of the syllable in which it stands and to another syllable adjoining A close junction of two elements tends to bring into promiscince the adjacent parts of each, the end of one and the beginning of the other n loose or a weak juection either reduces these parts to slight prominence or causes an absolute mutilation on one or on both sides of the junction Thus the close junction bett een 1 and p in help brings out strongly enough the initial part of the p, while in GII-pln the loose junction causes the eumo part to drop out, looving only the terminal portion in close junction with the following part of the syllable In at'orn we have the first part of a t brought into prominence, and the last part in a tone'. The vanish of the vowels  $\bar{a}$  (ale),  $\bar{o}$  (51d), and if the diphthong  $\bar{i}$  (1ce), is apt to come out more distinctly in the close junction with a following element, as in tapo, latte, mole, rift, -than in the loose junction, -as in ta-per, -as in tape, inite, inote, fire, - man in the loose junction, -as in taper, liftred, init lar, ri-fic The condition of syllables in loose junction is in some ways an approach to the condition of separate words. The m in loose junction with the preceding I in val-ue, val matten, etc., gives clearly the 3 sound which it has at the beginning of a word, as in use, union, etc , and yet loses the brief initial element that is retained in the close junction of u with 1, in lucid, lute, etc., ace § 131

The ORTHOGRAPHIC DOUBLING of a consenant that males a part of two adjoining syllables is apt to have an effect upon the pronunciation in quite deliberate speech, even when, in the ordinary manner of utterance, no difference will be made from cases in which the consonant is we tten single, ao in ditty, scatter, compared with city, atom. The consenant is therefore in such case repeated in the respelling for

pronunciation.

(B) The NATURE AND KIND OF THE VOWELS which form the core of the syliables composing a word is the leading factor in determining the syliable division of the word It is this on wideh depends the kind of junction n vowel makes with the consonant that immediately follows between it and the vowel of the next following syliable, and it is this which, in so doing, goes for to determine the main questions hat arise corcerning syllabic division made on the basis of pronunciation

LONG YOWLLS Any one of the "regular long" (§ 22) rowels, \(\bar{n}\), \(\bar{v}\), one or more consenants between it end the towel of the next following syliable, one or more consonants between it and the vower of the next following syllable,—makes naturally a loose jurction with the adjoining consonant, as in the per, lintred, fit ther, dra ma, not son, Me-brew, veg-ter, an ther, o men, solar, cove-slip, co bra, the more etc. But this is impossible when we have two or more consonants not capable of beginning the following syllable, as in nor ter, In gel, cam brie, fir-ther, moun tain It is also quite unnatural, if not impossible, in the case of n, 1, nr v, followed by i with n y sound (§ 106), os in il len, gen ius, fin-lon, ful io, cornul hun, behuv ior, cte Again, with st a loss june on is not natural, as in hirsty, Enster, pastry, austral The long rowels an modified and shortened in unaccented spliables (and marked fi, c, f, s, f) alteres make loose junction in the situation in question, as in miscellift my, o, up are to make 1000 junction, political, etc.
fit treat, so ele ty, feid-ny, political, etc.
fitory lowers Ali the "regular short" (§ 23) rowels, 4, 8, 7 5, ü, besides

SHOPT YOW'LS All the little when covened, in the the division come after a fellowing consenant, as, high'it, in bit'in al, prophict, pro-phictic, in the fellowing consenant, as, high'it, in bit'in al, prophict, pro-phictic, in the fellowing consenant, as, high'it, in bit'in al, prophict, pro-phictic, in the fellowing consenant, as, high in the fellowing consenant, as, high in the fellowing consenant, as, high in the fellowing consenant, as, high in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in the fellowing consenant in coldemie, sab'arb, tab'iet, sac'rament, vestige, petirify, jus'per, He'ten, mas'ket, cop'per, etc Also, -except I, u, or oo, and a, as explained below, - they all do the same when we accented, as, ht-tack', &x net', sps'tom-nt'le, mis'e'l la my, con nect', xee'ol lect', sus-tain', sub-orn', etc. But a different division is to be made when the consonant with the following vowel has the sound of sh or wh or j, as raidion al, special, dis-crection, of-ficial, con dilion, vision, re ligion, etc.

Unsecepted vowels which may make force function with a following consonant are the two, I and u, or ou, or the as including the oo cound, - which are the 13 parameters and the extenses of the first and the back series in any parameters are the extenses of the first and the back series in any parameters are the extenses of the first and the back series in any parameters are the extenses of the first and the back series are the extenses of the first and the back series are the extenses of the first and the back series are the extenses of the first and the back series are the extenses of the first and the back series in the back series are the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series of the back series

at'om, a-tono', etc The division, in writing and print, will be determined accord- dis'n-gree', etc, the neutral vowel also, when in rapid speech the others fall into anyly, when the letter in question is not doubled. The prominence does, however, it (§ 17) They all usually make the loose junction when the consenant or consenants the I takes so much stress as to throw the division over to the other side, as in Inng'ine, ilis-ense.' Also, I ottracts and detaches a from o following consocant, as in min'is-tel, con'sis-to'tini, mng'is-trate, etc The obscure e (( 00, 01) and a (§ 69) take with them the following I, m, or n, etc., as in nov'el-14t, nine-ad'am-ize, allen-ate, rav'en-ons, etc. The n, e, i, o, u, are noticed above in the paragraph under the head of Long Vowels

The vowels that are always followed by 1, namely, A (care), & (fern), or I (sir) c (ever), ô (ôrb), and û (ûrn), are always in close junction with that consonati, whether accented or maccented, as in par'ent, ser'vant, sov'or-al, vir'tue,

Gr'dGr, mitr'mur, ctc.
Two or More Consonants together Certain successions of elements can not, in English speech of least, be omployed without intervening remission of stress. When two or more consonants come between vowels, four different cases

1 The consonants may be capable of combining with a following but not with a preceding vowel, and thus of boginning but not of onding a syllable. In this case, if the preceding vowel is of a kind that fovors loose junction, the division will come upon the vowel, as in A'pril, hattred, sa'ered, pre-scribe', Mal'i bran, n-brond', st.-preme', otc If the rowel requires close junction, the division can come only hetween consonants, as in Can'ri-corn, not'ri-fy, m'id'r! gal, minis-ir3, ctc , since it can not come on the following vowel.

The consenants may be copable of combining with a preceding but not with a following vowel, and thus of ending but not of beginning a syllable. The division cannot thus come on the preceding towel, and comes more naturally between consenants, as in ver'dure, sur ren'der, an'gol, en-dure', etc., but, ont of regard to ctymological structure, mm be allowed to come on the following vowel, as

m höld-ing, bulld-er, cte

The consonants may be capable of either beginning or ending a syllable, and thus the division may take now one, and now another, of the three possible positions, as m bō stow, dč-spair, mas-ter, dis pense, rasp-ing, ask ing, has tyhīst-lng, boast-ing

The consonants may not together combine with a vowel so as to be oble either to begin or to end n syllablo, and the division must of necessity come somewhere botneon consonants, as m but-ler, first-ling, con-strain, hol ster, Will-

ming-ton, Cambridge, etc

ETAMOLOGICAL GROUND OF DIVISION The pronunciation of words is often Influenced by a regard to the etymological structure, and thus the syllabic diricon will to n certain extent be determined by ctymology, though based upon pronuncia-tion,—the principles above explained allowing a certain liberty of variation What would othorwise more naturally - when the case is not really one of indifference be a loose junction, may be converted, by on altered distribution of the stress, into one that is close, and labouise the reverse Thus, what would more naturally be mi ker, speaker, kee-ping, visiter, swee-ter, wanting, worker, mel ting, trus ty, hur-per, is roadily and proporly changed to make er, speaker, keep ing, visit-on, swoot er, vignt ing, work-or, molt ing, trist y, harp-or, of a Tims, instead of transmit, transmet, we have transmit, Vowel sound itself will sometimes be modified with reference to the trans-act tymology

Prefixes and suffixes which are such boyond question, and are universally and obviously recognizable, may properly be kept separate and entire. But this ininciple may better be restricted to derivatives in which the spoiling and the pronunciation (with the accentuation) remoin as they were in the original words, as is not the case in hit/sti nance, from his stuint, presti-dent, from pre side, in/ci-dent tal, from in'el-dent, tri um'phant, from tri'umpli, in'el-dent, from prite', cau-a'il'i ty, from cause, proc'ià-mu'tion, from prite', cau-a'il'i ty, from cause, proc'ià-mu'tion, from pri-claim', etc., and further, to those cases in which the meaning of the original is carried fully and plaint into the designation of the original is carried fully and plainly into the derivative, without deviation by specialization or otherwise, as is not the case in trust tee, from trust, even tunl, from event, tren tise, from trent, rospective, from respect, tte. In the cases in which a suffix is preceded by a long round under respect, etc. In the cases in which a suffix is preceded hy a long vowed under merely eccondary strem, the more natural way of promunda tion is followed, in this Dictionary, in disregard of the etymology, as in e-man'ci-pat'tor, or gain t'zer, a-cld'u la'ted, an'te da'ted, while the ctymology is followed in the case of a long vowel, so situated and under a primary accent, as in Luit'er, bup tiz'er, diat'ed, con'tra-a En'ing, etc. See the Rules (§ 276)

Bince the Intent and purpose of written words is to represent speech, there is really no good reason for nilowing etymology to control syllable division, in ordinary writing and print, in any other way than indirectly through its influence on the customary pronunciation. The chief occasion for such division is the break that is often required between lines. There are those in Various and the custom outred between lines. quired between lines There are those, in Fugland more than in this country, who divide necording to ctymology, in deeplte of pronunciation, but the prevailing of tom is to follow the etymological division only so far as it may not absolutely con-

# \$276. RULES FOR THE SYLLABIC DIVISION OF WORDS IN WRITING OR PRINT.

TIP The sim of this set of Rules is to furnish a selficient practical guide for ברל הצרץ ביים

Rule L. The remakes of a compound word will characteriselies English words with services sever to in the cor pound, we represed in syllableation; as, footgiord, mill stone, way faring,

Rule II. Two er more lawers, when they expresses a diffrience followill, ou in atti, end, enden a deput de tippele, edelere enced (al m. A. Lede, en m. E. T. L. H. E. etc., en and the description of the medical plane of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of stills of this alt in asis, and is align, my in singly as in grove case, so in deletion will be reliable, at it with, only ment to be opposited, but one to be it is aligned to conserve the property and this is to bounder at the case of a conserve the conserve and this is to bounder at the case of a configuration of the transfer of the conserve of the case of a configuration of the configuration.

whally or partially represents three letters (\$ 250) — is put together in the place of the first s. - For sic-Lie, ctc., see Rule IX.

Rule III. Two vowels coming together and sounded separately belong to separately syliables, as, n-orth, n-ortholog noted energy recomposition of the epingency and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy and energy

Rule IV. A. Certain consonants are not to Ind u syllable .-

I Good and good, as we here, ra king, enti-sing, eviden sing, intel if ken-see, run her, exe-heie, exi-hene, enti-sing, eviden hims, or a ken-see, run her, exe-heie, exi-hene, enti-sing, delu hing, or a ken-see, that even without another consonant next after a short accept word, or in the demand. As a short accept to the form of the demand of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see of the see vorsi, or in the digraph dissipar repliciti, malific, regiment, precipiet registation, resticity, dilit, logic, jidkment, neknowledking

creed the wintered the stare of a time when it was university considered the model or re-rest epoch. Subsequertly, to established himself as a teacher of elecution la Lewish, thate-d. ar l rations provincial towns in England, ar well as in Scotland and Indian's and browning Lightly distinguished in that capacity, was pritromzed be many of the I notich robil to and gentry. In 1791, Le published the first edition of he "Criscal Pronouncing Preciously and Expender of the Lightly Lenguage." This so se witch embedied the results of much careful observation and longcontin od at my Ci "the analogues of the las mage," became at orce the popular meaned of your relation, in I me through many californ, both in England and Au erlea. And even wore, after the lapse of more than fourscore years since the usur of the last of the four end are revised by Walker himself, though custom has much educated in regard to many mords, and though more recent and very mentorious with a take it a 'i'm. Natica's opinion and authority are too important to jus-tify as a re-charge complete the 'Treedition each at this Synopsis, under the name ef H's con, for a merrer the elicentublished in Lorden lu 1809 under the editorelun not 2'- John Munica, who had being been in in atoly acquainted both with Walker persually and with the eviews, and was recovered for this special work by Walter himself 2 on a detable time is fore the decrees of the latter in 1807

For many years the proportions of Walker's Dictionary held the Poglish market exceedy, at 1 in 1805 from hour i, or der the two of "Walker Remodelled," and atternants "Bullet's Primo name Dictioning of the English Language adapted to the Per sat State of Literature and Science," an excellent and claborate Prothe life and reate of liferious and science," an execution an absorate Pro-trains like Instrumentally II II formed a local as "replained "edition published in their rigs of himself, "I protect to reflect the oral union of Eughels made not it is a greatest along the similar or is reflect extent in the British metropoles, and I can new to east what my opports note shave been of learning that make. I also a Loril now, the era of a Lea love, and have irred varied all my life in London. Mix early elementering for a leave resolution, and a "Practical Grammar of Mary resolution, and a "Practical Grammar of Mary of Proper and with the California of the resolution." Is sell of the during which my after it can have not and on the subject in view. It is a been as I that it season is of presenceations to old be taken not exclusively from the end of the original in the lightest circles now not from these who devote all their the a to learning I have been able to observe the mare of all classes. As a teacher of it. Try, al. language at I hierat tre, I have been educated into some of the first tends a faith kinging, sam a partial to Looks, I i are come much late contact with For high more wells, as a gub", " reader and lectures, I have been obliged to fashion my on the within to the task of the day all syrepared, I may not unwarrant. of the state of a state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the the above eventional to rearrant, figured in India, with a Eupplement, etc., is quoted thirtiments of Smort.

The Presents lay I districtive of Dr. Joseph II. Werester give evidence of languardous land everywhere restriction to the subject of promine atlan. Maquarto are next 2.7%, with its furglement limit in 1822, is here quoted under the name

The Indiana of Rev. James Strumet in our of the three new distinguises out at in the Agreement. I'v figure or h limitell was a Brotchman, and died in 1922, but the groundist, not kind offering has been edited by Rev Pilly Henry Phelp, who was said the degrees of B. A and M. A. or H. Indah C. Cero, Cambridge, Reg., and it leading on and as that af finall, representative of faul sheomerative property. and the transaction and transaction and experience and the management

In the freshing Experient mass elich, sucher the same of Cill, the "Compression to easie in place of the Kanopina bearing Lightly for heavy" of the Optice, of Abstores, Review Lightly for the color delication thus represented

early life ha was an actor, and familiarly acquainted with Garrick and other theatrical | the pronunciation is professedly "adapted to the best modern usage," by Ekand Cull, Esq , of Lordon, one of the contributors to the Penny Cyclopeden and wal known as an enthusiastic and learned phonologist "The best modern usage," havever, is assumed to be that of educated society in the city of London, and the assertion is made that "no system of pronunciation can be regarded as correct unless it be in strict conformity " with this standard. It must be added, that though both Smart and Cull claused to exhibit the most approved London usage, they differed milely and often as to what that usage is. But the above named Dictionary has been surerseded in this Synopsis by another, also bearing Dr. Ogilvle's name, but not all. Cull's, "The Imperial Dictionary of the English Language," lasted in 1883, 35 "carefully revised and greatly augmented." under the editoralip of Charles Annondele, M A , LL D , Dr. Ogilvie having died in 1867.

"The Lacyclopedic Dictionary," edited by Rev. Robert Hunter, M. A., Id. D. and issued in fourteen parts, 1879-1888, is the most recent dictionary which is calciin this Synopels, and the most copious in its list of words. The Prefect, in the last part, says. "The work has been carried on under the personal supervision of Mr John Hilliams, M. A , late scholar of Trinity College, Oxford [Eng ], who has revised and signed every page to- prees, and who is responsible for the general arrangement of the work, especially na regards matters of style, pronunciation, etc." This dictionary is more nearly allied than are the others, in its system of pronuctation, to the long promused, but still moniplete, "Acut English Dictionary on listorical Principles," which is edited by James A. H. Murray, I.L. D., sometime Pres. dent of the Philological Society, though it is far more simple than the latter in its notation of rounds. The Freeclopadic Dictionary's a in act, esp, is not tie a in en (a) - which is thus given by Walker, Smart, Stormonth, and the Imperial Dictionary - but the a in faither (d), and its a in a-riend', com'ma, is, in distinction from either of the preceding, marked as the obscure a in a-midst, and in this agrees with Swort and Webe'er Unlike Walker, it distinguishes the a in fale from the a lu feres tho e in we from the e in here, the i in pine from the e in sire; the v in go from the o in more, the fi in mult from the u in core More than Smart's or Stormorth's or even the Imperial Dictionary, it revolts from Walter's systematic disregard of etymology in the pronunciation of derivatives and compounds. Thus, instead of Walk or's Diplar-lite, hiro-ism, Platto-nest, thus pronounces bi-partitle, he'ro-ism, Platts nts', the meanings of which are readily understood from their likeness to partitle for part), hiro, and Platto

The diverse systems of notation employed by the orthocousts whose modes of pronunciation are here reported are of necessity represented by that which is used in this Dictionary, and although, as a consequence, the precise shade of sound intends may not in all cases be expressed with minute accuracy, jet it is believed that very for, if eny, important descrepancies will be found to exact. It should be not rehowever, that Stormonth and the Imperial, as well as Walker, ascribe the sound of a in am (our h) to the a in such words as act, syndpa-hy, a-mend', contric, for which this Dictionary has a, that Walker makes no distinction between the e in test (our a) and the c (E) in erd or in-herlit, that Worcester's obscure sounds—so in the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of the defence of t e in ab-delmen, a-mend', li'ar, couriege, e in bri'er, fu'el, i in ru'in; o in cles. confess, u in cure e, depludu, etc - are represented here, as in the resistant this spope is made in 1864, by unmarked vowels; that Smart s apostropie is used? It has pronunciation, as he used it, to mark "the sound as of a partially suppressed of and that the number of words for which two modes of pronunciation are used; counderably increased, for reasons which will be obvious to those who emplify study this Fynorese

IT In this bynopsis, brockets [ ] indicate the pronunciation of kindled names taken to serve in place of the Kynopieral words, when the latter are not found in the
